IU School of Informatics and Computing

Welcome to the IU School of Informatics and Computing!

Moore’s Law says that computing power doubles every 18 months. Regardless of whether that law is literally correct, it illustrates the rapid changes in information technology that will continue for the foreseeable future. The School of Informatics and Computing prepares students to meet the continuing demand for information technology professionals who know how to grow and adapt to this environment of rapid technological change.

Informatics is focused on the best applications of technologies and emphasizes the social and psychological aspects of information technology. Some have called informatics "technology with a human face." Informatics prepares professionals to use information technology to solve problems in a variety of settings. The degrees emphasize the development of new uses for technologies, always keeping in mind the needs of people and the best and most appropriate uses for technology.

Informatics and Computing students have:

- a technical understanding of how computing systems and programs operate
- an ability to adapt/assess and apply new trends in information technology (IT)
- well-developed problem-solving skills
- experience working on a team, such as those formed for the senior capstone experience
- well-developed communications skills to clearly convey solutions and observations to others
- an understanding of social and ethical principles as they relate to IT issues
- the ability to create 3-D animations to help explain surgery to patients
- accelerated drug discovery through information technology
- developed computer applications to manage disaster relief
- explored human interactions with computers, mobile devices, and robots

Informatics is all of this - and so much more. Harnessing the power and possibility of technology, Informatics turns data and information into knowledge that people can use every day. In the world of information and technology, it’s the bridge to all things useful. Informatics is the future.

Degrees from the School of Informatics and Computing are unique because they involve students in learning how information technology relates to a traditional discipline in the sciences, liberal arts, or professions. Students of Informatics learn to solve real problems that directly impact our lives and the lives of those around us. They use their technology and problem solving skills to make a difference in the world. For students interested in a career with infinite potential, Informatics stands out as a strong, flexible and dynamic field of study.

The undergraduate curriculum looks at information technology from a balanced perspective. It includes a technical core in the areas of mathematical foundations, distributed information, human-computer interaction, social/organization informatics, and media arts and science. In addition to knowledge of core informatics and of informatics in the context of a traditional discipline, students must take a set of general-education courses to ensure that they can communicate clearly in both written and spoken English, read effectively, and reason quantitatively. They must be able to raise and rationally debate ethical concerns suggested by information technologies and their interactions with other people. Students also must have some knowledge of the world and its peoples, and their cultural, artistic, and scientific achievements. To this end, the general-education requirement exposes students to the arts and humanities, social and historical studies, and the natural sciences.

Graduate program curricula apply information technology to a specific domain. Graduate students in the School of Informatics and Computing study under faculty who are leaders in the areas of bioinformatics, health informatics, human-computer interaction, library science and media arts and science. Students in the School of Informatics and Computing’s graduate programs also learn from a community of fellow student visionaries, with classmates who come from all over the world and across disciplines to advance informatics research and build life-long careers.

The School of Informatics and Computing offers a variety of educational programs to meet a variety of needs in the evolving world of information technology:

- Bachelor of Science in Informatics degree
- Bachelor of Science in Health Information Administration
- Bachelor and Master of Science degrees in Media Arts and Science
- Master of Library Science - with options for dual degrees in History (M.A.), Philanthropic Studies (M.A.), Health Informatics (M.A.), Law (J.D.) and Public Management (certificate)
- Professional Master of Science degrees in Bioinformatics, Health Informatics and Human-Computer Interaction
- Undergraduate certificates in Informatics, Medical Coding, Legal Informatics and Human-Computer Interaction, and
- Graduate certificates in Human-Computer Interaction, Clinical Informatics, Informatics for Public Health Professionals, Health Information Management and Exchange, Health Information Security and Health Information Systems Architecture.

The School of Informatics and Computing also offers four innovative, accelerated 5-year B.S./M.S. degree programs in the following areas:

- B.S. Informatics + M.S. Bioinformatics
- B.S. Informatics + M.S. Health Informatics
- B.S. Informatics + M.S. Human-Computer Interaction
- B.S. Media Arts & Science + M.S. Human-Computer Interaction

Last Updated: 2/04/2014
Overview

Mission Statement
The mission of the Indiana University School of Informatics and Computing is to excel in education, research, and civic engagement in the field of informatics, an integrative discipline which advances knowledge in

1. computing, information, and media technologies;
2. the implications those technologies have for individuals and society; and
3. their application to any field of study adapting to the challenges of the Information Age.

The School of Informatics and Computing fosters a broad and interdisciplinary view of informatics and uses this view to explore and expand knowledge in informatics education and research. Along with the many schools and departments located on the Indiana University Purdue University urban Indianapolis campus, The School of Informatics and Computing is firmly committed to a welcoming environment, a diverse faculty and student body, and to efforts which support Indiana’s economic development.

Together with The School of Informatics and Computing of Informatics and Computing at IU Bloomington, The School of Informatics and Computing at Indianapolis (IUPUI) aims to lead the nation in creating a new, broad and interdisciplinary view of informatics and uses this viewpoint as the foundation for three foci:

Education and Research
The School of Informatics and Computing’s primary emphasis is in education and research, offering a broad array of B.S., M.S., and Ph.D., programs and a research agenda that emphasizes the breadth of informatics as an interdisciplinary field of study. The School of Informatics and Computing is at the forefront of innovation in education and provides an informatics curriculum which focuses on computing and information technology, while giving equal attention to the complex interactions of technology, individuals, and society. Students of Informatics learn skills which allow them to use computing to solve real human problems in areas such as healthcare, education, poverty, security, and the environment.

Equally important is the fact that Informatics maintains a strong focus on the human use of computing. For example, informatics students build new computing tools and applications while studying how people interact with those technologies and how those technologies shape our relationships, our organizations, and our community. Informatics is a professional school which goes beyond the study of technology in and of itself, to identify, define, and address information problems in a range of disciplines with a variety of technologies and methodologies.

The School of Informatics and Computing also conducts research in a wide range of computing and informatics foundations, applications, and their implications. The School of Informatics and Computing brings a unique perspective that combines information science with a deep understanding of domain-specific areas of research, such as the biological, health, and life sciences, medical and biomedical sciences, cognitive and social sciences, media arts and science, the law and legal domains, business, and human-computer interaction design and usability engineering.

Economic Development and Entrepreneurship
The School of Informatics and Computing is also deeply engaged in the area of economic development and entrepreneurship. In addition to its primary mission in education and research, The School of Informatics and Computing trains well-equipped graduates for a wide range of computing and information technology occupations by placing a special emphasis on:

1. partnering with information technology businesses to address their professional needs in the state of Indiana, and
2. supporting a culture of entrepreneurship for its students, faculty and alumni.

Diversity
The School of Informatics and Computing also fosters an inclusive educational and research culture and environment by:

1. attracting women and under-represented minorities who have a wide range of intellectual interests, talents, and professional goals, and
2. achieving national recognition as an exemplar for diversity.

Graduate Admissions

Graduate Admissions
Applications for all graduate certificate and M.S. programs must be received by March 15 for fall admission and September 15 for spring admission.

Applications for admission to the M.L.S. program must be received by July 15 for fall admission, November 15 for spring admission and by March 15 for summer admission.

Applicants to the Ph.D. program are only eligible for fall admission and must submit applications by January 15.
The Graduate Admissions Committee will not review applications until the application fee and all required materials are completed and received by the deadlines indicated. Specific application details are available at the program/degree links in the left navigation bar.

Bioinformatics

Bioinformatics

Successful applicants to our Master of Science program in Bioinformatics must have a strong background in computing, information technology, and biology. You should be able to demonstrate the skills and knowledge required of the undergraduate Informatics degree.

Promising applicants lacking competencies necessary for admission may be allowed to take courses that will satisfy those requirements, as determined by School of Informatics and Computing faculty. Those courses, however, would not count towards degree or certificate completion.

Prerequisites

- Minimum of a Bachelor’s degree (with demonstrated technical skills)
- Minimum Overall GPA: 3.0 (4.0 point scale)
- Graduate Record Exam (GRE) scores from within the past five years if you are seeking direct financial assistance (such as an assistantship or fellowship) from the School of Informatics and Computing. A GRE score is not required to submit your FAFSA or to seek other federal or private financial assistance opportunities.

Students holding a bachelor's degree in computer science or a related field from an accredited four-year collegiate institution must have completed all or part of the prerequisite courses listed below:

- K322 Genetics and Molecular Biology and K324 Cell Biology or BIOL 507 Molecular Biology

Students holding a bachelor's degree in life sciences or a related field from an accredited four-year collegiate institution must have completed all or part of the prerequisite courses listed below:

- Programming in C, C++, or Java (3 credits)
- Programming/Database (3 credits) (e.g. N510 Web-Database Concepts)
- Statistics (3 credits) (e.g. SPEA K300 or PSY B305)

How to Apply

The Graduate Admissions Committee will not review applications until the application fee and all required materials are completed and received by the deadlines indicated.

Submit a resume, transcripts, a personal statement, and letters of recommendation to:

Graduate Admissions Committee
School of Informatics and Computing 535 W. Michigan Street, IT 475
Indianapolis, IN 46202

1. Complete and submit the IUPUI Graduate Online Application form. Paper applications are not accepted. Choose “M.S. Informatics” and Bioinformatics in the “Academic Interest” section.
2. Submit a resume listing your education, work, research, honors/awards and computer programming experience. This may be attached to your online application or sent separately.
3. Submit a personal statement (visit the IU Writing Center for instructions on how to write such a statement). This may be attached to your online application or sent separately. Your personal statement should indicate the following:
   - Why you’re applying to the program
   - Your post-graduation career plans
4. Submit all official transcripts from previous colleges and universities. NOTE: we do not require transcripts from Indiana University campuses.
5. Submit three references from academic instructors and/or employers. To submit references, you will input contact information for each person on your electronic application. The reference will receive a form via email to fill out and submit electronically.
6. Complete the Graduate Record Examination (GRE) and ensure that IUPUI receives your score report from the GRE exam board (when applying for financial support). The Informatics and Computing school code for the GRE is 1325 – enter this code on the exam’s answer sheets.
7. Submit English language proficiency exam score (International and non-native English speaking students only – see instructions below).
8. Pay your $60 application fee.

Special Instructions for International Students and Non-native English Speakers

If your native language is not English, submit with your application one of the following official test scores from within the past two years:

- Test of English as a Foreign Language (TOEFL): Minimum required scores: 250 for the computer-based test, 600 for the paper test and 79 for the Internet-based test.
• International English Language Testing System (IELTS): Minimum required score of 6.5 or higher

Use IUPUI School Code 1325 to ensure correct routing of your score to IUPUI.

• The TOEFL may be waived if a B.S. or M.S. degree has been earned in the United States
• If you are in the Indianapolis area, placement into G013 or higher on the IUPUI ESL Placement Test may replace the TOEFL requirement for admission. Test registration is arranged by calling 317-274-4240. You must have submitted your application and received a University ID to be eligible to register for this test.
• If you need additional English language study, you may enroll at the ELS Language Centers intensive English program at IUPUI and successfully complete Level 112. We accept successful completion of ELS 112 in place of a TOEFL report.

Health Informatics

Health Informatics
Promising applicants lacking competencies necessary for admission to our Master of Science in Health Informatics program may be allowed to take courses that will satisfy those requirements, as determined by School of Informatics and Computing faculty. Those courses, however, would not count towards degree or certificate completion.

Prerequisites
• Minimum of a Bachelor’s degree in computer science, engineering, biology, biochemistry, nursing, mathematics, statistics, physics, health information administration, or other similar or health-related discipline.
• Successful coursework (or equivalent) in programming (i.e. C, C++, Java or equivalent), databases, medical terminology, human anatomy and physiology.
• Minimum Overall GPA: 3.0 (4.0 point scale)
• Graduate Record Exam (GRE) scores from within the past five years if you are seeking direct financial assistance (such as an assistantship or fellowship) from the School of Informatics and Computing. A GRE score is not required to submit your FAFSA or to seek other federal or private financial assistance opportunities.

How to Apply
The Graduate Admissions Committee will not review applications until the application fee and all required materials are completed and received by the deadlines indicated.

Submit a resume, transcripts, a personal statement, and letters of recommendation to:
Graduate Admissions Committee
School of Informatics and Computing  535 W. Michigan Street, IT 475
Indianapolis, IN 46202

HIT Certificate Graduates

If you have graduated from the HIT certificate within the last year, you may use your previous HIT application materials for the Health Informatics Master’s application or submit new materials. This includes your resume/CV, college transcripts (unless a non-IU updated transcript is necessary), personal statement, and letters of reference. If the online application system will NOT let you submit without listing a reference you can put one reference down and inform that person that they do NOT need to respond. Their lack of response will NOT impede your application. Your file will still be complete with the addition of your previous references. Please inform the Health Informatics academic advisor that you would like to use your HIT application materials for this application. Successful completion of the HIT Certificate program does NOT guarantee admission into the Health Informatics Master’s program.

1. Complete and submit the IUPUI Graduate Online Application form. Paper applications are not accepted. Choose “M.S. Informatics” and Health Informatics in the “Academic Interest” section.
2. Submit a resume listing your education, work, research, honors/awards and computer programming experience. This may be attached to your online application or sent separately.
3. Submit a personal statement (visit the IU Writing Center for instructions on how to write such a statement). This may be attached to your online application or sent separately. Your personal statement should indicate the following:
   • Why you’re applying to the program
   • Your post-graduation career plans
4. Submit all official transcripts from previous colleges and universities. NOTE: we do not require transcripts from Indiana University campuses.
5. Submit three references from academic instructors and/or employers. To submit references, you will input contact information for each person on your electronic application. The reference will receive a form via email to fill out and submit electronically.
6. Complete the Graduate Record Examination (GRE) and ensure that IUPUI receives your score report from the GRE exam board (when applying for financial support). The Informatics and Computing school code for the GRE is 1325 – enter this code on the exam’s answer sheets.
7. Submit English language proficiency exam score (International and non-native English speaking students only – see instructions below).
8. Pay your $60 application fee.

Special Instructions for International Students and Non-native English Speakers
If your native language is not English, submit with your application one of the following official test scores from within the past two years:

• Test of English as a Foreign Language (TOEFL): Minimum required scores: 250 for the computer-based test, 600 for the paper test and 79 for the Internet-based test.
• International English Language Testing System (IELTS): Minimum required score of 6.5 or higher
Use IUPUI School Code 1325 to ensure correct routing of your score to IUPUI.

- The TOEFL may be waived if a B.S. or M.S. degree has been earned in the United States.
- If you are in the Indianapolis area, placement into G013 or higher on the IUPUI ESL Placement Test may replace the TOEFL requirement for admission. Test registration is arranged by calling 317-274-4240. You must have submitted your application and received a University ID to be eligible to register for this test.
- If you need additional English language study, you may enroll at the ELS Language Centers intensive English program at IUPUI and successfully complete Level 112. We accept successful completion of ELS 112 in place of a TOEFL report.

Human-Computer Interaction

Successful applicants to our Master of Science program in Human-Computer Interaction must have a strong background in computing and information technology. You should be able to demonstrate the skills and knowledge required of the undergraduate Informatics degree.

Promising applicants lacking competencies necessary for admission may be allowed to take courses that will satisfy those requirements, as determined by School of Informatics and Computing faculty. Those courses, however, would not count towards degree or certificate completion.

Prerequisites

- Minimum of a Bachelor’s degree (with demonstrated technical skills)
- Minimum Overall GPA: 3.0 (4.0 point scale)
- Graduate Record Exam (GRE) scores from within the past five years if you are seeking direct financial assistance (such as an assistantship or fellowship) from the School of Informatics and Computing. A GRE score is not required to submit your FAFSA or to seek other federal or private financial assistance opportunities.

Successful applicants will have a foundation of core knowledge and skills (from either past education or work experience) in one or more of the following proficiency areas:

- Programming- Proficiency in programming/scripting, including:
  - One or more languages (e.g., HTML, JAVA, C++, and Visual Basic)
  - A basic understanding of programming methodologies, such as system design and architecture, problem and algorithm analysis
  - Other systems knowledge such as artificial intelligence and database analysis/database technology

- Design- Proficiency with the principles and processes of visual communication, industrial design, new media or other disciplines that deal with design theory and practice, including:
  - Knowledge and application of 3D animation and/or modeling tools
  - Design methodologies for 2D and 3D product development
  - Conceptual modeling, prototyping and product delivery
  - Fundamental concepts of visual communication (e.g., page design/layout)
  - Design principles, typography and color theory
  - Knowledge and application of a range of digital (vector and raster) authoring tools for Web or interface design

- Social Sciences- Coursework in the following key areas:
  - Psychology (general, cognitive and behavioral)
  - Sociology and anthropology (ethnography)
  - Cross-cultural psychology and communication
  - Information management and/or Information and library science

How to Apply

The Graduate Admissions Committee will not review applications until the application fee and all required materials are completed and received by the deadlines indicated.

Submit a resume, transcripts, a personal statement, and letters of recommendation to:
Graduate Admissions Committee
School of Informatics and Computing 535 W. Michigan Street, IT 475
Indianapolis, IN 46202

1. Complete and submit the IUPUI Graduate Online Application form. Paper applications are not accepted. Choose “M.S. Informatics” and Human-Computer Interaction in the “Academic Interest” section.
2. Submit a resume listing your education, work, research, honors/awards and computer programming experience. This may be attached to your online application or sent separately.
3. Submit a personal statement (visit the IU Writing Center for instructions on how to write such a statement). This may be attached to your online application or sent separately. Your personal statement should indicate the following:
   - Why you’re applying to the program
   - Your post-graduation career plans
4. Submit all official transcripts from previous colleges and universities. NOTE: we do not require transcripts from Indiana University campuses.
5. Submit three references from academic instructors and/or employers. To submit references, you will input contact information for each person on your electronic application. The reference will receive a form via email to fill out and submit electronically.
6. Complete the Graduate Record Examination (GRE) and ensure that IUPUI receives your score report from the GRE exam board (when applying for financial support). The Informatics and Computing school code for the GRE is 1325 – enter this code on the exam’s answer sheets.
7. Submit English language proficiency exam score (International and non-native English speaking students only – see instructions below).
8. Pay your $60 application fee.

Special Instructions for International Students and Non-native English Speakers
If your native language is not English, submit with your application one of the following official test scores from within the past two years:

- Test of English as a Foreign Language (TOEFL): Minimum required scores: 250 for the computer-based test, 600 for the paper test and 79 for the Internet-based test.
- International English Language Testing System (IELTS): Minimum required score of 6.5 or higher

Use IUPUI School Code 1325 to ensure correct routing of your score to IUPUI.

- The TOEFL may be waived if a B.S. or M.S. degree has been earned in the United States
- If you are in the Indianapolis area, placement into G013 or higher on the IUPUI ESL Placement Test may replace the TOEFL requirement for admission. Test registration is arranged by calling 317-274-4240. You must have submitted your application and received a University ID to be eligible to register for this test.
- If you need additional English language study, you may enroll at the ELS Language Centers intensive English program at IUPUI and successfully complete Level 112. We accept successful completion of ELS Level 112 in place of a TOEFL report.

Library Science (M.L.S.)

Library Science (M.L.S.)

The Department of Library and Information Science welcomes applications to our Masters of Library Science program from individuals interested in entering the library and information professions. Applicants to the Indianapolis program bring a range of backgrounds to their graduate education, through both their prior education and work experience. Applications from those who have been in the work force and from recent graduates are equally desirable.

Admission Requirements

Bachelor’s Degree Students holding a bachelor’s degree from regionally accredited four-year collegiate institutions are eligible to apply for admission. Applicants in the final year of their undergraduate program may apply and be granted admission conditional upon being awarded the bachelor’s degree.

An applicant must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale or its equivalent in the total undergraduate program, or an average of 3.2 in the latest graduate degree or representative graduate hours (usually 30 semester hours) completed.

If the applicant does not meet the minimum undergraduate (or graduate) GPA requirements, he or she must submit Graduate Record Exam scores.

GRE Revised Test (Nov. 2011) – Initial GRE scoring conversion charts are available. These charts may be updated as more student test data is collected by the GRE board.

LIS looks at the whole application in making an admissions decision. The following scores will be considered to have met the minimum required – V: 153, Q: 144, and AW (not decided at this time).

See GRE Score Interpretation.

- GRE – IU Institutional Code: 1324
- GRE – Library Science Code: 4701

How to Apply

The Graduate Admissions Committee will not review applications until the application fee and all required materials are completed and received by the deadlines indicated.

Have transcripts sent directly to:

Department of Library and Information Science
Indiana University School of Informatics and Computing
535 West Michigan Street, IT 475
Indianapolis, IN 46202

1. Complete and submit the IUPUI Graduate Online Application form. Paper applications are not accepted.
2. Submit a 750 – 1500 word personal statement. Your personal statement should indicate the following:
   - In what manner do you see yourself as a future library/information leader in your future organization and community?
   - What examples can you provide that illustrate how you work as a constructive member of a team to solve problems?
   - Provide your perspective on or experiences with technology in information services.
3. Submit official transcripts from all post-secondary colleges and universities (graduate and undergraduate), except for Indiana University campuses.
4. Submit three references from academic instructors and/or employers. To submit references, you will input contact information for each person on your electronic application. The reference will receive a form via email to fill out and submit electronically.
5. If necessary, complete the Graduate Record Examination (GRE) and ensure that IUPUI receives your score report. The IUPUI and MLS program codes are listed above. The Informatics and Computing school code for the GRE is 1325 – enter this code on the exam’s answer sheets.
6. For international and non-native English speaking students, submit English language proficiency exam score (see below).
7. Pay your $60 application fee.

Special Instructions for International Students and Non-native English Speakers

Graduate applicants are expected to have completed the equivalent of a U.S. Bachelor’s degree in order to be considered for graduate study, such as:

1. Have completed at least 16 years of primary +secondary+tertiary education and have earned a university first degree, or
2. Have completed a university first degree that grants eligibility for graduate study in a recognized university in that same country.

Persons without this background cannot be accepted for graduate study, regardless of the name of any first degree they may hold.

Once minimum eligibility is determined, Indiana University graduate programs will make the final admissions decision, based on reviewing the applicant’s educational credentials to determine if the applicant is academically competitive and has the preparation needed for success in that program. The Office of International Affairs at IUPUI will provide evaluations of the applicant’s educational background and academic documents upon request from the departments.

International applicants must submit both GRE and TOEFL (Test of English as a Foreign Language) scores. To gain admission, international applicants must earn minimum scores in the table below.

TOEFL and GRE details:

- TOEFL – TOEFL minimum 600 (Paper test) or 250 (Computer test) or 100 (new test Fall 2005)
- TOEFL – IU Institutional Code: 1325;

International applicants must comply with the deadline dates indicated in Office of International Affairs Web site at www.iupui.edu/~oia.

**Ph.D. Programs**

**Ph.D. Programs Admission**

Applicants to the Ph.D. program are only eligible for fall admission and must submit applications by January 15.

The Graduate Admissions Committee will not review applications until the application fee and all required materials are completed and received by the deadlines indicated. Specific application details are available at the program/degree links in the left navigation bar.

Last updated: 02/11/2014

**Bioinformatics**

Successful applicants to our Ph.D. program in Bioinformatics must have a strong background in computing, information technology, and biology. You should be able to demonstrate the skills and knowledge required of the undergraduate Informatics degree.

Promising applicants lacking competencies necessary for admission may be allowed to take courses that will satisfy those requirements, as determined by School of Informatics and Computing faculty. Those courses, however, would not count towards degree or certificate completion.

**Prerequisites**

- Minimum of a Bachelor’s degree (with demonstrated technical skills)
- Minimum Overall GPA: 3.0 (4.0 point scale)

- Graduate Record Exam (GRE) scores from within the past five years.

Students holding a bachelor’s degree in computer science or a related field from an accredited four-year collegiate institution must have completed all or part of the prerequisite courses listed below:

- K322 Genetics and Molecular Biology and K324 Cell Biology or BIOL 507 Molecular Biology

Students holding a bachelor’s degree in life sciences or a related field from an accredited four-year collegiate institution must have completed all or part of the prerequisite courses listed below:

- Programming in C, C++, or Java (3 credits)
- Programming/Database (3 credits) (e.g. N510 Web-Database Concepts)
- Statistics (3 credits) (e.g. SPEA K300 or PSY B305)

**How to Apply**

The Graduate Admissions Committee will not review applications until the application fee and all required materials are completed and received by the deadlines indicated.

Submit a resume, transcripts, a personal statement, and letters of recommendation to:

Graduate Admissions Committee
School of Informatics and Computing 535 W. Michigan Street, IT 475
Indianapolis, IN 46202

1. Complete and submit the IUPUI Graduate Online Application form. Paper applications are not accepted. Choose “Ph.D. Informatics” and “Informatics” in the “Academic Interest” section. Be sure to indicate on your personal statement your intended area of specialization.

2. Submit a resume listing your education, work, research, honors/awards and computer programming experience. This may be attached to your online application or sent separately.

3. Submit a personal statement (visit the IU Writing Center for instructions on how to write such a statement). This may be attached to your online application or sent separately. Your personal statement should indicate the following:
   - Why you’re applying to the program
   - Your post-graduation career plans
   - Your intended area of specialization

4. Submit all official transcripts from previous colleges and universities. **NOTE: we do not require transcripts from Indiana University campuses.**

5. Submit three references from academic instructors and/or employers. To submit references, you will input contact information for each person on your electronic application. The reference will receive a form via email to fill out and submit electronically.

6. Complete the Graduate Record Examination (GRE) and ensure that IUPUI receives your score report from the GRE exam board. The Informatics and Computing school code for the GRE is 1325 – enter this code on the exam’s answer sheets.
7. Submit English language proficiency exam score (International and non-native English speaking students only – see instructions below).

8. Pay your $60 application fee.

Special Instructions for International Students and Non-native English Speakers

If your native language is not English, submit with your application one of the following official test scores from within the past two years:

- Test of English as a Foreign Language (TOEFL): Minimum required scores: 250 for the computer-based test, 600 for the paper test and 79 for the Internet-based test.
- International English Language Testing System (IELTS): Minimum required score of 6.5 or higher

Use IUPUI School Code 1325 to ensure correct routing of your score to IUPUI.

- The TOEFL may be waived if a B.S. or M.S. degree has been earned in the United States
- If you are in the Indianapolis area, placement into G013 or higher on the IUPUI ESL Placement Test may replace the TOEFL requirement for admission. Test registration is arranged by calling 317-274-4240. You must have submitted your application and received a University ID to be eligible to register for this test.
- If you need additional English language study, you may enroll at the ELS Language Centers intensive English program at IUPUI and successfully complete Level 112. We accept successful completion of ELS 112 in place of a TOEFL report.

Last updated: 02/11/2014

Health Informatics

Health Informatics

Promising applicants to the Ph.D. in Health Informatics program lacking competencies necessary for admission may be allowed to take courses that will satisfy those requirements, as determined by School of Informatics and Computing faculty. Those courses, however, would not count towards degree or certificate completion.

Prerequisites

- Minimum of a Bachelor's degree in computer science, engineering, biology, biochemistry, nursing, mathematics, statistics, physics, health information administration, or other similar or health-related discipline.
- Successful coursework (or equivalent) in programming (i.e. C, C++, Java or equivalent), databases, medical terminology, human anatomy and physiology.
- Minimum Overall GPA: 3.0 (4.0 point scale)
- Graduate Record Exam (GRE) scores from within the past five years.

How to Apply

The Graduate Admissions Committee will not review applications until the application fee and all required materials are completed and received by the deadlines indicated.

Submit a resume, transcripts, a personal statement, and letters of recommendation to:

Graduate Admissions Committee
School of Informatics and Computing 535 W. Michigan Street, IT 475
Indianapolis, IN 46202

1. Complete and submit the IUPUI Graduate Online Application form. Paper applications are not accepted. Choose “Ph.D. Informatics” and “Informatics” in the “Academic Interest” section. Be sure to indicate on your personal statement your intended area of specialization.

2. Submit a resume listing your education, work, research, honors/awards and computer programming experience. This may be attached to your online application or sent separately.

3. Submit a personal statement (visit the IU Writing Center for instructions on how to write such a statement). This may be attached to your online application or sent separately. Your personal statement should indicate the following:
- Why you’re applying to the program
- Your post-graduation career plans
- Your intended area of specialization

Human-Computer Interaction

Successful applicants to our Ph.D. program in Human-Computer Interaction must have a strong background in computing and information technology. You should be able to demonstrate the skills and knowledge required of the undergraduate Informatics degree.

Promising applicants lacking competencies necessary for admission may be allowed to take courses that will satisfy those requirements, as determined by School of Informatics and Computing faculty. Those courses, however, would not count towards degree or certificate completion.

Prerequisites

- Minimum of a Bachelor’s degree (with demonstrated technical skills)
- Minimum Overall GPA: 3.0 (4.0 point scale)
- Graduate Record Exam (GRE) scores from within the past five years if you are seeking direct financial assistance (such as an assistantship or fellowship) from the School of Informatics and Computing. A GRE score is not required to submit your FAFSA or to seek other federal or private financial assistance opportunities.

Successful applicants will have a foundation of core knowledge and skills (from either past education or work experience) in one or more of the following proficiency areas:

- **Programming**- Proficiency in programming/scripting, including:
  - One or more languages (e.g., HTML, JAVA, C++ and Visual Basic)
  - A basic understanding of programming methodologies, such as system design and architecture, problem and algorithm analysis
  - Other systems knowledge such as artificial intelligence and database analysis/database technology

- **Design**- Proficiency with the principles and processes of visual communication, industrial design, new media or other disciplines that deal with design theory and practice, including:
  - Knowledge and application of 3D animation and/or modeling tools
  - Design methodologies for 2D and 3D product development
  - Conceptual modeling, prototyping and product delivery
  - Fundamental concepts of visual communication (e.g., page design/layout)
  - Design principles, typography and color theory

- Knowledge and application of a range of digital (vector and raster) authoring tools for Web or interface design

- **Social Sciences**- Coursework in the following key areas:
  - Psychology (general, cognitive and behavioral)
  - Sociology and anthropology (ethnography)
  - Cross-cultural psychology and communication
  - Information management and/or Information and library science

How to Apply

The Graduate Admissions Committee will not review applications until the application fee and all required materials are completed and received by the deadlines indicated.

Submit a resume, transcripts, a personal statement, and letters of recommendation to:

Graduate Admissions Committee
School of Informatics and Computing 535 W. Michigan Street, IT 475 Indianapolis, IN 46202

1. Complete and submit the [IUPUI Graduate Online Application](#) form. Paper applications are not accepted. Choose “Ph.D. Informatics” and “Informatics” in the “Academic Interest” section. Be sure to indicate on your personal statement your intended area of specialization.

2. Submit a resume listing your education, work, research, honors/awards and computer programming experience. This may be attached to your online application or sent separately.

3. Submit a personal statement (visit the [IU Writing Center](#) for instructions on how to write such a statement). This may be attached to your online application or sent separately. Your personal statement should indicate the following:
   - Why you’re applying to the program
   - Your post-graduation career plans
   - Your intended area of specialization

4. Submit all official transcripts from previous colleges and universities. **NOTE: we do not require transcripts from Indiana University campuses.**

5. Submit three references from academic instructors and/or employers. To submit references, you will input contact information for each person on your electronic application. The reference will receive a form via email to fill out and submit electronically.

6. Complete the Graduate Record Examination (GRE) and ensure that IUPUI receives your score report from the GRE exam board. The Informatics and Computing school code for the GRE is 1325 – enter this code on the exam’s answer sheets.

7. Submit English language proficiency exam score (International and non-native English speaking students only – see instructions below).

8. Pay your $60 application fee.

Special Instructions for International Students and Non-native English Speakers

- Information management and/or Information and library science
- Knowledge and application of a range of digital (vector and raster) authoring tools for Web or interface design
- Social Sciences—Coursework in the following key areas:
  - Psychology (general, cognitive and behavioral)
  - Sociology and anthropology (ethnography)
  - Cross-cultural psychology and communication
  - Information management and/or Information and library science
If your native language is not English, submit with your application one of the following official test scores from within the past two years:

- Test of English as a Foreign Language (TOEFL): Minimum required scores: 250 for the computer-based test, 600 for the paper test and 79 for the Internet-based test.
- International English Language Testing System (IELTS): Minimum required score of 6.5 or higher

Use IUPUI School Code 1325 to ensure correct routing of your score to IUPUI.

- The TOEFL may be waived if a B.S. or M.S. degree has been earned in the United States
- If you are in the Indianapolis area, placement into G013 or higher on the IUPUI ESL Placement Test may replace the TOEFL requirement for admission. Test registration is arranged by calling 317-274-4240. You must have submitted your application and received a University ID to be eligible to register for this test.
- If you need additional English language study, you may enroll at the ELS Language Centers intensive English program at IUPUI and successfully complete Level 112. We accept successful completion of ELS 112 in place of a TOEFL report.

Admission

Undergraduate Admissions
We want to do everything we can to make becoming part of the School of Informatics and Computing family as simple and convenient as possible. Please choose the category below that applies to you to learn more about the admissions process.

- High School or First-time College Students
- Transfer Students
- Returning Students
- International Students
- Current IUPUI Students
- Health Information Administration Professional Program Applicants (current IUPUI students only)

Deadlines for undergraduate admission applications can be found at IUPUI's Office of Undergraduate Admissions.

Graduate Admissions
Applications for all graduate certificate and M.S. programs must be received by March 15 for fall admission and September 15 for spring admission.

Applications for admission to the M.L.S. program must be received by July 15 for fall admission, November 15 for spring admission and by March 15 for summer admission.

Applicants to the Ph.D. program are only eligible for fall admission and must submit applications by January 15.

The Graduate Admissions Committee will not review applications until the application fee and all required materials are completed and received by the deadlines indicated. Specific application details for each graduate program are available in the links located on the left navigation bar.

Last updated: 02/13/2014

Admission

How to Apply: Transfer Students
So you want to transfer to IUPUI and the School of Informatics and Computing? We have to say, you've made an excellent choice!

The IUPUI Office of Admissions’ Transfer Central will tell you all you need to know.

- If you are transferring from another campus of Indiana University, please review the intercampus transfer process.
- If you are transferring from a college or university other than Indiana University, follow these important instructions.
- If you are an IUPUI student wishing to change majors, please see the current IUPUI Students page.

TransferIN is a good source to determine how your credits may transfer to IUPUI from other Indiana schools, or you may contact one of our advisors. If transferring from an out-of-state school, IUPUI recommends u.select. And don’t forget to review IUPUI’s Transfer Credit Policy.

Transfer Student Information Sessions
We strongly encourage any prospective transfer students from ANY undergraduate program/school (including IUPUI) to attend one of our regularly scheduled transfer student information sessions. Our advisors will provide a comprehensive overview of the transfer process for the School of Informatics and Computing, including how your existing credits fit into our program curricula and what courses we recommend you take in future semesters.

Check out our undergraduate “Visit Us” page for upcoming dates and to sign up.

Requirements
Your application will be evaluated by the IUPUI Office of Admissions according to IUPUI’s transfer admission requirements. It will then be forwarded to the School of Informatics and Computing for review, at which point one of our advisors will contact you for a consultation and recommendations.

Last updated: 02/13/2014

Admission

How to Apply: Returning Students
Welcome home! No matter how long you’ve been away, it’s never too late to finish your education.

If less than two semesters have passed since you left (with the exception of summer terms), please contact your academic advisor.

If you haven't enrolled in IUPUI courses for one year or more, you will need to reapply (admission fee waived) through the IUPUI Office of Admissions.

If you are a previous student of the School of Informatics and Computing applying for readmission, please be aware of potential curricula changes. If you’ve been gone less than two years, you will return to your original program
curriculum. If it’s been two or more years, you will be readmitted under the current curriculum.

Returning students new to the School of Informatics and Computing are invited to apply for admission.

Requirements
Returning students are assessed on a case-by-case basis depending upon past credits, transcripts and desired course of study. If you’ve been away from IUPUI for two or more semesters, we encourage you to complete the reapplication process so that your situation can be reviewed by the IUPUI Office of Admissions and the School of Informatics and Computing.

Admission

How to Apply: International Students
International students wishing to enroll at the School of Informatics and Computing must first apply through the Office of International Affairs. Further information about international admissions, including details about the many scholarships available to international students, are available through the Office of International Affairs. They offer a wealth of information in multiple languages, including Spanish, Portuguese, Arabic and Chinese.

Requirements
The Office of International Affairs maintains its own requirements for international students seeking admission to IUPUI. Please visit their site to review those requirements, including English proficiency standards and what academic records and immigration documentation you will need to provide.

Admission

How to Apply: High School and First-Time College Students
You’ll actually apply for admission online through the IUPUI Office of Admissions. We encourage you to apply for direct admission, which allows you to enter IUPUI as a School of Informatics and Computing student your very first semester. To pursue direct admission, you must list your intended major (B.S. in Media Arts and Science, Informatics or Health Information Administration) or certificates (Medical Coding, Legal Informatics, Human Computer Interaction) on your IUPUI admissions application and meet eligibility criteria.

Another option is to start in IUPUI’s University College, where you’ll begin taking courses, declare your major and then certify into the School of Informatics and Computing early in your college career. But that doesn’t stop you from immediately joining one of our student groups, meeting with our advisors and becoming part of the informatics community.

Visit IUPUI’s Office of Admissions to begin your application or check your admission status.

Requirements
Please make sure to review IUPUI’s admission requirements through the Office of Admissions. For direct admission, we’re looking for students with:

- Competitive grades and class rank
- Strong SAT or ACT scores
- Commitment to a career in computing and information technology

To certify into the School of Informatics and Computing from University College, you will need to have achieved the following:

- 2.0 GPA
- 12 credits of completed coursework

Admission

How to Apply: Current IUPUI Students
If you are an IUPUI student not currently enrolled in the School of Informatics and Computing, but would like to pursue a Media Arts and Science, Informatics or Health Information Administration degree, please schedule an appointment to speak with one of our advisors who can help evaluate your situation and guide you through the process.

Current School of Informatics and Computing Students
If you would like to change your major within the School of Informatics and Computing, please schedule a time to meet with your advisor to discuss your options.

Admission

How to Apply: B.S. Health Information Administration Admissions
Students may begin the HIA Professional Program in either the fall or spring semester. Students must have all of their pre-requisite courses completed prior to starting the professional program and apply during the semester prior to their anticipated start date. Completed applications should be emailed directly to the Academic Advisor, Julie Reagan at jdreagan@iupui.edu.

Admissions Requirements and Standards
Completion of all required prerequisite courses with a grade of C or higher (C- grades are not acceptable). A minimum IU cumulative GPA of 2.5 or higher is needed. You may complete the “Petition for Exceptional Consideration” found on the HIA application if you do not meet this requirement but still feel equipped to succeed in the HIA program. Students who seek exceptional consideration may be asked to schedule an interview. You will be contacted if this is necessary.

Note: Students looking to begin work towards the Health Information Administration degree and who have not yet been admitted to IUPUI or the School of Informatics and Computing should choose the appropriate category from the menu provided here to find out how to apply.

Note for transfer students: Transfer students who have completed HIA professional program prerequisites through another institution must first apply and be admitted to IUPUI before being considered for admission in the professional program.

Undergraduate Certificate Programs

Undergraduate Certificate Programs
Prior to each semester’s enrollment, a faculty member or an academic advisor provides academic counseling for each student in the School of Informatics and Computing. Although academic counseling is intended to provide effective guidance, students are responsible for planning their own programs and for meeting the following degree requirements for graduation.

Students are advised to read bulletin descriptions of all courses selected, paying careful attention to conditions concerning awarding of credit.

The School of Informatics and Computing offers the following undergraduate certificates:

• Informatics
• Medical Coding
• Human-Computer Interaction
• Legal Informatics

Informatics Certificate

The undergraduate Informatics Certificate is a 27-credit-hour program allowing a student majoring in another subject to become certified in the application of informatics tools and principles to that subject area.

Students must earn a C- or higher in each individual course as well as a cumulative grade point average of a 2.0 or higher in order to graduate.

Courses (24 cr.)

- INFO I101 Introduction to Informatics (4 cr.)
- INFO I202 Social Informatics (3 cr.)
- INFO I210 Information Infrastructure I (4 cr.)
- INFO I211 Information Infrastructure II (4 cr.)
- INFO I300 Human-Computer Interaction (3 cr.)
- INFO I303 Organizational Informatics (3 cr.)
- INFO I308 Information Representation (3 cr.)

Note: courses marked in bold can be counted towards a student’s general education requirement.

Elective (3 cr.)

An additional course from the undergraduate Informatics degree program curriculum must be completed. Or you may choose any course from that same program’s list of approved electives, including approved courses outside the School of Informatics and Computing.

Medical Coding Certificate

The Medical Coding Certificate is a 26-credit-hour program focusing on pathophysiology, pharmacology, coding, medical reimbursement and basic concepts of health information and is designed to better prepare you to sit for industry standard certifications.

The curriculum includes a unique professional practicum component that integrates classroom instruction with applied, technical experience in an actual healthcare facility.

The program begins each fall. Courses may be taken part-time or full-time, and all courses may be completed via distance education (with the exception of the professional practicum).

Credit earned for the certificate may be applied toward a bachelor’s degree in Health Information Administration (application and acceptance into the HIA program required). Graduates are also eligible to seek the Certified Coding Associate (CCA) credential offered by the American Health Information Management Association (AHIMA).

Admission and Requirements

Prospective students must first be admitted to IUPUI as an undergraduate student. You must also acquire knowledge of anatomy, physiology and database design through the completion of designated prerequisites with a minimum grade of C (2.0). Students must achieve a minimum cumulative G.P.A. of 2.5 to begin courses.

Prerequisites (14-16 cr.)

- BIOL N261 Human Anatomy (5 cr.) and BIOL N217 Human Physiology (5 cr.)
- BIOL N212/213 Human Biology I (4 cr.) and BIOL N214/215 Human Biology II (4 cr.)
- HIA M110 Computer Concepts for Health Information (3 cr.)
- HIA M330 Medical Terminology (3 cr.)

*** BIOL-N 213 and BIOL-N 215 labs are optional

Required Courses (26 cr.)

- HIA M325 Healthcare Information Requirements and Standards (3 cr.)
- HIA M326 Lab for HIA M325 (1 cr.)
- HIA M350 Medical Science for Health Information I (3 cr.)
- HIA M355 ICD-9-CM Coding (3 cr.)
- HIA M356 Lab for HIA M355 (1 cr.)
- HIA M450 Medical Science for Health Information II (3 cr.)
- HIA M455 CPT Coding (3 cr.)
- HIA M456 Lab for HIA M455 (1 cr.)
- HIA M461 Release of Information (1 cr.)
- HIA M470 Healthcare Reimbursement Systems (3 cr.)
- HIA M457 Professional Practice in Medical Coding I (4 cr.)

Human-Computer Interaction Certificate

Human-Computer Interaction Certificate

If you have an interest in how people interact with technology or computers, or you like design, psychology, sociology, or any number of additional fields that HCI intersects with, HCI could be a good fit.

HCI is the branch of informatics that studies and supports the design, development, and implementation of humanly usable and socially acceptable information technologies.
Because human–computer interaction studies a human and a machine in conjunction, it draws from supporting knowledge on both the machine and the human side. On the machine side, techniques in computer graphics, operating systems, programming languages, and development environments are relevant. On the human side, communication theory, graphic and industrial design disciplines, linguistics, social sciences, cognitive psychology, and human factors such as computer user satisfaction are relevant.

Due to the multidisciplinary nature of HCI, people with different backgrounds contribute to its success.

Certificate Requirements
The Undergraduate Certificate in Human-Computer Interaction (HCI) is a 15-credit-hour program allowing students to become certified in the fundamental theory and application of human-computer interaction. Students can seek this certificate in addition to their major or as a stand-alone certificate.

- INFO I270 Introduction to HCI Principles & Practices
- INFO I275 Introduction to HCI Theory
- INFO I300 Human-Computer Interaction
- INFO I480 Experience Design and Evaluation of Ubiquitous Computing
- NEWM N450 Usability Principles for New Media Interfaces

Note: courses marked in bold can be counted towards a student’s general education requirement.

Last updated: 02/14/2014

Legal Informatics Certificate

Legal Informatics Certificate
Legal Informatics has been described as “the study of the application of information technologies to the field of law and the use of these technologies by legal professionals.” Therefore, the focus of the Certificate in Legal Informatics is on the effective use of cutting-edge technology in the study and practice of law. Legal informatics also includes the law related to technology, such as intellectual property law, and security. All of the courses for the Certificate in Legal Informatics are offered online.

Certificate Requirements
The following five (5) courses comprise the Certificate in Legal Informatics, for a total of 15 credit hours:

- INFO I330 Legal and Social Informatics of Security (3 cr.)
- INFO I350 Foundations in Legal Informatics (3 cr.)
- INFO I410 Electronic Discovery (3 cr.)
- INFO I470 Litigation Support Systems and Courtroom Presentation (3 cr.)
- NEWM N480 Technology and the Law (3 cr.)

Students who complete all five courses as part of their undergraduate degree will earn a Certificate in Legal Informatics. Students can also earn the Certificate in Legal Informatics as a free-standing certificate. Students must earn a C or higher in all five courses in order to qualify for the Certificate in Legal Informatics.

For additional information, please contact Professor Sara Anne Hook.

Undergraduate Programs

Undergraduate Degree Programs
Prior to each semester’s enrollment, a faculty member or an academic advisor provides academic counseling for each student in the School of Informatics and Computing. Although academic counseling is intended to provide effective guidance, students are responsible for planning their own programs and for meeting the following degree requirements for graduation.

Students are advised to read bulletin descriptions of all courses selected, paying careful attention to conditions concerning awarding of credit.

The School of Informatics and Computing offers the following undergraduate degrees:

- Health Information Administration
- Informatics
- Media Arts and Science

Five Year Bachelor’s and Master’s Program

Five Year Bachelor’s and Master’s Program
A fast track to future success

Earn both a bachelor’s and master’s in five years and get an accelerated start to your future career

- B.S. Informatics + M.S. Bioinformatics
- B.S. Informatics + M.S. Health Informatics
- B.S. Informatics + M.S. Human-Computer Interaction
- B.S. Media Arts & Science + M.S. Human-Computer Interaction

Informatics and computing professionals are in constant demand within an ever-evolving and growing field. As a result, employers are seeking graduates with the highest qualifications and skill sets to emerge as tomorrow’s technology leaders. With these needs in mind, the IU School of Informatics and Computing at IUPUI offers four, five-year BS+MS degree programs for top-achieving and motivated students.

These forward-thinking programs combine our very best degree offerings in an accelerated format designed to prepare highly-skilled, marketable and successful graduates. Alumni of our BS+MS programs will be well-equipped not only for success in the computing and information technology fields, but also the healthcare, science, business, interactive media and design industries, among others. Key benefits of our five-year BS +MS degree programs include:

- Save time and tuition
- Stand out in the job market with advanced skills and education
- Increased lifetime earning potential

Programs and Degrees
B.S. Informatics
Use your passion for making a difference through computing to develop high-tech, innovative solutions that change how people use and access information and technology. Informatics is for big picture thinkers who can go beyond just hardware and software to uniquely integrate principles of information systems and design, computing, psychology and sociology. Specialize your education and career path with master’s degree in one of the following programs:

- **M.S. Health Informatics:**
  Focus your career on the dynamic field of healthcare systems and information technologies. Health Informatics professionals analyze and protect patient data, increase healthcare efficiencies, transform clinical systems, help shape policies and produce higher quality patient care.

- **M.S. Bioinformatics:**
  Combine informatics and computing with biology and genetics to make an important impact on science, research and medicine. Bioinformaticists utilize computational languages and mathematics to collect and analyze biological data towards the discovery of new advances in health and medicine.

- **M.S. Human-Computer Interaction:**
  Apply the latest research and principles of design, psychology, business, engineering and computing to create innovative and user-friendly technology. Human-Computer Interaction centers on the user experience to create new software designs, interactive applications and other technologies that are intuitive, functional and easy to use.

### B.S. Media Arts & Science + M.S. Human-Computer Interaction
Empower your creativity and love of technology to develop and design interactive technologies, software, applications, graphics and other media arts that integrate best practices in usability and user-design. Build a career-launching portfolio that includes dynamic websites and apps, games and software, cutting-edge video and audio, and 3D animations.

B.S. in Health Information Administration - Plan of Study

B.S. in Health Information Administration - Plan of Study

Below is the plan of study for students beginning in the fall of 2013. Students who began prior to the fall of 2013 should review their plan of study found on the top right hand side of this page. Students are responsible for completing the degree requirements for their particular plan of study. Transfer students should consult a School of Informatics and Computing academic advisor regarding potential course exceptions and/or substitutions. We encourage all students to meet with an academic advisor prior to registration each semester.

The HIA degree consists of 120 credit hours. All courses must be completed with a C or better to count towards degree completion. The professional program may be completed fully online and students may start the professional program in either the fall or spring semester.

### Pre-HIA Core (62 cr.)

HIA Pre-requisite Requirements (29 cr.)

- INFO I100 First Year Experience (1 cr.)
- HIA M110 Computer Concepts for Health Information (3 cr.)
- HIA M210 Data Organization & Presentation in Healthcare Environment (3 cr.)
- HIA M300 Database Design for HIA (3 cr.)
- HIA M220 Healthcare Decision Support (3 cr.)
- BUS X100 Intro to Business Administration (3 cr.)
- BUS L203 Commercial Law (3 cr.)
- HIA M270 Foundations & Principles of Health Information Management (2 cr.)
- HIA M330 Medical Terminology (3 cr.)
- HIA M275 Effective Communication for the Healthcare Environment (3 cr.)
- NEWM N299 Directed Study (2 cr.)

NOTE: BIOL N212 Human Biology 1 (3 cr.) and BIOL N214 Human Biology 2 (3 cr.) are required but may be applied under the Life and Physical Sciences General Education Core requirements below. The BIOL N213 and BIOL N215 labs are OPTIONAL.
General Education Core Requirements (30 cr.)

Foundational Intellectual Skills
Students must take 15 credit hours related to Foundational Intellectual Skills. This includes 6 credits related to Core Communication skills, 6 credits in Analytical Reasoning, and 3 credits related to Cultural Understanding. The most recent list of approved classes can be found here: http://go.iupui.edu/gened.

Intellectual Breadth and Adaptiveness
Students must also take 15 credit hours related to Intellectual Breadth and Adaptiveness. This helps to foster the “ways of knowing” that are characteristic of particular fields ranging from science and the social sciences through humanities and arts. This includes 6 credits in the Life and Physical Sciences, and 9 credits distributed across the Arts/Humanities and the Social Sciences. The most recent list of approved classes can be found here: http://go.iupui.edu/gened.

General Electives (3 cr.)
The School of Informatics and Computing will not accept physical education activity courses, musical instrument or voice lesson courses towards elective credit. Students may use any other college level course credit (transferable to IUPUI) towards electives.

Notes:
- This plan of study is subject to revision. Please consult a HIA academic advisor each semester prior to registration.
- The pre-requisite courses total 62 credit hours and must be successfully completed prior to beginning the HIA Professional Program.
- Prerequisite courses must be completed prior to taking the stated course.
- All courses require a minimum grade of a C to be considered as successfully completed and to apply towards graduation.

Professional Program (58 cr.)
Professional program courses are open only to those junior and senior-level students who have successfully completed all pre-Health Information Administration courses and have received a letter of acceptance to the program.

Professional core courses are sequential and must be completed in the order specified during the third and fourth years of study.

First Fall Semester (14 cr.)
- HIA M325 Healthcare Information Requirements and Standards I (3 cr.)
- HIA M326 Lab for M325 (1 cr.)
- HIA M350 Medical Science for Health Information I (3 cr.)
- HIA M355 ICD-9-CM Coding (3 cr.)
- HIA M356 Lab for M355 (1 cr.)
- HIA M370 Health Information Management (3 cr.)

First Spring Semester (16 cr.)
- HIA M322 Hospital Organization and Management (3 cr.)
- HIA M327 Healthcare Information Requirements and Standards II (3 cr.)
- HIA M328 Lab for HIA M327 (1 cr.)
- HIA M445 Medicine and the Law (1 cr.)
- HIA M450 Medical Science for Health Information II (3 cr.)
- HIA M455 CPT Coding (3 cr.)
- HIA M456 Lab for M455 (1 cr.)
- HIA M461 Release of Information (1 cr.)

Second Fall Semester (14 cr.)
- HIA M315 Quantitative Methods and Research (2 cr.)
- HIA M375 Health Information Technology (3 cr.)
- HIA M420 Healthcare Planning and Information Systems (3 cr.)
- HIA M443 Professional Practicum in Health Information Administration I (4 cr.)
- HIA M462 Healthcare Quality Improvement (2 cr.)

Second Spring Semester (14 cr.)
- HIA M400 Health Information Storage/Retrieval (3 cr.)
- HIA M444 Professional Practicum in Health Information Administration II (4 cr.)
- HIA M470 Healthcare Reimbursement Systems (3 cr.)
- HIA M490 Directed Study (1 cr.)
- HIA M499 Health Information Administration Capstone Experience (3 cr.)

Notes:
- This plan of study is subject to revision. Please consult a HIA academic advisor each semester prior to registration.
- All courses require a minimum grade of a C to be considered as successfully completed and to apply towards graduation.
- The HIA Bachelor of Science degree in total equals 120 credit hours.
- The Professional Program courses total 58 credit hours and may be fully completed via online education on a full time or part time basis.

Last updated: 02/14/2014

Bachelor of Science in Informatics

Bachelor of Science in Informatics

Getting Started
To pursue a degree in Informatics, you must first apply and be accepted to IUPUI.

You’ll then want to schedule time with one of our undergraduate advisors to review your plan of study and get enrolled in I101 Introduction to Informatics.

I101 Introduction to Informatics is an interactive course using lecture, guest speakers and applied projects to:
- Explore the broad impact of informatics across disciplines
- Build your programming, database and structured query language (SQL) skills
- Identify career and graduate school opportunities
- Introduce you to possible areas of specialization

Area of Specialization
An area of specialization is an integrated program of courses concentrating on the applications – and impact – of informatics within the context of another discipline. Choosing an area of specialization is required, and you may select from virtually any IUPUI program to best customize your degree to your career interests. The most popular specializations include:

- Business
- Computer Information Technology
- Computer Science
- Health (Biology, Health Science and more)
- Human-Computer Interaction
- Law (Legal informatics)
- Media Arts and Science

View our full range of specialization areas.

Capstone Project
From there, you'll complete specialized, hands-on courses that give you the tools and techniques needed as a future computing and technology professional. This includes completion of a capstone project during your senior year.

The capstone represents the culmination of your skills and knowledge within informatics and your chosen area of specialization. It may take the form of a thesis, a research project, a for-credit internship or an applied learning project to develop an information system.

Career Development
And before you graduate, you’ll work with our Career Services Office to learn how to job search, assemble a portfolio of your work, pursue internship opportunities and connect with employers.

- Plan of Study
- Areas of Specialization
- Learning Outcomes

Bachelor of Science in Informatics Plan of Study

Bachelor of Science in Informatics Plan of Study
Below is the plan of study for students beginning in the fall of 2013. Students who began prior to the fall of 2013 should review their plan of study found under “Additional Resources” on the top right hand side of this page. Students are responsible for completing the degree requirements for their particular plan of study. Transfer students should consult a School of Informatics and Computing academic advisor regarding potential course exceptions and/or substitutions. We encourage all students to meet with an academic advisor prior to registration each semester.

Students must earn a C- or higher in each individual course as well as a cumulative grade point average of a 2.0 or higher in order to graduate.

Core A (50 cr.)
- INFO I100 First Year Experience (1 cr.)
- INFO I101 Introduction to Informatics (4 cr.)
- INFO I201 Mathematical Foundations of Informatics (4 cr.)
- INFO I202 Social Informatics (3 cr.)
- INFO I210 Information Infrastructure I (4 cr.)
- INFO I211 Information Infrastructure II (4 cr.)
- INFO I270 Introduction to Human Computer Interaction (3 cr.)
- INFO I303 Organizational Informatics (3 cr.)
- INFO I305 Introduction to Research in Informatics (3 cr.)
- INFO I308 Information Representation (3 cr.)
- INFO I402 Informatics Project Management (3 cr.)
- INFO I421 Applications of Data Mining and Management (3 cr.)
- INFO I453 Computer and Information Ethics (3 cr.)
- NEWM N299 Directed Study (2 cr.)
* Beginning Fall 2013 NEWM N299 will replace Y195/Y295
- INFO Y395 Career Development for Informatics Majors (1 cr.)
- NEWM N221 Media Applications I (3 cr.)
- NEWM N222 Media Applications II (3 cr.)

Note: courses marked in bold can be counted towards a student’s general education requirement.

Core B (6 cr.)
Select two informatics courses at the 300 level or above.

Capstone Project (6 cr.)
Each option is two semesters in length, except the Internship option may be earned in one semester if the minimum hours are met (270 total working hours for 6 credit hours).

Select one:
- INFO I491 Capstone Project Internship (3/3 cr.) or
- INFO I492/493 Senior Thesis (3/3 cr.) or
- INFO I494/495 Design & Development of Information Systems (3/3 cr.)

Area of Specialization (15-21 cr.)
Select an area of specialization from our list of approved disciplines or choose any university-approved minor or certificate.

General Education Requirements (30 cr.)

Foundational Intellectual Skills
Students must take 15 credit hours related to Foundational Intellectual Skills. This includes 6 credits related to Core Communication skills, 6 credits in Analytical Reasoning, and 3 credits related to Cultural Understanding. The most recent list of approved classes can be found here: http://go.iupui.edu/gened.

Intellectual Breadth and Adaptiveness
Students must also take 15 credit hours related to Intellectual Breadth and Adaptiveness. This helps to foster the “ways of knowing” that are characteristic of particular fields ranging from science and the social sciences through humanities and arts. This includes 6 credits in the Life and Physical Sciences, and 9 credits distributed across the Arts/Humanities and the Social Sciences. The most recent list of approved classes can be found here: http://go.iupui.edu/gened.

General Electives (7 – 13 cr.)
Choose electives as needed to reach a total of 120 credit hours. The School of Informatics and Computing will not accept physical education activity courses or musical
Bachelor of Science in Informatics Areas of Specialization

In addition to taking Informatics courses that address the human and technical dimensions of information technology, students select an area of specialization in order to complete an Informatics degree. An area of specialization is an integrated program of courses (15 – 21 cr.) concentrating on the application and impact of informatics within another discipline.

Over the past few years, Informatics students have most often selected these areas of specialization:

- Biology
- Business
- Computer Information Technology
- Computer Science
- Health Science
- Human-Computer Interaction
- Legal Informatics
- Media Arts & Science

Choosing an area of specialization is required; most students have done so by the beginning of sophomore year. Although the areas listed above are the most popular, you may select approved minors or certificates from other IUPUI programs not listed here. If you are a new student or want more information on an Informatics major with a unique area of specialization, please contact your advisor.

Another option for an area of specialization is to complete the Minor in Computer Information Technology.

The last option is to complete an area of specialization which is NOT an official minor or certificate through CIT, but will satisfy the School of Informatics and Computing specialization requirement. Students who have completed the core courses in informatics should meet all prerequisites for the first course listed in each CIT area of specialization. Below are the options.

**Option I: Systems and Database Development**

Prerequisite: CIT 21400 or INFO I308

- CIT 21300 Systems Analysis (3 cr.) [P: CIT 21400 or INFO I308]
- CIT 27000 (Java) or 24200 (ASP.NET) or 21500 (PHP)
- CIT 37400 Systems and Database Analysis (4 cr.) (offered Fall only) [P: CIT 21300]

Select 2 from the following:

- CIT 49900 Database Programming (3 cr.) [P: CIT 200 level programming course]
- CIT 49900 Advanced Database Design [P: CIT 21400 and CIT 3xx00 DB Security]
- 300 Level Programming:
  - CIT 31300 Commercial Website Development ([P: 21200 and (CIT 21500 or CIT 24200)]
  - CIT 32900 Java Server Pages [P: CIT 27000]
  - CIT 34700 Advanced ASP.NET [P: CIT 24200]
  - CIT 38800 Java II or VB II [P: One 200-level Programming Course]

**Option II: Networking Systems**

Prerequisite: Completion of 6 hours of Quantitative and Analytical Skills requirement

- CIT 20200 Network Fundamentals (3 cr.) [P: CIT 20700]
- CIT 20300 Communications Security and Network Controls (3 cr.) [P: CIT 20700]
- CIT 20700 Data Communications (4 cr.) [P: CIT 17600]
- CIT 32700 Wireless Communication (3 cr.) [P: CIT 20700]
- CIT 40200 Design and Implementation of Local Area Networks (3 cr.) [P: CIT 20700 or CIT 35600 Network Operating Systems Administration (3 cr.) [P: CIT 20200]

**Option III: Programming**

Prerequisite: CIT 14000 Programming Constructs Lab or CSCI N335 Advanced Programming: VB

- CIT 24200 Intro to ASP.NET Programming (3 cr.) [P: CIT 14000]
- CIT 27000 Introduction to Java (3 cr.) [P: CIT 14000]
- CIT 34700 Advanced ASP.NET Programming (3 cr.) [P: CIT 24200]
- CIT 38800 Java Programming II (3 cr.) or CIT 32900 Java Server Pages (3 cr.) [P: CIT 27000]

**Computer Science**

The Computer and Information Science area of specialization requires 20 credit hours and results in the student earning a minor in Computer and Information
Science. Students must declare the Minor by contacting a CSCI department advisor, who can be reached at (317) 274-9727. Students must also complete a formal application during their last semester at IUPUI after all courses have been completed.

- CSCI 23000 Computing I (4 cr.)
- CSCI 24000 Computing II (4 cr.)
- CSCI 34000 Discrete Computational Structures (3 cr.)
- CSCI 36200 Data Structures (3 cr.)
- Two electives (6 credit hours) at the 300 – 400 level. These electives are to be taken from the approved list of electives for CSCI majors. Course prerequisites must be fulfilled prior to enrollment in CSCI courses.

At least 9 credit hours of the minor must be taken at IUPUI.

Mathematics 16600 is recommended as pre- or corequisite to CSA 36200. Students must maintain at least a 2.5 GPA in these courses in order to obtain the minor. A grade of C- or higher is required in each CSCI course.

**Health Science**
- BIOL-N 212 Human Biology I (3 cr.)
- BIOL-N 213 Human Biology I Lab (1 cr.)
- BIOL-N 214 Human Biology II (3 cr.)
- BIOL-N 215 Human Biology II Lab (1 cr.)
- HIA-M 322 Hospital Organization Management (3 cr.)
- HIA-M 325 Healthcare Information Requirements and Standards (3 cr.)
- HIA-M 330 Medical Terminology (2 cr.)
- HIA-M 420 Healthcare Planning Information Systems (3 cr.)
- HIA-M 445 Medicine and the Law (1 cr.)

**Human-Computer Interaction**
Those completing this specialization will also receive an undergraduate certificate in Human-Computer Interaction.

- INFO I270 Introduction to HCI Principles & Practices (3 cr.) – online course
- INFO I275 Introduction to HCI Theory
- INFO I300 Human-Computer Interaction
- INFO I480 Experience Design and Evaluation of Ubiquitous Computing
- NEWM N450 Usability Principles for New Media Interfaces

**Legal Informatics**
Legal informatics has been described as “the study of the application of information technologies to the field of law and the use of these technologies by legal professionals.” Therefore, the focus of the legal informatics area of specialization is on the effective use of cutting edge technology in the study and practice of law. Legal informatics also includes the law related to technology, such as intellectual property law, and security. All of the courses in the legal informatics area of specialization are online.

**What Are the Career Opportunities in Legal Informatics?**
As law firms convert from a paper-based practice to a practice using a full range of software, there are a considerable number of exciting career opportunities for people with informatics and new media degrees. Your work could encompass everything from setting up databases of documents for a trial to running all of the software to manage a law firm's operational functions, such as time-keeping and billing. It could also include preparing audio, visual and multimedia materials and presentations for accident reconstructions, criminal investigations and to explain the intricacies of machinery and high-tech inventions. Current openings in legal technology feature generous salaries and include the following job titles: case management administrator, director of litigation support, enterprise applications developer, e-discovery associate, project manager, desktop support specialist, records & docket manager, trial presentation analyst, legal technology specialist, training and education manager and web developer. View a list of potential legal informatics-related positions.

**Are There Other Career Options?**
A student who pursues the legal informatics area of specialization may also choose to continue his or her education by attending law school and becoming an attorney.

The following five (5) courses comprise the legal informatics area of specialization, for a total of 15 credit hours:

**Required Courses**
- I330 Legal and Social Informatics of Security (3 cr.) – online course
- I350 Foundations in Legal Informatics (3 cr.) – online course
- I410 Electronic Discovery (3 cr.) – online course
- I470 Litigation Support Systems and Courtroom Presentation (3 cr.) – online course
- N480 Technology and the Law (3 cr.) – online course

Students who complete all five courses as part of their undergraduate degree will earn a Certificate in Legal Informatics. Students can also earn the certificate in legal informatics as a free-standing certificate.

For additional information, please contact Professor Sara Anne Hook.

**Media Arts & Science**
The Media Arts and Science specialization requires 15 credit hours, with at least 12 credit hours at the 200-level or above and at least one course at the 400-level. You must receive a grade of C- or better in each course. Please explore our list of Media Arts and Science courses and our recommended specializations below to help you choose.

**Gaming**
- N230 Intro to Game Design
- N330 Intermediate Game Design
- N431 Game On!
- N485 Serious Games
- N485 Advanced Game Design

**Web Design and Development**
- N101 Multimedia Authoring Tools
- N102 Digital Media Imagery
- N215 Online Document Development I
- N315 Online Document Development II
Multimedia Storytelling
- N202 Digital Storytelling
- N260 Scriptwriting
- N261 Storyboarding for Multimedia
- And one of these sequences:
  - N238 2D Animation and N438 Advanced 2D Animation
  - N332 Sequential Narrative and N432 Advanced Sequential Narrative

3D Graphics
- N243 Introduction to 3D
- N342 3D Animation
- N343 3D Modeling
- N344 3D Production
- And one of the following:
  - N440 Digital Video and CGI Special Effects
  - N442 Advanced 3D Animation Techniques
  - N443 Advanced Lighting and Texturing
  - N444 Stereoscopic Production and Display

Video and Audio
- N253 Introduction to Digital Video
- N353 Intermediate Video
- N453 Advanced Video
- And two of the following:
  - N255 Introduction to Digital Sound
  - N355 Intermediate Sound
  - N356 Lighting and Field Production
  - N357 Digital Effects

Multimedia Programming
- N321 ActionScript in 3D
- N322 Dynamic Data Applications
- N328 Visualizing Information
- N421 Physical Object Interfaces
- N422 Advanced Interactive Production

Bachelor of Science in Media Arts and Science

Getting Started
To pursue a degree in Media Arts and Science, you must first apply and be accepted to IUPUI.

You’ll then want to sit down with one of our undergraduate advisors to review the program’s plan of study and find out what courses to take.

You’ll likely start with N100 Foundations of New Media, where you’ll be introduced to the evolution of digital media and begin exploring your particular interest areas with hands-on projects.

Specialty Areas
From there, you’ll take additional core courses and electives in your chosen specialty area(s), becoming fluent in the use of contemporary media tools and project management principles. A specialty area is your opportunity to customize your education in those aspects of media and production best-suited for your career goals. Specialty areas include:

- 3D Graphics
- Gaming
- Video
- Audio
- Design and Development
- Programming

Learn more about our specialty areas.

Capstone Project
With your skills sets firmly in place, you’ll design and complete a faculty-mentored capstone project during your final semester. Your capstone project signals your readiness to graduate and represents the culmination of your knowledge and skill within your chosen specialty area(s).

And as a graduating senior, you’ll showcase that education and passion to your fellow classmates, family, faculty, alumni and visiting employers during the School of Informatics and Computing Capstone Event held at the close of each semester.

Learn more about upcoming Capstone Events you can attend, as well as examples of past student capstones.

B.S. in Media Arts and Science - Plan of Study

Bachelor of Science in Media Arts and Science - Plan of Study

Degree requirements listed on this page apply to students entering the program on or after fall 2013. Requirements for students matriculating prior to fall 2013 can be found here.

Students in the Media Arts and Science program must successfully complete a minimum of 120 credit hours. Please note that some courses have prerequisites. Transfer students should consult a School of Informatics and Computing academic advisor regarding potential course exceptions and/or substitutions.

Students are responsible for completing the degree requirements listed here. We encourage you to meet with an academic advisor prior to registration each semester. We also advise reviewing the official IUPUI Bulletin prior to registration, paying careful attention to conditions concerning award of credit.

Students must earn a C- or higher in each individual course as well as a cumulative grade point average of a 2.0 or higher in order to graduate.

Core (19 cr.)
- INFO I100 First Year Seminar (1 cr.)
- NEWM N100 Foundations of New Media (3 cr.)
- NEWM N101 Multimedia Authoring Tools (3 cr.)
- NEWM N102 Digital Media Imagery (3 cr.)
- NEWM N202 Digital Storytelling (3 cr.)
- NEWM N299 Directed Study (2 cr.)
- NEWM N399 Directed Study III (1 cr.)
- NEWM N499 Capstone (3 cr.)

Note: courses marked in bold can be counted towards a student’s general education requirement.

Computing Foundation (3 cr.)
- CSCI N301 Fundamental Computer Science Concepts (3 cr.)

Course of Study (57 cr.)
At least 45 credit hours must be NEWM courses, with at least 12 hours at the 300-level, 12 hours at the 400-level and 21 hours at any level. You may select up to 12 hours from the list of selectives below.

Note: courses marked in bold can be counted towards a student’s general education requirement.

Selectives
- INFO I270 Introduction to Human-Computer Interaction Principles and Practices (3 cr.)
- INFO I275 Introduction to Human-Computer Interaction Theory (3 cr.)
- INFO I300 Human-Computer Interaction (3 cr.)
- INFO I400 Topics in Informatics (3 cr.)
- HER E101 Beginning Drawing I
- HER E102 Beginning Drawing II
- HER E103 Two-Dimensional Design for New Media
- HER E109 Color and Design
- HER E214 Visual Learning
- CSCI N241 Fundamentals of Web Development
- CSCI N341 Client-Side Web Programming
- CSCI N342 Server-Side Web Programming
- CSCI N351 Intro to Multimedia Programming
- CSCI N451 Web Game Development
- CIT 21400 Introduction to Data Management
- CIT 21500 Web Programming
- CIT 27000 Introduction to Java
- CIT 31200 Advanced Web Site Design
- CIT 41200 XML-Based Web Applications
- JOUR J152 Sports in Society
- JOUR J210 Visual Communication
- JOUR J320 Creative Advertising
- MUS Z315 Music for Film
- MUS Z317 Computer Music Composition I
- MUS Z320 Advanced Special Topics Non-Music Majors (Not all sections of Z320 fulfill the selective requirement. Please check with your advisor before registering.)

General Education Requirements (30 cr.)

Foundational Intellectual Skills
Students must take 15 credit hours related to Foundational Intellectual Skills. This includes 6 credits related to Core Communication skills, 6 credits in Analytical Reasoning, and 3 credits related to Cultural Understanding. The most recent list of approved classes can be found here: http://go.iupui.edu/gened.

Intellectual Breadth and Adaptiveness
Students must also take 15 credit hours related to Intellectual Breadth and Adaptiveness. This helps to foster the “ways of knowing” that are characteristic of particular fields ranging from science and the social sciences through humanities and arts. This includes 6 credits in the Life and Physical Sciences, and 9 credits distributed across the Arts/Humanities and the Social Sciences. The most recent list of approved classes can be found here: http://go.iupui.edu/gened.

General Electives (up to 11 cr.)
Choose from other IUPUI courses. Please note the School of Informatics and Computing will not count physical education or music performance/lessons courses as general electives.

Last updated: 02/14/2014

B.S. in Media Arts and Science - Areas of Specialization

B.S. in Media Arts and Science - Areas of Specialization
Our program is designed to be flexible, with ample opportunity to concentrate or broaden your studies in one or more specialty areas. Some students develop a passion for a particular specialty, while others aim to become mixed-media virtuosos. Our specialty areas include:

- Storytelling Fundamentals
- Gaming
- Web Design and Development
- Programming
- Audio
- Video
- 3D Graphics
- 21st Century Workplace Skills

Storytelling Fundamentals
Develop your writing, illustration and narrative skills with courses on design, scriptwriting, storyboarding, animation and more.

Note: courses marked in bold can be counted towards a student’s general education requirement.

- N201 Design Issues in Digital Media
- N202 Digital Storytelling
- N260 Scriptwriting
- N261 Storyboarding for Multimedia
- N238 2D Animation
- N241 Stop Motion Animation
- N285 Interactive Design
- N332 Sequential Narrative
- N432 Advanced Sequential Narrative
- N438 Advanced 2D Animation

Games
Become a future game-maker with coursework in storytelling, programming, character animation and game design/development.

- N230 Intro to Game Design and Development
- N284 Building Physical Prototypes
- N330 Game Design Development and Production
- N335 Character Design and Animation
- N431 Game On!
- N485 Serious Games
- N485 Advanced Game Design
Web Design and Development
Set your sights on mastering the web as you learn advanced fundamentals of web development.

- N215 Online Document Development I
- N315 Online Document Development II
- N413 Advanced Web
- N485 Online Video Streaming
- CSCI/N241 Fundamentals of Web Development

Programming
Apps are everywhere. Here's your chance to become an expert in the development of rich, interactive applications using sophisticated programming and interface design.

- N221 Media Applications I
- N222 Media Applications II
- N321 Actionscript in 3D
- N322 Dynamic Data Applications
- N421 Physical Object Interfaces
- N422 Advanced Interactive Production

Audio
Sound is an important addition to any story, film, animation, game, etc. Learn the latest in sound engineering, composition and design.

- N255 Intro to Digital Sound
- N265 Sound Composition
- N355 Intermediate Sound
- N455 Advanced Sound Design

Video
Explore your inner filmmaker through experiential learning using industry-standard equipment, advanced editing software, lighting techniques and digital effects. Work on videos in multiple genres, including interviews, dramas, documentaries and field productions.

- N253 Intro to Digital Video
- N353 Intermediate Video
- N356 Lighting and Field Production
- N357 Digital Effects
- N440 DV and CGI Effects
- N453 Advanced Video

3D Graphics
Bring your imagination to life using computer-generated imagery (CGI) in movies, games, advertising, scientific illustration and more. Course topics include special effects and 3D modeling, animation and production.

- N243 Introduction to 3D
- N342 3D Animation
- N343 3D Modeling
- N344 3D Production
- N440 DV and CGI Effects
- N442 Advanced 3D Animation Techniques
- N443 Advanced Lighting and Texturing
- N444 Stereoscopic Production and Display

21st Century Workplace Skills
Round out your education with coursework that helps develop soft skills and teaches you the ins-and-outs of the media industry. You'll learn teamwork and how to manage a project from concept through post-production.

- N250 Team Building in Technology
- N290 Creative Concept Development
- N300 Digital Media Production
- N385 Seeing Sideways
- N420 Multimedia Project Development
- I3XX Project Management

Last updated: 02/14/2014

Undergraduate Programs

Undergraduate Programs
The School of Informatics and Computing offers a Bachelor of Science degree in Informatics, a Bachelor of Science degree in Media Arts and Science, and a Bachelor of Science degree in Health Information Administration.

The very nature of these degrees, with the changing technologies and applications, requires that the content of each degree be continuously assessed and revised. Therefore, the faculty of the School of Informatics and Computing will periodically review and revise the curricula to ensure that students are prepared to meet contemporary workplace and intellectual demands.

Please contact the School of Informatics and Computing office, or refer to our Web site at http://soic.iupui.edu/ to confirm current program requirements.

Last Updated: February, 2014.

Informatics Minor

Informatics Minor
The undergraduate minor in Informatics allows a student majoring in another subject to receive instruction in the application of informatics tools and principles to that subject area.

Plan of Study Beginning Fall 2012
This plan of study is for students beginning in Fall 2012. Students must earn a C- or higher in each individual course as well as a cumulative grade point average of a 2.0 or higher in order to graduate.

Required Courses (12 cr.)

- INFO I101 Introduction to Informatics (4 cr.)
- INFO I210 Information Infrastructure I (4 cr.)
- INFO I211 Information Infrastructure II (4 cr.)

Additional Requirements (9 cr.)
Choose three courses.

- INFO I202 Social Informatics (3 cr.)
- INFO I270 Introduction to Human-Computer Interaction Principles and Practices (3 cr.)
- INFO I275 Introduction to Human-Computer Interaction Theory (3 cr.)
- INFO I300 Human Computer Interaction (3 cr.)
- INFO I303 Organizational Informatics (3 cr.)
- INFO I305 Introduction to Research in Informatics (3 cr.)
- INFO I308 Information Representation (3 cr.)
- INFO I330 Legal and Social Informatics of Security (3 cr.)
• INFO I350 Foundations in Legal Informatics (3 cr.)
• INFO I399 Current Topics in Informatics (3 cr.)
• INFO I400 Topics in Informatics (3 cr.)
• INFO I402 Informatics Project Management (3 cr.)
• INFO I410 Electronic Discovery (3 cr.)
• INFO I421 Applications of Data Mining and Management (3 cr.)
• INFO I425 Applying Web Services in Information Systems (3 cr.)
• INFO I433 Protocol Design and Analysis (3 cr.)
• INFO I445 Competitive Intelligence for Informatics I (3 cr.)
• INFO I453 Computer and Information Ethics (3 cr.)
• INFO I465 Informatics for Social Change (3 cr.)
• INFO I470 Litigation Support Systems and Courtroom Presentations (3 cr.)

Note: courses marked in bold can be counted towards a student’s general education requirement.

Plan of Study Prior to Fall 2012
This plan of study is for students who started prior to Fall 2012. A minimum G.P.A. of 2.0 (C) is required in all courses taken for the minor.

Select three
• INFO I101 Introduction to Informatics (4 cr.)
• INFO I202 Social Informatics (3 cr.)
• INFO I210 Information Infrastructure I (4 cr.)
• INFO I211 Information Infrastructure II (4 cr.)
• INFO I308 Information Representation (3 cr.)

Select two
• INFO I300 Human Computer Interaction (3 cr.)
• INFO I303 Organizational Informatics (3 cr.)

Elective
Choose one course from the list of approved electives for the undergraduate Bachelor’s Degree in Informatics

Last updated: 02/14/2014

Student Learning Outcomes

Student Learning Outcomes

Informatics is an applied, professional computing discipline. It responds to society’s need to solve increasingly complex problems in all fields of human endeavor by acquiring, managing and interpreting data. Informatics studies the ways in which people, information and digital technologies interact.

Nearly all fields benefit from the rapidly evolving fields of computing and information science. Informatics graduates solve problems through the application of computing or computation in the sciences, business, the humanities and the arts.

Computing and information technology are evolving rapidly. The student learning outcomes articulated here are central to educating Informatics graduates who possess both the technological and human-centered design skills necessary to develop and deploy useful digital tools that acquire and manage data for informed decision-making. They incorporate intellectual and ethical standards that every School of Informatics graduate should attain.

Bachelor of Science
• Health Information Administration
• Informatics
• Media Arts and Science

Undergraduate Certificate
• Human-Computer Interaction
• Informatics
• Legal Informatics
• Medical Coding

Last updated: 02/06/2014

Bachelor of Science in Health Information Administration

Bachelor of Science in Health Information Administration

Upon graduation, students are eligible for a national registry examination offered through the American Health Information Management Association (AHIMA) and earn the credential of Registered Health Information Administrator (RHIA). This credential exhibits the graduate’s expertise in the professional fields of Health Information Management.

Indiana University takes great pride in the fact that graduates of the Health Information Management program have exceeded the AHIMA national average scores on all core competencies on the Registered Health Information Administrator (RHIA) national exam.

Graduates of the Health Information Administration undergraduate program will demonstrate expertise in the following core competencies essential to success as an informatics, computing and information technology professional specializing in health information:

1. Health Data Management
   1. Health Data Structure, Content and Standards
   2. Healthcare Information Requirements and Standards
   3. Clinical Classification Systems
   4. Reimbursement Methodologies

2. Health Statistics, Biomedical Research and Quality Management
   1. Healthcare Statistics and Research
   2. Quality Management and Performance Improvement

3. Health Services Organization and Delivery
   1. Healthcare Delivery Systems
   2. Healthcare Privacy, Confidentiality, Legal and Ethical Issues

4. Information Technology & Systems
   1. Information and Communication Technologies
   2. Data, Information, and File Structures
   3. Data Storage and Retrieval
   4. Data Security
   5. Healthcare Information Systems

5. Organization and Management
   1. Human Resources Management
Bachelor of Science in Informatics

Graduates of the Informatics undergraduate program will demonstrate expertise in the following core competencies essential to success as an informatics, computing and information technology professional:

1. Technical Knowledge:
   - Demonstrate knowledge and skills in the mathematical and logical foundations of informatics, data representation, models, structures and informatics-centric management
   - Define terms and explain basic principles essential to the design and development of IT and computing systems
   - Acquire fundamental concepts and skills in software architectures and the development of information systems

2. Social Dynamics of Informatics and Information Technology:
   - Understand and apply major societal trends affecting the development and deployment of modern day IT, such as access, privacy, intellectual property, security and others
   - Critically analyze the impact of IT on individuals, groups and organizations at local and global levels
   - Apply a user-centered approach to interaction design and product usability, including techniques for quantitative and qualitative testing of interface and interaction design
   - Utilize digital tools to communicate with a range of audiences
   - Analyze the social, cultural and organizational settings in which IT solutions will be deployed to achieve successful implementation

3. Domain-specific* Critical Thinking and Problem Solving Skills:
   - Define terms and explain basic principles, concepts and theories from another domain or discipline in which IT skills will be applied
   - Deploy IT resources in the context of another domain and/or discipline
   - Synthesize, analyze and conceptualize information and ideas from multiple sources and perspectives
   - Evaluate data, arrive at reasoned conclusions and solve challenging problems

4. Collaborative Teamwork:
   - Select and effectively utilize oral, written, visual and quantitative communication skills within the context of an interdisciplinary team
   - Identify and demonstrate the skills, behaviors and attitudes necessary to function as an effective team member, including working cooperatively with diverse group members
   - Acquire the skills to initiate, manage and execute an IT project
   - Articulate legal and ethical issues when using the creative work of others; respect the intellectual property of others

5. Professional Ethics and Development:
   - Create a personal code of ethics; articulate principles for resolving ethical conflicts
   - Commit to a regular program of continuing education and lifelong learning that is independent of employer sponsorship
   - Participate in professional organizations that promote responsible computing and service to society

Bachelor of Science in Media Arts and Science

Graduates of the Media Arts and Science undergraduate program will demonstrate expertise in the following core competencies essential to success as an informatics, computing and information technology professional specializing in new and interactive media:

1. Understand digital media and its effective use as a form of communication.
2. Communicate ideas effectively in written and oral form to a range of audiences.
3. Work effectively as a member of a team to achieve a common goal.
4. Analyze a problem, identify and evaluate alternatives, plan an appropriate solution.
5. Appreciate the history, theory, and traditions of digital media. Evaluate media from multiple perspectives using the theories, concepts, and language of digital media.
6. Demonstrate mastery of the concepts, techniques, and tools in one or more digital media specialties.
7. Apply knowledge and skills to develop professional quality digital media productions in a timely manner and utilizing best practices and standards.
8. Explain the impact of digital media on individuals, organizations, and society.
9. Acknowledge diverse opinions regarding professional, ethical, legal, and social issues with a global perspective.
10. Appreciate the need for lifelong learning and have a plan for continuing professional development.
Upon completion of the undergraduate Human-Computer Interaction Certificate, students will be able to demonstrate knowledge in the following core competencies:

1. **Basic Human-Computer Interaction Theory and Usability Terms, Principles and Practices**
   - Understanding of human-computer interaction and usability terms, concepts, principles and practices
   - Problem space definition and conceptual models of interactive products
   - User-centered approaches to interaction design as applied to software and the Web
   - User profiling, needs and requirements
   - Interface design principles and processes; including related areas of visual design
   - Cognitive and information processing
   - Processes and life-cycles of interactive product design
   - Interactive product evaluation and testing methods, both qualitative and quantitative

2. **Ability to Understand and Demonstrate Basic Design and Evaluation of Interactive Products Up to the High Fidelity Prototype Stage**
   - Interactive product interface design and prototyping based on user/needs assessments
   - Human-computer interaction principles and a user-centered approach to interaction design as applied to software and the Web
   - Apply evaluation and usability testing methods to interactive products to validate design decisions

Undergraduate Informatics Certificate

Upon completion of the undergraduate Informatics Certificate, students will be able to demonstrate knowledge in the following core competencies:

1. **Technical Knowledge:**
   - Define terms and explain basic principles important to the operation of computing systems, as well as fundamental programming concepts
   - Demonstrate knowledge and skills in data representation, models, structures and management

2. **Social Dynamics of Informatics and Information Technology:**
   - Understand and apply major societal trends affecting the development and deployment of modern day IT, such as access, privacy, intellectual property, security and others
   - Critically analyze the impact of IT on individuals, groups and organizations at local and global levels
   - Analyze the social, cultural and organizational settings in which technology solutions will be deployed to achieve successful implementation

3. **Domain-specific Critical Thinking and Problem Solving Skills:**
   - Define terms and explain basic principles, concepts and theories from another domain or discipline in which IT skills will be applied
   - Access evolving trends in information technology and IT research
   - Synthesize and analyze information and ideas from multiple sources and perspectives
   - Evaluate data, arrive at reasoned conclusions and solve challenging problems

4. **Collaborative Teamwork:**
   - Select and effectively utilize oral, written, visual and quantitative communication skills within the context of an interdisciplinary team
   - Identify and demonstrate the skills, behaviors and attitudes necessary to function as an effective team member, including working cooperatively with diverse group members
   - Articulate legal and ethical issues when using the creative work of others; respect the intellectual property of others

5. **Professional Ethics and Development:**
   - Participate in the development of a personal code of ethics that considers information ethics
   - Articulate principles for resolving ethical conflicts

Undergraduate Medical Coding Certificate

Students completing the Medical Coding Certificate will acquire competencies in several domains.

**Domain I - Life Sciences**

1. **Anatomy and Physiology**
   - Identify the structures and functions of the human body
   - Locate anatomical online lookups (Adam, etc.)

2. **Medical Terminology**
   - Demonstrate their ability to spell, define, and pronounce medical terms of major disease processes, diagnostic procedures, laboratory tests, abbreviations, drugs, and treatment modalities
   - Demonstrate knowledge of root/suffix/prefix word build concepts and common medical terms

3. **Pathophysiology**
   - Identify specific disease processes by human body system
   - Identify cause, diagnosis, and treatment for each disease process

4. **Pharmacotherapy & Laboratory Findings**
   - Recognize the action of drugs such as: absorption, distribution, metabolism and excretion by the body.
   - Differentiate between drug classifications
• Identify the most commonly prescribed drugs
• Describe a formulary
• Match drugs to common conditions
• Match drugs to lab findings

Domain II - Information Technology
1. Introduction to Desktop Applications
• Demonstrate keyboard and web access skills
• Identify concepts related to hardware and software
• Demonstrate knowledge of Microsoft Office Suite applications

2. Computer Software Applications in Healthcare
• Recognize commonly used software in healthcare
• Compile public reporting for disease and disease trends
• Describe how acute care organizations store and retrieve electronic health records
• Analyze different types of encoder software
• Analyze online coding tools (coding reference tools)
• Evaluate Computer Assisted Coding (CAC) software
• Identify the issues involving the migration from a paper-based Health Information Management department to an electronic Health Information Management department
• Summarize acute care environment vendors and their system strengths.
• Evaluate an Electronic Health Record (EHR)
• Evaluate a Personal Health Record (PHR)
• Evaluate Health Information Exchanges (HIE)

Domain III - Health Information Management
1. Introduction to Health Information Management
• Recognize the content & structure of healthcare data
• List the content of medical records
• State the documentation requirements for medical records
• Identify legal/ethics issues in Health Information Management such as privacy, security, and the Health Insurance Portability & Accountability Act
• Recognize release of Information issues
• Identify the Code of Ethics for Health Information Management

2. Healthcare Delivery Systems
• Identify types of healthcare organizations
• Identify types of healthcare workers
• Identify healthcare settings that employ coders
• Understand the types and levels of Healthcare Delivery Systems in the U.S., and of the governing bodies that regulate the Health Information Management processes, and an understanding how eHIM will change this environment
• Recognize the organization of healthcare delivery
• Interpret accreditation standards
• Discuss licensure/regulatory agencies

Domain IV - Clinical Classification Systems
1. Basic Diagnosis Coding Systems
• Demonstrate knowledge of the International Classification of Diseases ICD-9-CM
• Recognize diagnostic based prospective payment groups such as DRG, APR-DRG, & RUGS.
• Recognize the International Classification of Diseases ICD-10-CM
• Recognize the Systematized Nomenclature of Medicine (SNOMED)
• Demonstrate knowledge of Current Procedural Terminology (CPT)
• Recognize procedure based payment systems such as Resource Based Relative Value (RBRV), Evaluation &Management and Ambulatory Payment Classification (APC)
• Identify the impact that coding and sequencing has on reimbursement

2. Reimbursement Methodologies
• Identify Ambulatory Surgery Center reimbursement
• Identify third party payers
• Describe billing and insurance procedures
• Discuss an explanation of benefits
• Recognize Quality Improvement Organizations (QIO) and their role in the payment process
• Identify charge master description and maintenance
• Describe managed care/capitation
• Recognize compliance issues
• Audit and monitor the coding process for regulatory compliance

Last updated: 02/04/2014

Undergraduate Legal Informatics Certificate

Undergraduate Legal Informatics Certificate
Upon completion of the undergraduate Legal Informatics Certificate, students will be able to demonstrate knowledge in the following core competencies:

• Students will be prepared to find employment in law firms and legally-related agencies and organizations, such as courts, law schools, non-profit organizations, regulatory agencies, and vendors that develop and sell products for the legal industry. For example, most federal courts in the U.S. use electronic filing, docket control and document retrieval, provide legal documents and information to the public through websites, offer webinars of oral arguments and other proceedings and have sophisticated systems for courtroom presentations. State courts are moving to become what is known as “the electronic courtroom.” The International Legal Technology Association (ITLA) has a long list of job openings that would provide interesting positions for those who complete the Certificate in Legal Informatics. Moreover, Fifty Legal Careers for Non-Lawyers describes a number
of career opportunities that are encompassed in the legal informatics curriculum.

- Students who are already working as law technology professionals or paralegals will have an opportunity to update their skills and to have a recognizable certificate from a high-quality institution of higher education, namely, the IU School of Informatics, IUPUI.
- Students will be prepared to bring cutting edge technology to law practices and other legally-related organizations and will not require training on these systems beyond a customary orientation program.
- Students will implement systems and technology that will impact the quality and cost of client services, ease the workload and enhance the productivity of busy attorneys and add greater efficiency to a variety of legally-related agencies and organizations.
- Students who want to focus on electronic discovery in their future careers will be able to sit for the electronic discovery certification examinations being developed by the Organization of Legal Professionals (OLP).

Graduate Programs

Graduate Programs
The School of Informatics and Computing offers Master of Science degrees in:

- Bioinformatics
- Health Informatics
- Human-Computer Interaction
- Media Arts and Science

All Master of Science degrees require 36 credits, including the completion of common graduate core courses.

Through its Department of Library and Information Science, the school offers a Master of Library Science degree.

The School of Informatics and Computing also offers a Doctoral (Ph.D.) program with specializations in:

- Bioinformatics
- Health Informatics
- Human-Computer Interaction

And finally, in addition to Master's and PhD degree programs, the School of Informatics and Computing offers a number of Graduate Certificate programs:

- Certificate in Informatics in Health Information Systems Architecture (Programmer and Software Engineer)

Graduate Certificate Programs
Graduate Certificate Programs
In addition to Master’s and PhD degree programs, the School of Informatics and Computing offers a number of graduate certificate programs:

- Human-Computer Interaction
- Clinical Informatics (Clinician Leader)
- Informatics for Public Health Professionals (Public Health Leader)
- Informatics in Health Information Management and Exchange (Health Information Management Exchange Specialist)
- Informatics in Health Information Security (Health Information Privacy and Security Specialist)
- Informatics in Health Information Systems Architecture (Programmer and Software Engineer)

Human-Computer Interaction

Human-Computer Interaction

Student Consumer Information about this Program

The Graduate Certificate in Human-Computer Interaction (HCI) program is a 15-credit-hour program focusing on the core theory and best practices of the discipline. All certificate requirements must be completed within three years and with a minimum cumulative G.P.A. of 3.0 (B). Courses with a grade below a B- will not count. All courses may be taken via distance education.

Admission requirements for the certificate program are the same as those for the M.S. program.

### Clinical Informatics

#### Clinical Informatics

**Student Consumer Information about this Program**

Passionate about information technology, workflow redesign and engagement strategies for health care clinicians? This one-year certificate program is designed for licensed physicians, nurses and other clinical health care professionals seeking leadership roles leveraging information systems to

- Improve health care safety and quality
- Maximize workflow efficiencies
- Preserve user and patient satisfaction

New government requirements for electronic health record adoption and utilization will create a shortage of qualified clinical leaders who truly understand information systems and how to implement them to decrease medical errors and adverse events, while improving overall quality and patient outcomes. Completion of this training program prepares the participant for the implementation of certified electronic health record systems.

Training includes two core courses, three specialized courses and a mentored practicum for a total of 18 credit hours to be completed within one year.

**Core Curriculum**

- **INFO B530 Foundation of Health Informatics**
- **INFO B581 Health Informatics Standards and Terminology**

**Specialized Courses (Choose 3)**

- **INFO B505 Informatics Project Management**
- **INFO B578 Data Analysis**
- **LIS S644 Consumer Health Informatics**
- **INFO B641 Business of Health Informatics**
- **INFO B643 Natural Language Processing**
- **INFO B535 Clinical Information Systems**

- **INFO B642 Clinical Decision Support Systems**

**Mentored Practicum**

- **INFO B584 Practicum in Health Information Technology**

The mentored practicum provides the opportunity to synthesize coursework and demonstrate competency in clinical informatics in the context of a real-world health care environment.

### Informatics for Public Health Professionals

**Informatics for Public Health Professionals**

**Student Consumer Information about this Program**

The Public Health Leader certificate training program prepares public health professionals to develop, procure and implement information systems that meet public health program needs. This includes

- Supporting the development of strategic direction for public health informatics within the enterprise
- Using informatics standards
- Managing and monitoring IT operations
- Evaluating information systems and their applications
- Contributing to the development of interoperable public health information systems
- Implementing solutions that ensure the confidentiality, security, and integrity of captured data while maximizing the availability of information for public health

The scope of this program is designed to meet the core competencies for public health informaticians as described by the Centers for Disease Control and Prevention. Based upon this guidance, ideal eligible students entering this program will have a graduate or doctoral level preparation in public health, including demonstrated course work in epidemiology and data analysis. The requirement for masters or doctorate level preparation may be waived by the demonstration of significant public health experience through years of service and a leadership role at a public health agency. Participants will complete a mentored project in health informatics with a focus on a public health research or community project.

Training includes two core courses, three specialized courses, and a mentored practicum to be completed within one year.

**General Course Requirements**

18 graduate credit hours are required, including:

- Two core courses (6 credits)
- Three specialization courses (9 credits)
- Practicum (3 credits)

**Core Courses (6 credits)**

- **PBHL P650 Readings in Public Health with subtopic Foundations in Public Health Informatics**
- **INFO B581 Health Information Standards and Terminology**

**Specialization (9 credits)**

- **INFO B505 Informatics Project Management**
May 15, 2014

INFO B578 Data Analysis
LIS S644 Consumer Health Informatics
INFO B535 Clinical Information Systems
INFO B583 Security and Privacy Policies and Regulations for Health Care

Mentored Practicum (3 credits)
INFO B584 Practicum in Health Information Technology

The mentored practicum focuses on participation in the development of knowledge management tools for the public health enterprise, ensuring that the knowledge, information, and data needs of the project, program users and other stakeholders are met, applying public health informatics research, and supporting the use of informatics to integrate clinical health, environmental risk and population health.

Additionally, all training participants are expected to participate in the Indiana Center of Excellence in Public Health Informatics (ICEPHI) monthly work-in-progress seminars. The ICEPHI brings together the expertise of the following institutions:
- The Polis Center, a national leader in community-based and public health research and applications using geographic information technologies
- The Indiana State Health Department
- The Marion County (Ind.) Health Department
- The IU School of Medicine’s Department of Public Health
- The Department of Geography in the School of Liberal Arts at IUPUI
- IUPUI's Center for Health Geographics
- A data visualization group at IU-Bloomington

After training participants complete their mentored practicum, they are required to present their outcomes at a monthly ICEPHI meeting.

Health Information Management and Exchange

Health Information Management and Exchange
Student Consumer Information about this Program

The primary intent of this certificate training program is to produce skilled participants able to improve health care delivery through the timely collection, management, retrieval, exchange and analysis of electronic health information.

Upon successful completion of the program, participants will
- Achieve a fundamental level of understanding of secure biomedical information management and exchange
- Possess an advanced level of proficiency with respect to coding, classification and medical terminologies
- Achieve an advanced level of proficiency with respect to data management, data quality and data exchange.

- Be competitive for careers like “EHR Implementation Analyst” within health care and public health organizations

The Health Information Management and Exchange Specialist program is designed for post-baccalaureate graduates in healthcare degree programs who desire specialized training in information systems, storage and retrieval.

This 18 credit hour program includes five courses and mentored practicum to be completed within one year.

Core Curriculum
- INFO B582 Health Information Exchange
- INFO B583 Security and Privacy Policies and Regulations for Health Care
- INFO B641 Business of Health Informatics
- INFO B530 Foundations of Health Informatics
- INFO B581 Health Informatics Standards and Terminology

Mentored Practicum
- INFO B584 Practicum in Health Information Technology

The mentored practicum provides the opportunity to synthesize the coursework and demonstrate competency in the role of an EHR Implementation Analyst. Students will be able to demonstrate their comprehension, critical thinking, and problem solving abilities alongside faculty and staff in a real-world environment with a proven leader in health information exchange.

Health Information Security

Health Information Security
Student Consumer Information about this Program

This certificate program provides comprehensive knowledge and skill in health information security program development and administration, including policy, procedures, architectures, risk assessment, disaster recovery and business continuity for both health care and public health organizations. Program graduates will be prepared to take on the roles like:
- Information Security Officer
- Health Information Privacy and Security Specialist
- Chief Healthcare and Information Privacy and Security Officers (CISO),

Successful applicants will possess a bachelors or masters degree who are seeking professional education in health IT.

This 18 credit hour program includes six courses and mentored practicum to be completed within one year.

Core Curriculum
- INFO B535 Clinical Information Systems
- INFO B581 Health Informatics Standards and Terminology
- INFO B583 Security and Privacy Policies and Regulations for Health Care
- INFO B590 Topics in Informatics

Mentored Practicum
• **INFO B584 Practicum in Health Information Technology**

The mentored practicum allows students to integrate classroom training with real-world experiences. Depending upon the venue chosen, this practical experience may include:

- Working alongside faculty/staff from the Indiana School of Medicine and Regenstrief in electronic health care systems
- Developing and integrating security and privacy policies into real health care systems
- Participating in privacy/security projects that involve the Marion County Public Health Department
- Involvement in one of many funded research groups with projects in-progress across the broad spectrum of clinical, public health and health informatics

**Health Information Systems Architecture**

This certificate program transforms applicants with IT and computer science backgrounds into health information system architects for health information systems design and development. Participants gain both theoretical and practical background in health information system design. Practical experience may come from projects with OpenMRS or commercial health information systems available through Regenstrief Institute and the School of Informatics and Computing.

Upon successful completion of the program, participants will possess the following:

- A basic understanding of health informatics and health information systems
- Practical experience in developing software tools for health information systems
- Excellent knowledge of technical issues associated with health information system development, such as security, client-server application development, health information reporting and data analysis

Qualified applicants are expected to have an undergraduate or graduate degree in Computer Science or in a closely-related field, with a strong programming and database skill set.

This 18 credit hour program includes five courses and mentored practicum to be completed within one year.

**Core Curriculum**

- **INFO B535 Clinical Information Systems**
- **INFO B581 Health Informatics Standards and Terminology**
- **LIS S644 Consumer Health Informatics**
- **INFO B530 Foundations of Health Informatics**
- **INFO B585 BioHealth Analytics**

**Mentored Practicum**

- **INFO B584 Practicum in Health Information Technology**

The mentored practicum allows trainees the opportunity to work on real-world health information systems.

**Graduate Degree Programs**

**Graduate Programs**

The School of Informatics and Computing offers Master of Science degrees in:

- Bioinformatics
- Health Informatics
- Human-Computer Interaction
- Media Arts and Science

All Master of Science degrees require 36 credits, including the completion of common graduate core courses.

Through its Department of Library and Information Science, the school also offers a Master of Library Science.

The School of Informatics and Computing also offers a Doctoral (Ph.D.) program with specializations in:

- Bioinformatics
- Health Informatics
- Human-Computer Interaction

All Ph.D. candidates must meet with their academic and/or research advisor for course selection and plan of study.

Finally, the School of Informatics and Computing offers a number of Graduate Certificate Programs:

- Human-Computer Interaction
- Clinical Informatics (Clinician Leader)
- Informatics for Public Health Professionals (Public Health Leader)
- Informatics in Health Information Management and Exchange (Health Information Management Exchange Specialist)
- Informatics in Health Information Security (Health Information Privacy and Security Specialist)
- Informatics in Health Information Systems Architecture (Programmer and Software Engineer)
MS Degree Programs

Given the rapid and apparently unlimited growth of this new field at all levels of competence, each of the master's degree programs serves students who need education in the use of information technologies to enhance their job performance or employment prospects.

The School of Informatics and Computing offers Master of Science degrees in:

- Bioinformatics
- Health Informatics
- Human-Computer Interaction
- Media Arts and Science

All Master of Science degrees require 36 credits, including the completion of common graduate core courses.

- Financial Assistance

Bioinformatics

Bioinformatics

The M.S. in Bioinformatics is a 36-credit-hour program that integrates knowledge from informatics, computation, information systems, mathematics, biology and other related areas. Successful applicants are expected to have an introductory background in both informatics (or computer science) and biology.

The program may be completed in two years by a full-time student. Part-time study options are available for domestic students. However, international students and any students funded directly by the School of Informatics and Computing (in the form of an assistantship or fellowship) must complete the program in two years.

You may choose one of three tracks:

1. Project track
2. Thesis track
3. A non thesis/project track

Project Track

Required Core Courses (18 cr.)
- INFO B519 Introduction to Bioinformatics (3 cr.)
- INFO B532 Seminar in Bioinformatics (3 cr.)
- INFO B556 Biological Database Management (3 cr.)
- INFO B573 Programming for Chem/Life Science (3 cr.)
- INFO B606 Algorithms in Bioinformatics (Previously offered as CSCI 590) (3 cr.)
- INFO B616 Integrative Big Data Analysis (currently offered as B590 High Throughput Data in Biology) (3 cr.)

Advanced Core Courses (12 cr.)
- INFO B529 Machine Learning in Bioinformatics (3 cr.)
- INFO B536 Statistical Methods in Bioinformatics (3 cr.)
- INFO B646 Computational System Biology (3 cr.)
- INFO B619 Structural Bioinformatics (3 cr.)
- INFO B656 Translational Bioinformatics Applications (3 cr.)
- INFO B636 Advanced Genomics and Translational Bioinformatics (3 cr.)

0 – 3 credits from the following 4 courses:
- INFO B535 Clinical Information Systems (3 cr.)
- INFO B642 Clinical Decision Support Systems (3 cr.)
- INFO B590 Next Generation Sequencing (3 cr.)
- INFO B585 BioHealth Analytics (3 cr.)

Project (3 cr.)
- INFO B692 Bioinformatics Project (3 cr.)

Electives (3 cr.)

Students can take other graduate courses either inside or outside the School of Informatics and Computing.

School of Medicine has a long history of fellowship research centers, and affiliated academic units. The education in health informatics through its health schools, Informatics is uniquely suited to conduct graduate health computing industries. companies, state and federal health care agencies, and companies, behavioral health organizations, insurance long care facilities, corrections facilities, pharmaceutical accounting firms, home health care agencies, long-term care hospitals, managed care organizations, claims and reimbursement organizations, acute care hospitals, managed care organizations, health informatics work in a variety of settings, including quality improvement directors, and chief information officers. Those who are professionally involved in health informatics work in a variety of settings, including acute care hospitals, managed care organizations, consulting firms, claims and reimbursement organizations, accounting firms, home health care agencies, long-term care facilities, corrections facilities, pharmaceutical companies, behavioral health organizations, insurance companies, state and federal health care agencies, and health computing industries.

Informatics is uniquely suited to conduct graduate education in health informatics through its health schools, research centers, and affiliated academic units. The School of Medicine has a long history of fellowship training and research in medical informatics. The School of Nursing, which is the largest in the country, is in the forefront in the development of nursing informatics, with a particular emphasis on consumer health informatics. The School of Library and Information Science offers master's and doctoral degrees in information science, which are distinguished by their sociotechnical orientation.

The school also has a broad research thrust exploring the interconnection of social, behavioral, and technological issues associated with the use of information and communication technologies. Faculty in the department is externally funded to conduct research in medical informatics and bioinformatics. Other academic programs in public health, applied health sciences, and hospital administration offer important supporting course work.

### Degree Requirements

The M.S. in Health Informatics is a 36-credit-hour program that integrates knowledge from informatics, healthcare, health information technology and other disciplines to analyze and protect patient data, increase healthcare efficiencies and produce higher quality patient care.

Degree requirements listed on this page apply to students entering the program on or after fall 2012. Requirements for students matriculating prior to fall 2012 can be found [here](#).

- INFO B642 Clinical Decision Support Systems (3 cr.)
- INFO I575 Informatics Research Design (3 cr.)
- INFO B691 Thesis (3 cr.)
- Elective (3 cr.)
- Elective (3 cr.)
- Elective (3 cr.)
- Elective (3 cr.)

**Note:** The semester a course is offered can change. The student is responsible for checking the Registrar for confirmation.

#### Sample Elective Options

Other elective courses are possible upon approval of the faculty.

---

**Advanced Core Courses (12 cr.)**

9 – 12 credits from the following 6 courses:

- INFO B529 Machine Learning in Bioinformatics (3 cr.)
- INFO B536 Statistical Methods in Bioinformatics (3 cr.)
- INFO B646 Computational System Biology (3 cr.)
- INFO B619 Structural Bioinformatics (3 cr.)
- INFO B656 Translational Bioinformatics Applications (3 cr.)
- INFO B636 Advanced Genomics and Translational Bioinformatics (3 cr.)

0 – 3 credits from the following 4 courses:

- INFO B535 Clinical Information Systems (3 cr.)
- INFO B642 Clinical Decision Support Systems (3 cr.)
- INFO B590 Next Generation Sequencing (3 cr.)
- INFO B585 BioHealth Analytics (3 cr.)

**Electives (6 cr.)**

Students can take other graduate courses either inside or outside the School of Informatics and Computing.

Last updated: 02/25/2014

**Health Informatics**

Health Informatics

The School of Informatics and Computing offers a Master of Science in Health Informatics to address needs arising from the rapidly changing health care environment. Research and educational programs in medical, nursing, and health informatics are growing at a rapid rate nationally. This can be attributed in large part to the increasing complexity and importance of health care reimbursement, which has created a need for improved classification, storage, and analysis of medical information to establish the best clinical practice and cost efficiency.

Users of health informatics include clinicians, researchers, health care educators, health organization administrators, health policy analysts, health information administrators, quality improvement directors, and chief information officers. Those who are professionally involved in health informatics work in a variety of settings, including acute care hospitals, managed care organizations, consulting firms, claims and reimbursement organizations, accounting firms, home health care agencies, long-term care facilities, corrections facilities, pharmaceutical companies, behavioral health organizations, insurance companies, state and federal health care agencies, and health computing industries.

Informatics is uniquely suited to conduct graduate education in health informatics through its health schools, research centers, and affiliated academic units. The School of Medicine has a long history of fellowship training and research in medical informatics. The School of Nursing, which is the largest in the country, is in the forefront in the development of nursing informatics, with a particular emphasis on consumer health informatics. The School of Library and Information Science offers master's and doctoral degrees in information science, which are distinguished by their sociotechnical orientation.

The school also has a broad research thrust exploring the interconnection of social, behavioral, and technological issues associated with the use of information and communication technologies. Faculty in the department is externally funded to conduct research in medical informatics and bioinformatics. Other academic programs in public health, applied health sciences, and hospital administration offer important supporting course work.

#### Degree Requirements

The M.S. in Health Informatics is a 36-credit-hour program that integrates knowledge from informatics, healthcare, health information technology and other disciplines to analyze and protect patient data, increase healthcare efficiencies and produce higher quality patient care.

Degree requirements listed on this page apply to students entering the program on or after fall 2012. Requirements for students matriculating prior to fall 2012 can be found [here](#).

#### Sample Elective Options

Other elective courses are possible upon approval of the faculty.
Human-Computer Interaction

Human-Computer Interaction
The M.S. in Human-Computer Interaction is a 36-credit-hour program that integrates computing, usability, interface design, the social sciences and other disciplines in the design and development of user-friendly technologies, software and information systems.

As a graduate, you'll be well prepared for a career in private industry or academia, or for admission to the Ph.D. in Informatics program with a human-computer interaction specialization.

The program may be completed in two years by a full-time student. Part-time study options are available for domestic students. However, international students and any students funded directly by the School of Informatics and Computing (in the form of an assistantship or fellowship) must complete the program in two years.

A thesis or applied research project is required to complete your degree.

For students starting Fall 2013
Core (24 cr.)

- INFO H501 Introduction to Informatics (3 cr.)
- INFO H541 Interaction Design Practice (3 cr.)
- INFO H543 Interaction Design Methods (3 cr.)
- INFO H561 Meaning and Form in HCI (3 cr.)
- INFO H563 Psychology of HCI (3 cr.)

Electives (6 cr.)

- INFO H503 Social Impact of Information Technologies (3 cr.)
- INFO B505 Informatics Project Management (3 cr.)
- INFO H534 Seminar in Human Computer Interaction (1-3 cr.)
- INFO H550 Legal and Business Issues in Informatics (3 cr.)
- INFO H554 Independent Study in Human Computer Interaction (1-3 cr.)
- INFO I575 Informatics Research Design (3 cr.)
- INFO H590 Topics in Informatics (3 cr.)

Final Project or Thesis (6 cr.)

Final Project Option
All HCI students must complete a final project by registering for two courses: H680 HCI Professional Practice 1 (offered ONLY in the Fall) and H681 HCI Professional Practice 2 (offered ONLY in the Spring). Each course includes a formally scheduled in-class time that students must attend. Students will work on one final project that extends throughout the two courses, i.e., in both fall and spring semesters. Students will receive an official grade at the conclusion of each course/semester. Students are encouraged to propose a project that can be realistically completed by the conclusion of H681, the Spring semester. Incompletes are NOT permitted.

Required Courses

- INFO H680 HCI Professional Practice 1 (3 cr.) – Required for Final Project
  Note: Pre-requisites: INFO H541, H561, H543, H563, and H564
- INFO H681 HCI Professional Practice 2 (3 cr.) – Required for Final Project
  Note: Pre-requisites: INFO H680

Thesis Option
The Thesis option is reserved for students who possess a demonstrated ability to carry out publishable empirical research. Qualified students must find a research-active faculty member willing to advise them on a thesis by the end of the second semester.

Students taking the Thesis option must take and successfully pass I575 Informatics Research Design by the completion of their first year. They should also take an additional statistics course prior to their final regular semester (see the plan of study). As with the final project, an incomplete will NOT be permitted. It is the student’s responsibility to propose a thesis that can be completed within a two-semester timeline. To do this, students MUST provide their primary thesis advisor with a full thesis proposal and outline that includes a timeline for the writing of the thesis.

Required Course

- INFO H694 HCI Thesis (6 cr.)

School of Informatics and Computing

- INFO H503 Social Impact of Information Technologies (3 cr.)
- INFO B505 Informatics Project Management (3 cr.)

**Media Arts and Science**

**Media Arts and Science**
The M.S. in Media Arts and Science is a 36-credit-hour professional program emphasizing an applied, project-based approach to the latest in digital media production. The program can be customized with study in other fields, including media production, design thinking and usability analysis, psychology, communication theory, information management, and computing. Projects will be based on your specific area(s) of interest to build a valuable portfolio and advance your career.

The program easily accommodates working professionals with many evening courses and a flexible timetable for degree completion for the part-time student. Full-time students can complete the program in two years.

**Core (9 cr.)**
- NEWM N500 Principles of Multimedia Technology (3 cr.)
- NEWM N501 Foundations of Digital Production (3 cr.)
- NEWM N503 Digital Media Application Design Processes (3 cr.)

**Project or Thesis (6 cr.)**
- NEWM N506 Thesis/Project (3 cr.) Taken each of your final two semesters.

**Electives (21 cr.)**

**School of Informatics and Computing**

**Media Arts and Science**
- NEWM N502 Digital Media Motion and Simulation Methods
- NEWM N504 Advanced Interactive Design Applications
- NEWM N505 Internship in Media Arts
- NEWM N585 Serious Games
- NEWM N585 Psychology of Media
- NEWM N510 Web Database Concepts
- NEWM N553 Independent Study (1-3 cr.), can be repeated

**Human-Computer Interaction**
*Note: completion of this set of courses earns the Graduate Certificate in HCI*

**PhD Degree Programs**

**Ph.D. Programs**
The Indiana University School of Informatics and Computing, the first of its kind in the country, was created as a place where innovative multidisciplinary programs could thrive, a program where students can apply the skills of technology to a range of other fields.

All Ph.D. candidates must meet with their academic and/or research advisor for course selection and plan of study.

This program is administered with the approval of Indiana University, Bloomington.

The School of Informatics offers a [Doctoral (Ph.D.)](http://example.com) program with specializations in:
- Bioinformatics
- Health Informatics
- Human-Computer Interaction

**Bioinformatics**
The **Ph.D. in Informatics with Bioinformatics specialization** is a 90-credit-hour program that integrates knowledge from informatics, computation, information systems, mathematics, biology and other related areas.

The program includes core courses, research rotations, your choice of minor, qualifying examinations and a dissertation.

Degree requirements listed on this page apply to students entering the program on or after fall 2012. Requirements for students matriculating prior to fall 2012 can be found [here](#).

**Core Courses (Core A: 18 cr.)**
- **INFO B519 Introduction to Bioinformatics** (3 cr.)
- **INFO B573 Programming for Chem/Life Science** (3 cr.)
- **INFO B556 Biological Database Management** (3 cr.)
- **INFO B590 Computational Methods for Analyzing High-Throughput Data in Biomedicine** (3 cr.)
- **CSCI 590 Algorithms in Bioinformatics** (3 cr.)
- **INFO B600 Professionalism and Pedagogy in Informatics** (3 cr.)

**Advanced Courses (Core B: 12 cr.)**
Select four:
- **INFO B529 Machine Learning in Bioinformatics** (3 cr.)
- **INFO B619 Structural Bioinformatics** (3 cr.)
- **INFO B646 Computational System Biology** (3 cr.)
- **INFO B656 Translational Bioinformatics Applications** (3 cr.)
- **GRAD 652/R607 Biostatistics II / Advanced Statistics** (3 cr.)
- **INFO B590 Next Generation Sequencing** (3 cr.)

**Seminar Courses (6 cr.)**
- **INFO B627 Advanced Seminar I – Bioinformatics** (3 cr.)
- **INFO B637 Advanced Seminar II – Bioinformatics** (3 cr.)

**Independent Study/Rotation (6 cr.)**
Students are required to take 6 credit hours of rotation as part of the thesis research credits. It is recommended to take these credit hours early in the Ph.D. program by enrolling in INFO B790.

*May be taken twice*
- **INFO B790 Independent Study/Rotation** (3 cr.)

**Electives**

*No minimum or maximum credits* Students may take other electives (subject to approval) at the graduate level as needed for their specific research.

**Minor (minimum 12 cr.)**
All students will be required to have an appropriate minor outside or partially inside the School of Informatics and Computing for a minimum 12.0 credit hours. Minors will be selected with the advisor’s recommendation. Some appropriate minors would include: biology, chemistry, cognitive psychology, computer science, information science, or statistics. In all cases the number of hours to be included in the minor will be consistent with the requirements of the unit granting the minor. Some of the courses included in the minor may also count toward the student’s methodology or other requirements.

**Qualifying Examination – Written**
All students will take a written qualifying examination that covers the core courses (CORE A and B). The examination will be set by a group of faculty who are familiar with the content of the core courses. Examinations will be offered in August. Examinations must be completed by the beginning of the student’s fourth year in the program but can be completed before that time when the core courses are completed. Students who do not successfully complete the examination can retake the examination a second time.

**Qualifying Examination – Oral**
1. The oral examination will take place after the student successfully passes the written exam. Students must pass both the written and oral exam before passing on to candidacy. Only two attempts to pass the oral examination will be allowed.
2. The oral exam will be based on the student’s response to the written exam and any material from the core courses.

**Dissertation Proposal**
This is an oral review that covers in-depth knowledge of the student’s primary research area and dissertation proposal. The research proposal for dissertation must be approved by the student’s research committee. That committee may have the same membership as the program committee or the students may choose different members. The advisor for the dissertation will be a faculty member in the School of Informatics and Computing and a member of the Graduate Faculty. At least one the three members of the committee will be based outside of the school. The student will defend the thesis proposal at a public colloquium in the school. The review should be completed within one-year after passing the Qualifying Examinations.

**Dissertation (30 cr. minimum)**
- **INFO B890 Thesis/Project in Bioinformatics** (1-6 cr.)

Please refer to the [IUPUI Graduate School Bulletin](#) for more details on the dissertation process.

Last updated: 02/25/2014

**Health Informatics**

The **Ph.D. in Informatics with a Health Informatics specialization** is a 90-credit-hour program that integrates knowledge from informatics, healthcare, health information technology and other disciplines to analyze and protect patient data, increase healthcare efficiencies and produce higher quality patient care.

The program includes core courses, research rotations, your choice of minor, qualifying examinations and a dissertation.

**Foundations in Health Informatics (21 cr.)**
- **INFO B501 Introduction to Informatics** (3 cr.)
- **INFO B530 Foundations of Health Informatics** (3 cr.)
- **INFO B535 Clinical Information Systems** (3 cr.)
- **INFO I575 Informatics Research Design** (3 cr.)
Informatics Program and (2) critical review of Health
Written Exam
Qualifying Examinations

Dissertation
Proposal (Required)

Dissertation (21 to 30 cr.)

Human-Computer Interaction

The Ph.D. in Informatics with a Human-Computer Interaction specialization is 90-credit-hour program that integrates computing, usability, interface design, the social sciences and other disciplines in the design and development of user-friendly technologies, software and information systems.

The program includes core courses, research rotations, your choice of minor, qualifying examinations and a dissertation.

Core A (15 cr.)
Core B (12 cr.)
- INFO H501 Introduction to Informatics (3 cr.)
- INFO H600 Professionalism and Pedagogy in Informatics (3 cr.)
- INFO H624 Advanced Seminar I in Human-Computer Interaction (3 cr.)
- INFO H634 Advanced Seminar II in Human-Computer Interaction (3 cr.)

Research Rotation (6 cr.)
- INFO H790 Research Rotations (6 cr.)

Research Theory/Methods (9 cr.)
- INFO I575 Informatics Research Design (3 cr.)

Besides I575, two additional courses in research methods are required to better prepare you in the necessary theory, knowledge and techniques of quantitative and qualitative methodologies. These courses may be taken from programs outside the School of Informatics and Computing, such as the social sciences (e.g., psychology, anthropology, sociology, or communication). See the plan of study document for recommended research methods courses.

Electives (9 – 18 cr.)
You may take other electives (subject to approval) at the graduate level as needed for your specific research. View the plan of study for more information.

Minor (12 cr.)
You must complete a minor within a domain appropriate to your choice of specialization and/or research area. All courses must be graduate-level and outside the School of Informatics and Computing.

Qualifying Examinations
1. Written Exam – You must successfully complete a written qualifying examination by the end of the program’s second year. The exam is established by faculty and covers subject matter taken in the program’s core courses. The exam may be retaken once.
2. Oral Exam – An oral examination takes place within weeks after successful completion of the written exam. You must pass both the written and oral exam before passing on to Ph.D. candidacy. The oral exam is based on the student’s response to the written exam and core course material. The exam may be retaken once.

Guide to the HCI PhD Qualifying Exams

Dissertation
A dissertation is a written elaboration of original research that makes creative contributions to your chosen area of specialization. Students will enroll multiple times in INFO H890 Thesis Readings and Research (1-12 cr.) as you work to complete your dissertation. All requirements must be completed within seven years of passing the qualifying exams. The dissertation process includes the following components:

1. Proposal – This is an in-depth oral review undertaken by students who have made significant progress in their research. The proposal will be defended at a public colloquium. You must complete the proposal within one year of passing the qualifying exams.
2. Defense – You must defend your dissertation in an open seminar scheduled when doctoral research is almost complete.

Please refer to the IUPUI Graduate School Bulletin for more details on the dissertation process.

Master of Science in Media Arts and Science
Grads of the Media Arts and Science graduate program will demonstrate expertise in the following core competencies essential to success as an informatics, computing and information technology professional specializing in new and interactive media:

1. Design and create digital media products that are targeted to a specific purpose and that meet professional standards for quality.
2. Plan a coordinated collection of multi-media or trans-media communications and/or experiences, using each medium to good advantage.
3. Assess media communications and/or experiences, discriminating among features that influence effectiveness.
4. Recommend strategies, practices, and/or tools appropriate to a problem.
5. Predict future trends and developments in digital media, based on examination of the history, tradition, and current drivers in the field.
6. Communicate in written and oral form to a range of audiences.

Last updated: 02/05/2014

Master of Science in Bioinformatics
Grads of the Bioinformatics program will demonstrate expertise in the following core competencies essential to success:

1. Extract information from different types of bioinformatics data (gene, protein, disease, etc.) including their biological characteristics and relationships.
2. Employ different data representation models and formats used for bioinformatics data representation including markup languages, such as SBML and CellML, and ontologies, such as GO ontology.
3. Apply the different approaches used for data integration and data management, including data warehouse and wrapper approaches.
4. Master computational techniques and diversified bioinformatics tools for processing data including statistical, machine learning and data mining techniques.
5. Analyze processed data in particular with the support of analytical and visualization tools.
6. Carry out bioinformatics research under advisement including systems biology, structural bioinformatics and proteomics.
7. Interact with non-bioinformatics professionals, such as biologists and biomedical researchers in order...
to better understand their bioinformatics needs for better support and service delivery.

8. Design and develop bioinformatics solutions by adapting existing tools, designing new ones, or a combination of both.

Last updated: 02/04/2014

Master of Science in Health Informatics

Graduates of the Health Informatics program will master health informatics knowledge and skills, as well as acquire practical experience in three domains:

1. **Understanding technology and methodologies for processing data, information and knowledge in Health Care**
   - Explain concepts of information and communication technologies.
   - Elaborate basic informatics terminology like data, information, knowledge, hardware, software, networks, information systems, information systems management, databases.
   - Execute queries on large databases using data mining and testing hypothesis approaches.
   - Integrate data from disparate systems found in hospitals and clinics.
   - Implement standards and terminologies for documenting health events and exchanging protected health information.

2. **Information Literacy for Health Care**
   - Determine the nature and extent of the information needed.
   - Access needed information effectively and efficiently.
   - Evaluate information and its sources critically and incorporates selected information into his or her knowledge base and value system.
   - Either individually or as a member of a group, use information effectively to accomplish a specific health care purpose.
   - Propose/justify Decision Support Systems algorithm to support care delivery.
   - Integrate Natural Language Processing (NLP) with standards and terminologies used in healthcare.
   - Evaluate outcomes of the use of information in clinical practice.

3. **Information Management**
   - Verbalize the importance of health information systems to clinical practice.
   - Have knowledge of various types of health information systems and their clinical and administrative uses.
   - Assure confidentiality of protected patient health information when using health information systems.
   - Assure access control in the use of health information systems.
   - Assure the security of health information systems.
   - Estimate the Return of Investment (ROI) of health information technology applications for healthcare.

Master of Science in Human-Computer Interaction

Graduates of the Human-Computer Interaction program will demonstrate expertise in the following core competencies essential to success:

1. **Human-Computer Interaction Theory and Usability Terms, Principles, and Practices**
   - Problem space definition and conceptual models
   - Social mechanisms used in communication
   - User-centered approaches to interaction design
   - User profiling and user needs and requirements
   - Interface design principles and processes
   - Cognitive and information processing
   - Product assessments related to a market analysis
   - Processes and life-cycles of interaction design
   - Interface design and related areas of visual design and aesthetics
   - Product evaluation and testing methods, both qualitative and quantitative

2. **Develop and Apply Human-Computer Interaction Principles and Practices Related to the Design and Evaluation of Interactive Products:**
   - Produce interface designs and prototypes based on user and needs assessments.
   - Apply HCI theory, principles, and a user-centered approach to interaction design.
   - Design interactive products up to the prototype.
   - Apply evaluation and usability testing methods to interactive products to validate design decisions.

Doctor of Philosophy in Informatics - General

Graduates of the Ph.D. in Informatics program will demonstrate expertise in the following core competencies:

1. Identify, discuss, and apply the fundamental concepts, theory and practices in informatics such as information representation and architecture, retrieval, structured query language, information extraction and integration from disparate data sources, information visualization and security, and data mining including the relevant tools and methodologies.
2. Identify and practice the knowledge of beginning statistics, including sampling and correlations,
research paradigms such as constructivism and pragmatism, distinctions and limitations of qualitative, quantitative, and mixed method research designs, understanding validity and reliability.

3. Apply research proposals, conduct peer reviews, create an annotated bibliography, create and present a high-level presentation pertaining to research, and use SPSS.

4. Acquire and apply the ability to read and critique scientific articles by analyzing the problem presented, solutions proposed, and critically looking at the solutions and the results, as well as learn how to organize and write a scientific article through critical thinking and discussion.

5. Write research proposals by examining NSF and NIH case studies, including style and grant specific requirements.

6. Develop and deliver class-room lectures, including processes for critically evaluating class-room lectures and how to prepare effective teaching materials.

7. Apply research methods and acquire more advanced knowledge in different areas of research through apprenticeship and mentorship.

Concentrations will have the above general outcomes plus additional ones.

Certificate in Clinical Informatics

Certificate in Clinical Informatics
Graduates of the Graduate Certificate in Clinical Informatics program will be able to lead the successful deployment and use of health IT to achieve transformational improvement in the quality, safety, outcomes and, thus, the value of health services in clinical areas:

1. Understanding technology and methodologies for processing data, information and knowledge in Health Care
   • Explain concepts of information and communication technologies.
   • Integrate data from disparate systems found in hospitals and clinics.
   • Implement standards and terminologies for documenting health events and exchanging protected health information.

2. Information Literacy for Health Care
   • Determine the nature and extent of the information needed.
   • Access needed information effectively and efficiently.
   • Evaluate outcomes of the use of information in clinical practice.

3. Information Management
   • Verbalize the importance of health information systems to clinical practice.

   • Have knowledge of various types of health information systems and their clinical and administrative uses.
   • Assure confidentiality of protected patient health information when using health information systems.
   • Assure access control in the use of health information systems
   • Assure the security of health information systems.

Student Learning Outcomes

Graduate Student Learning Outcomes
Informatics is an applied, professional computing discipline. It responds to society’s need to solve increasingly complex problems in all fields of human endeavor by acquiring, managing and interpreting data. Informatics studies the ways in which people, information and digital technologies interact.

Nearly all fields benefit from the rapidly evolving fields of computing and information science. Informatics graduates solve problems through the application of computing to their domains of expertise.

Computing and information technology are evolving rapidly. The student learning outcomes articulated here are central to educating Informatics graduates who possess both the technological and human-centered design skills necessary to develop and deploy useful digital tools that acquire and manage data for informed decision-making. They incorporate intellectual and ethical standards that every School of Informatics and Computing graduate should attain.

Master of Library Science
• Master of Library Science

Master of Science
• Bioinformatics
• Health Informatics
• Human-Computer Interaction
• Media Arts and Science

Doctor of Philosophy
• Bioinformatics
• Health Informatics
• Human-Computer Interaction
• General PhD Learning Outcomes

Graduate Certificate
• Clinical Informatics
• Human-Computer Interaction
• Informatics in Health Information Management and Exchange
• Informatics in Health Information Security
• Informatics in Health Information Systems Architecture
• Informatics for Public Health Professionals

Last updated: 02/06/2014
Certificate in Informatics for Public Health Professionals

Certificate in Informatics for Public Health Professionals
Individuals graduating from this program will be able to lead the successful deployment and use of health IT to achieve transformational improvement in the quality, safety, outcomes, and thus in the value of public health services.

1. Understanding Technology and Methodologies for processing data, information and knowledge in Healthcare
   • Explain concepts of information and communication technologies.
   • Integrate data from disparate systems such as clinical data, surveillance data, etc. for public health decision making.
   • Implement standards and terminologies for documenting public health events and exchanging protected health information for improved surveillance.

2. Information Literacy for Healthcare
   • Determine the nature and extent of the information needed for public health decisions.
   • Access needed information effectively and efficiently.
   • Evaluate outcomes of the use of information in public health.

3. Information Management
   • Verbalize the importance of health information systems to public health surveillance.
   • Have knowledge of various types of health information systems and their potential use in public health surveillance.
   • Evaluate when confidentiality of protected patient health information is superseded by public health needs.
   • Assure access control in the use of health information systems for public health needs.
   • Assure the security of health information systems.

Last updated: 02/04/2014

Certificate of Informatics in Health Information Systems Architecture

Certificate of Informatics in Health Information Systems Architecture
Graduates of the Graduate Certificate in Informatics in Health Information Systems Architecture will be the architects and developers of advanced health IT solutions. These individuals will be cross-trained in IT and health domains, thereby possessing a high level of familiarity with health domains to complement their technical skills in computer and information science:

1. Understanding Technology and Methodologies for Processing Information Healthcare:
   • Explain health informatics and design and develop health information systems
   • Recommend usability and usefulness measures to evaluate health information systems
   • Discern principles of informatics that govern communication systems, health decisions, information retrieval, telemedicine, bioinformatics and evidence-based medicine, as well as ways in which information science and computer technology can enhance evidence-based practice in healthcare

2. Information Literacy for Health Care:
   • Inspect solutions for management and mining of data generated in scientific laboratories and clinical trials for data mining and knowledge discovery, which include knowledge discovery techniques and databases, extraction of data/metadata stored in data warehouses using Storage Area Networks and dealing with issues of handling this data
   • Design approaches to access needed information effectively and efficiently
   • Analyze the principles and methodologies underlying most standards for healthcare data interchange and practical issues of reading and understanding specifications, implementing and translating between standards

3. Information Management:
   • Analyze theoretical and practical models for the delivery of consumer health information and implement them in the design and development of consumer health information resources

Last updated: 02/04/2014

Certificate of Informatics in Health Information Security

Certificate of Informatics in Health Information Security
Graduates of the Graduate Certificate in Informatics in Health Information Security program will be qualified to serve as institutional/organizational information privacy or security officers:

1. Understanding Technology and Methodologies for Processing Information in Healthcare:
   • Explain concepts of information and communication technologies
   • Analyze network service management (i.e. DNS/DHCP, web, email, spam filtering, resource sharing, database, directory services and authentication), network communication and security (i.e. network devices, firewalls, intrusion detection systems, and incident response/forensics), and administration (i.e. shell scripting, documentation/request management, policy and procedure management, data center considerations, and virtualization)
Certificate in Informatics in Health Information Management and Exchange

Individuals graduating from this program will support the collection, management, retrieval, exchange, and/or analysis of information in electronic form, in healthcare and public health organizations.

1. Understanding Technology and Methodologies for processing data, information and knowledge in Health Care
   - Explain concepts of information and communication technologies.
   - Elaborate basic informatics terminology like data, information, knowledge, hardware, software, networks, information systems, information systems management, databases.

   - Implement standards and terminologies for maintaining privacy and security of protected health information

2. Information Literacy for Healthcare:
   - Determine the nature and extent of the privacy and security needed to protect health information
   - Propose infrastructure needed to safeguard protected health information effectively and efficiently
   - Evaluate administrative, technical and physical safeguards critically
   - Access privacy and security regulations for healthcare information transactions including policy, procedures, guidelines, security architectures, risk assessments, disaster recovery, and business continuity; particular attention given to the Health Insurance Portability and Accountability Act (HIPAA) and the Health Information Technology for Economic and Clinical Health (HITECH) Act

3. Information Management:
   - Verbalize the importance of health information exchange to healthcare outcomes
   - Have knowledge of various types of health information exchange services
   - Assure confidentiality of protected patient health information when using health information exchange
   - Assure access control in the use of health information exchange
   - Assure the security of health information exchange
   - Possess the skills as outlined in supportive functions component of the HL7 model applicable to health information exchange
   - Understand the principles upon which organizational and professional Health Information System for providers and consumers are based.

Last updated: 02/04/2014

Certificate in Human-Computer Interaction

Graduates of the Human-Computer Interaction Graduate Certificate program will demonstrate expertise in the following core competencies essential to success:

1. Basic HCI theory, terms, principles, and conceptual models
2. User-centered design theory and practices related to interaction design
3. HCI design and development processes and life-cycle
4. User profiling to interaction design (needs and requirements)
5. System requirements and product assessments
6. Interface design principles and processes
7. Product usability evaluations and testing methods
8. The purpose of the graphic user interface
9. Usability theory, terms, and the applied techniques
10. Principles of the interface design and prototyping processes
11. Interface grids and typographical devices
12. Information architecture and content management
13. Classic user testing theory and tools
Upon completion of the Bioinformatics PhD program, students will be able to:

1. Analyze different types of bioinformatics data (gene, protein, disease, etc.) including their biological characteristics and relationships.
2. Formulate steps involved in transforming the data to knowledge, as well as introducing different techniques used at each step.
3. Impact informatics on other disciplines such as biology from several perspectives including the social and economic aspects.
4. Establish different data representation models and formats used for bioinformatics data representation including markup languages, such as SBML and CellML, and ontologies, such as GO ontology.
5. Master different approaches used for data integration and data management, including data warehouse and wrapper approaches.
6. Develop computational techniques and employ diversified bioinformatics tools for data processing including statistical, machine learning and data mining techniques.
7. Analyze processed data in particular with the support of analytical and visualization tools.
8. Perform bioinformatics research in area of interest.
9. Interact with non-bioinformatics professionals, such as biologists and biomedical researchers in order to better understand their bioinformatics needs for better support and service delivery.
10. Develop the ability to design and develop bioinformatics solutions by adapting existing tools, designing new ones, or a combination of both.

Graduates will also be able to apply HCI theory and principles to product development:

1. Apply HCI principles and a user-centered approach to interaction design
2. Analyze user needs and requirements
3. Design and develop prototypes based on user assessments (needs and requirements), while applying HCI principles and models.
4. Apply evaluation and usability testing methods to interactive products to validate design decisions
5. Develop pre-design and post-design usability testing techniques on the developed Web site
6. Assess user needs and requirements
7. Categorize, design, and develop information in proper architectural structures
8. Create interface design prototypes based on a range of design principles and user data, and user assessments
9. Apply prototype principles and a user-centered approach to interaction design
10. Apply evaluation and usability testing methods to prototypes to validate design decisions and to the Web product to validate design decisions using: a) Classic user testing, and b) Heuristic inspection
11. Analyze test data and write a comprehensive report on the product development process of their redesigned Web site, i.e. of the stages of pre-design, design, and post-design, testing, and data analysis
12. Implement a HCI research proposal, including research questions, collecting the relevant literature and methodology
13. Develop a general framework, with a hierarchy of concepts and topics, including a refinement of the research question
14. Understand and apply the various research methods regarding qualitative and quantitative data

Doctor of Philosophy in Informatics - Health Informatics

Graduates of the Health Informatics track will gain the additional and specific expertise described below:

1. Become skilled in the analysis, design and implementation of information systems that support and expand the delivery of health care
2. Function as a translator between clinicians and information technology personnel
3. Ensure that information systems capture and present critical health information
4. Interact with non-health care professionals, such as computer science, information science, cognitive science and other researchers to better understand how their knowledge advances health informatics science
5. Demonstrate in-depth knowledge on health informatics research approaches
6. Propose innovative approaches to the development of health informatics knowledge

Doctor of Philosophy in Informatics - Human Computer Interaction

Graduates of the Human-Computer Interaction track will gain the additional and specific expertise described below:

1. Identify and explain HCI domain knowledge in the areas of both basic and applied research with considerable depth, including:
Bioinformatics is an integration of computing, social science and information systems design that can be applied in any number of fields as an industry professional, faculty member or researcher. A School of Informatics and Computing graduate degree from Indiana University will make you more valuable with its unique integration of computing, social science and information systems design that can be applied in any number of fields as an industry professional, faculty member or researcher.

The Department of BioHealth Informatics brings together expertise from biological and health sciences, and addresses the strong industrial demand for graduates with expertise in both bio and health informatics as well as health information administration.

The programs within, aim to provide training in technologies across the range of Informatics applied to Bioscience and Healthcare. Skills developed range from the analysis of genotypes and gene expression data to advanced image processing techniques, advanced information management, clinical terminology, and healthcare records.

Bioinformatics encompasses pure and applied science dealing with the collection, management, analysis and dissemination of biological data and knowledge, especially with respect to genetics and molecular biology.

Health Informatics addresses the need for improved classification, storage, and analysis of medical information to establish the best clinical practice and cost efficiency.

The Health Information Administration program combines computing and healthcare management for better patient care. Widespread adoption of new technologies is fueling a critical need for specialized HIA professionals able to manage electronic health records, analyze health...
information and ensure the privacy and security of patient data.

**BioHealth Informatics Department Faculty**

**Administrative Officers**
- Brad N. Doebbeling, M.D. (University of Colorado, 1985), Department Chair, bdoebbel@iupui.edu
- Josette Jones, Ph.D. (University of Wisconsin, 2002), Director, Health Informatics Program, jofjones@iupui.edu
- Lauri Perry, M.J., RHIA (Loyola University), Director, Health Information Administration Program, lperry@iupui.edu
- Huanmei Wu, Ph.D. (Northeastern University, 2005), Director, Bioinformatics Program, hw9@iupui.edu

**Faculty**
- Chen, Jake Y., Ph.D. (University of Minnesota, 2001), Associate Professor, Bioinformatics, jakechen@iupui.edu
- Dixon, Brian E., Ph.D. (Indiana University, 2011), Assistant Professor, Health Informatics, bedixon@iupui.edu
- Hayes, Alisa, M.S.A. (Central Michigan University), Lecturer, Health Information Administration, alchayes@iupui.edu
- Janga, Sarath Chandra, Ph.D. (University of Cambridge, UK, 2010), Assistant Professor, Bioinformatics, scjanga@iupui.edu
- Liu, Xiaowen, Ph.D. (University of Hong Kong, 2008), Assistant Professor, Bioinformatics, xwliu@iupui.edu
- Murry, Carolyn, M.B.A. (Indiana Wesleyan University, 2010), Lecturer, Health Information Administration, ccamurry@iupui.edu
- Palakal, Mathew, Ph.D. (Concordia University, 1987), Professor, Bioinformatics, mpalakal@iupui.edu
- Schilling, Katherine, Ed.D. (Boston University, 2002), Associate Professor, katschil@iupui.edu
- Tennant, Felisa, M.I.S. (Indiana University, 2001), Clinical Associate Professor, ftennant@indiana.edu

**Bioinformatics Program**

**Bioinformatics**

Pursue a future in Bioinformatics. You’ll combine biology and computing in a revolutionary approach to science and medicine. From expanding knowledge of the human genome to developing personalized medicines to cure disease, you’ll conduct important translational research that promises to make life better.

Today’s science and technology capture immense amounts of biological data – data that holds the key to resolving life’s biggest questions.

But finding such answers requires people uniquely-qualified in the computer and life sciences to understand and apply this data.

Using computational languages and tools, Bioinformatics will prepare you to design and execute translational research linking data to medicine and drug discovery.

And you’ll experience excellent career prospects in the pharmaceutical, biotech and IT industries, as well as government and academia.

It’s a field with untold promise but one guarantee — you will help people lead better, healthier lives.

The School of Informatics and Computing's Bioinformatics program offers a Master of Science and a Ph.D. degree.

Last updated: 02/07/2014

**Health Informatics Program**

**Health Informatics**

Join the next generation of healthcare leaders with Health Informatics. Using patient data, electronic medical records and health IT, you’ll shape the future of healthcare and clinical systems in the Information Age.

Dedicated to the acquisition, analysis and meaningful use of patient data, health informatics is commanding attention for its ability to deliver new information systems and technologies – advances that result in higher quality healthcare at lower cost.

It’s a field with immeasurable value and a bright future. Healthcare systems and other employers look to health informatics graduates to fill key roles making decisions and setting policy. And with $19 billion invested in health information development and implementation, career prospects are rising even higher.

From addressing the privacy and security concerns of electronic health records, to reducing healthcare disparities between demographic groups, to even designing personalized medicines, health informatics is your ticket to what’s happening now in healthcare and information technology.

The School of Informatics and Computing offers Master of Science and Ph.D. degrees in Health Informatics--along with graduate certificate programs in Clinical Informatics, Informatics for Public Health Professionals, Health Information Management and Exchange, Health Information Security and Health Information Systems Architecture.

Last updated: 02/07/2014

**Health Information Administration Program**

**Health Information Administration**

Widespread adoption of new technologies is fueling a critical need for specialized Health Information Administration (HIA) professionals able to manage electronic health records, analyze health information and ensure the privacy and security of patient data.

The HIA program will uniquely qualify you to take advantage of these opportunities as a health information leader, including professional experience in healthcare settings built right into the curriculum and the ability to sit for a national credentialing exam upon graduation.

The School of Informatics and Computing offers a B.S. in Health Information Administration, and an undergraduate Certificate in Medical Coding.

Last updated: 02/07/2014
Department of Human-Centered Computing

The Department of Human-Centered Computing is interdisciplinary and the areas of study focus on the design, and broader implications of computing technology in different social, cultural, political, and organizational contexts. They explore creative ideas, theories, and modern technologies that enhance our understanding of the complex and increasingly influential relationships between people and computing.

Human-Computer Interaction is the branch of informatics that studies and supports the design, development, and implementation of humanly usable and socially acceptable information technologies.

Media Arts and Science is an applied program emphasizing digital media to communicate, educate, engage, or entertain with a focus on the fundamentals of communication, digital storytelling, multimedia design, development and production. The Media Arts and Science program has both undergraduate and graduate degree programs.

The Informatics undergraduate program integrates principles of computer science, information systems design, psychology and sociology in a curriculum tailor-made for the next generation of computing professionals. Thinking big picture, building strong technical skills as well as understanding how we use technology to communicate, work, heal and play and solve problems that are facing society and industry.

Human-Computer Interaction Program

Human-Computer Interaction

Then you’ll enjoy a career in Human-Computer Interaction. Using research and principles from design, psychology, business, engineering and computing, you’ll create technology that not only solves problems, but is intuitive, functional and enjoyable to use.

Human-Computer Interaction provides the answers to how Apple made the iPhone so unique, or how Amazon’s Kindle changed the way we read, or why your favorite websites are so easy to use when so many others make you want to scream.

In our applied, research-based program, you’ll focus on the end user and the experience to conceive, design and develop interactive applications that deliver results, add
even more functionality to the web than thought possible, and design sought-after technologies.

Professionally, you’ll find success in user interface design, including web, mobile, tablet and software design, next-generation interactive technology, marketing, interactive product research and development, or even your own start-up.

Whatever you pursue, you’ll be a valuable asset for your ability to push the boundaries of what’s yet to come.

Informatics Undergraduate Program Description

Informatics Undergraduate Program

Look no further than a degree in Informatics. You’ll integrate principles of computer science, information systems and design, psychology and sociology in a curriculum tailor-made for the next generation of computing professionals.

Informatics is smart computing going beyond hardware and software. Informatics thinks big picture, building strong technical skills as well as understanding how we use technology to communicate, work, heal and play and solve problems that are facing society and industry. It is a way to make a difference in the lives of others, so the focus of the program is on the social impact of computing — how people and technology connect. As a student in the Undergraduate Informatics program, you will use your knowledge to develop ground-breaking IT solutions with real-world value in business, health care, science, art and entertainment.

You will further customize your degree by selecting an area of specialization, where you will apply informatics in another discipline, such as biology, business, computer science, health science, human-computer interaction, law or new media.

The Undergraduate Informatics program will help you prepare for an in-demand career that will take you wherever you want to go.

Graduate Media Arts and Science Program

Graduate Media Arts and Science Program

Then now is the time to consider a graduate degree in Media Arts and Science. In today’s digital age, employers are looking for professionals with strong integrated media skills to develop attention-grabbing animations, 3D graphics, cutting-edge video, interactive games and bold websites. Being at the top of your game is critical.

The Media Arts and Science graduate program will help you build the necessary skills to expand your professional horizons and gain a competitive edge in the marketplace. You’ll receive training in new media, visualization, programming, theory and design, plus enjoy the flexibility to specialize in a particular area that interests you most.

Learn the ins and outs of integral creative software, get hands-on experience with production equipment and become an expert in the latest design trends and technologies — all while building a valuable portfolio showcasing your work to employers.

Last updated: 02/07/2014

Undergraduate Media Arts and Science Program Description

Undergraduate Media Arts and Science Program Description

The Media Arts and Science program is for you. You’ll build the necessary foundation in new forms of media and visualization, programming, theory and design to take your place among the next generation of great digital artists.

In Media Arts and Science, you integrate creativity with contemporary career-building skills to produce dynamic websites, interactive games, 3D motion graphics, digital illustrations and animations, audio and video.

It’s a new game. Technology is changing how we express ourselves, entertain, learn and connect with the world—and employers have taken notice.

Last updated: 02/07/2014

Overview

Mission

The Department of Library and Information Science is committed to excellence and innovation in education of information professionals, the creation of new knowledge, and service to a diverse society in a dynamically changing global information environment.

To accomplish this mission, the Department has adopted as its goals:

• To educate students for fulfilling careers, professional librarianship, lifelong learning, social responsibility, and technological mastery;

• To contribute new knowledge and advance science, with a particular interest in user-centered approaches, social, behavioral, and technological perspectives, interdisciplinary collaboration, and the role of information in society;

• To serve society, our state and local constituencies, and the library and information science profession;

• To create a climate of intellectual engagement, openness, and respect within the Department.

The Department provides students with an understanding of the conceptual foundations of librarianship and information science and of the multifaceted nature of the wider information environment. It prepares students with a rich mix of knowledge, attitudes, and skills necessary to function as critical thinkers and effective communicators. Graduates should have a strong grounding in theory and the ability to translate theory into effective practice.

To provide a proper setting for the implementation of this mission, the Department promotes the advancement of knowledge, both theoretical and applied, through active programs of research and scholarly publication. The
Department also provides service within the university and to the local, national, and international communities through contributions to, and leadership in, associations and organizations and by assuming consulting, advising, publishing, and other professional roles. This leadership by example is considered essential in providing a framework in which the goals of the program can be pursued effectively.

The Department also provides opportunities for students to seek educational experiences involving the development of the specialized skills currently emphasized in information-providing agencies. The development of these skills often highlights current trends in information systems and information management that serve to assist the student in career planning. Such educational experiences are gained through selection of elective courses from the Department of Library and Information Science, through cooperation with other graduate programs of the university, and through seminars, workshops, conferences, group projects, internships, and practicum experiences.

Accreditation & Licenses

The Department of Library and Information Science (LIS) at Indiana University ranks consistently in the top ten MLS programs in North America. In a six-year survey of scholarly productivity and impact, the combined MLS department (at Indianapolis and Bloomington) was ranked number one (Library & Information Science Research, 2006). The M.L.S. (Master of Library Science) degree has been accredited continuously since 1953.

The ALA-accredited M.L.S. is the professional entry degree for those seeking positions in academic, public, school, or corporate libraries. Graduate courses may be completed within the M.L.S. curriculum to meet state requirements for certification as a school library media specialist or public librarian. In all library and information areas the M.L.S. is the foundational degree for those who seek management and directorship positions.

Dual-degree and special certificate programs are available at IUPUI between LIS and the Department of History, the School of Public and Environmental Affairs, the School of Law, Philanthropic Studies, and other disciplines. LIS courses can be taken in conjunction with graduate-level degrees in informatics, education, fine arts, and business as these programs often allow approved graduate credits from LIS to count as part of their graduate degree. Interested students should contact the LIS department chair for details.

The Department of Library and Information Science is a member of the Association for Library and Information Science Education, the American Library Association, the Association for Information Science and Technology, and the Special Libraries Association. It maintains affiliation with the Indiana Library Federation, the Association of Indiana Media Educators, and the Indiana Cooperative for Libraries (INCOLSA).
are eligible to apply for admission. Applicants in the final year of their undergraduate program may apply and be granted admission conditional upon being awarded the bachelor’s degree.

An applicant must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale or its equivalent in the total undergraduate program, or an average of 3.2 in the latest graduate degree or representative graduate hours (usually 30 semester hours) completed.

If the applicant does not meet the minimum undergraduate (or graduate) GPA requirements, he or she must submit Graduate Record Exam scores.

GRE Revised Test (Nov.2011) – Initial GRE scoring conversion charts are available. These charts may be updated as more student test data is collected by the GRE board.

LIS looks at the whole application in making an admissions decision. The following scores will be considered to have met the minimum required – V: 153, Q: 144, and AW (not decided at this time).

See GRE Score Interpretation.

• GRE – IU Institutional Code: 1324
• GRE – Library Science Code: 4701

How to Apply

The Graduate Admissions Committee will not review applications until the application fee and all required materials are completed and received by the deadlines indicated.

Have transcripts sent directly to:

Department of Library and Information Science
Indiana University School of Informatics and Computing
535 West Michigan Street, IT 475
Indianapolis, IN 46202

1. Complete and submit the IUPUI Graduate Online Application form. Paper applications are not accepted.

2. Submit a 750 – 1500 word personal statement. Your personal statement should indicate the following:
   • In what manner do you see yourself as a future library/information leader in your future organization and community?
   • What examples can you provide that illustrate how you work as a constructive member of a team to solve problems?
   • Provide your perspective on or experiences with technology in information services.

3. Submit official transcripts from all post-secondary colleges and universities (graduate and undergraduate), except for Indiana University campuses.

4. Submit three references from academic instructors and/or employers. To submit references, you will input contact information for each person on your electronic application. The reference will receive a form via email to fill out and submit electronically.

5. If necessary, complete the Graduate Record Examination (GRE) and ensure that IUPUI receives your score report. The IUPUI and MLS program codes are listed above. The Informatics and Computing school code for the GRE is 1325 – enter this code on the exam’s answer sheets.

6. For international and non-native English speaking students, submit English language proficiency exam score (see below).

7. Pay your $60 application fee.

Special Instructions for International Students and Non-native English Speakers

Graduate applicants are expected to have completed the equivalent of a U.S. Bachelor’s degree in order to be considered for graduate study, such as:

1. Have completed at least 16 years of primary +secondary+tertiary education and have earned a university first degree, or

2. Have completed a university first degree that grants eligibility for graduate study in a recognized university in that same country.

Persons without this background cannot be accepted for graduate study, regardless of the name of any first degree they may hold.

Once minimum eligibility is determined, Indiana University graduate programs will make the final admissions decision, based on reviewing the applicant’s educational credentials to determine if the applicant is academically competitive and has the preparation needed for success in that program. The Office of International Affairs at IUPUI will provide evaluations of the applicant’s educational background and academic documents upon request from the departments.

International applicants must submit both GRE and TOEFL (Test of English as a Foreign Language) scores. To gain admission, international applicants must earn minimum scores in the table below.

TOEFL and GRE details:

• TOEFL – TOEFL minimum 600 (Paper test) or 250 (Computer test) or 100 (new test Fall 2005)
• TOEFL – IU Institutional Code: 1325;

International applicants must comply with the deadline dates indicated in Office of International Affairs Web site at www.iupui.edu/~oia.

Department of Library and Information Science, Graduate Programs

General Requirements

Master of Library Science Degree Program (36 credit hours + S401)

Note: Exceptions to degree requirements must be approved in writing by the student’s faculty advisor and approved by the dean. Approval forms for course waivers or transfer credit are available in the SLIS office. Most forms are also available on the SLIS Web site. It is the student’s responsibility to ensure that written approval for any program exception is submitted to the SLIS administrative office for placement in the student’s academic file.
A waiver does not grant academic credit toward the degree. All 36 graduate credits for the M.L.S. must be completed from the SLIS graduate curriculum. Up to six graduate credits from another ALA-accredited master's program may be transferred toward the IU M.L.S. provided the content is current, with high student performance, and has the approval of the School's dean. Students admitted at Indianapolis (or at Bloomington) may normally take only 15 credits from the other Indiana University site.

**Computer-Based Information Skills**

The School of Library and Information Science requires that students be computer, network, and information literate and be familiar with basic operations that will be used throughout their course work. This knowledge is prerequisite to many courses in the SLIS curriculum and will form the basis for further learning and skill development throughout students’ academic and professional careers. To acquire this base, each student must complete, or apply and receive a waiver for, the SLIS course S401 Computer-Based Information Tools.

Normally, the course is completed during the first semester of enrollment. The course is to be completed or a waiver obtained before the student has completed nine graduate credits toward the M.L.S. This 3-credit, undergraduate-level course is a prerequisite for many courses in the SLIS curriculum, although it does not count toward the credit hours required for a SLIS graduate degree.

**Probation Policy**

In addition to the probationary admission described earlier, a SLIS student may be placed on probation at any point in the program when a failure to achieve a minimum cumulative grade point average (GPA) of 3.0 occurs. The student will be assigned a time frame in which the required 3.0 GPA must be restored. Failure to achieve a 3.0 GPA within the required time or to maintain the 3.0 GPA for the remainder of the degree program will result in dismissal from the graduate program.

**Grade Requirements**

In no case is a master’s degree awarded for course work in which a cumulative grade point average of less than 3.0 has been achieved. Students will not be permitted to continue graduate course work beyond the number of credit hours required for the degree solely in an attempt to raise the grade point average to the required level. Students are expected to maintain a 3.0 GPA each semester. Students must complete one course for each of the five core requirements (see the MLS Degree page), with a grade of B- or above.

**Time Requirements**

All requirements for the M.L.S. degree must be met within five consecutive calendar years from the date of completion of the first credited course. In some circumstances, a one-year extension of the five-year time frame may be given, but in no case will a longer extension be granted. Application for the SLIS master’s degree must be submitted early in the fall semester for candidates planning to graduate in December, and early in the spring semester for candidates planning to graduate in May, June, or August.

**Assessment Requirement**

Students who begin the MLS degree in Fall of 2011 and later will participate in an electronic portfolio assessment of program goal achievement. Throughout their coursework, they select materials and evidence of mastery of program goals and upload it to an Oncourse ePort site. All areas are to be completed before graduation. This information is used for general program assessment and for individuals to reflect on what they have accomplished in the MLS.

**Foreign Language**

Although language skills are recognized as significant in, and in some cases essential to, the information professions, and although such courses may be taken through the university, credit earned for such courses may not be applied toward the M.L.S. degree.

**Certificate Programs**

**Public Librarianship**

Students who desire certification for positions in Indiana public libraries must meet the requirements established by the State Library Certification Board. For complete information, contact:

Indiana Library Certification Board Indiana State Library
140 N. Senate
Indianapolis, IN 46204
phone: 1-800-451-6028
http://in.webjunction.org/667/-/articles/content/4079938

**Teacher of Library Media (K-12)**

A teaching license is required for employment as a school media specialist in any state. Individuals who hold a valid teaching license may add the certification for Teacher of Library Media with emphasis in school media information technology by successful completion of the following 27 credits. The student must meet the graduate admission requirements for the M.L.S. program at either Indianapolis or Bloomington.

Contact Dr. Rachel Applegate, Chair of the Library and Information Science Department at (317) 278-2395 or rapplega@. Full course descriptions are available at soic.iupui.edu. Successful completion of 27 credits for library media may also count toward the 36 credit hour Master of Library Science (M.L.S.), accredited by the American Library Association.

**Public Librarianship Certification**

Public library certification is a process administered by the Indiana State Library for people working in Indiana public libraries. It is not awarded by Indiana University or LIS, and is not the same as school library media (teaching) certification. Coursework at the undergraduate level, for certificate levels 4, 5 and 6 is available through Ivy Tech. Coursework for levels 1, 2 and 3 is provided in the MLS program at LIS Indianapolis.

**Certification Levels**

**Librarian Certificate 6**
• High school diploma or GED with 5 years of library experience or 9 semester hours of required library science courses.

Librarian Certificate 5
• 60 hours of college or associate’s degree, including the Library Technical Assistant Associate’s degree from IVY Tech and, or including, 9 semester hours of required library science courses.
• The required library science courses include:
  • LIS S502 Collection Development and Management
  • LIS S501 Reference
  • LIS S553 Public Library Management

Undergraduate library science courses are available from Ivy Tech.

Librarian Certificate 4
• Bachelor’s degree from an accredited college or university, including 15 semester hours of required library science courses
  • LIS S502 Collection Development and Management
  • LIS S501 Reference
  • LIS S551 Library Management or LIS S553 Public Library Management
  • LIS S571 Materials for Youth or LIS S572 Youth Services
  • LIS S504 Cataloging

Librarian Certificate 3
• A graduate degree from an American Library Association (ALA) accredited library science school.

Librarian Certificate 2
• A graduate degree from an American Library Association (ALA) accredited library science school, and
• Three years of library experience.

Librarian Certificate 1
• A graduate degree from an American Library Association (ALA) accredited library science school, and
• Ten years of library experience, or six years of library experience that includes three years of supervising professional staff.

Last updated: 02/10/2014

Teacher of Library Media (K-12) Certification
Certification as Teacher of Library/Media (P-12)
The program leading to certification as a school library/media specialist at Indiana University is approved by NCATE and the MLS program is ALA-accredited. The program meets the requirements for Teachers of Library Media from the Indiana Professional Standards Board.

Coursework for this certification area can be completed on the IU Bloomington or Indianapolis (IUPUI) campus. The Indianapolis program is a fully-online program with the exception of student teaching or interning, which must be completed within the state of Indiana.

Students can call or email Kym Kramer, Director of School Library Media Programs for the Bloomington and Indianapolis campuses, with questions: 317.278.2093; toll free: 866.758.6254 866.758.6254; kakramer@indiana.edu.

Avenues for Certification
Recent changes to the teaching certification laws in Indiana have created alternative avenues for individuals to pursue P-12 Teacher of Library/Media Certification.

Indiana Certified Teachers with a Current Teaching License
The state of Indiana recognizes a passing score on the Praxis II Library Media Specialist test as acceptable proof to acquire the P-12 Teacher of Library/Media Certification.

It should be made clear however that the gap between the knowledge of a classroom teaching professional and a certified school library professional can be quite broad. Therefore, in alignment with the current national guidelines for school libraries 1, School Library Media Director, Kym Kramer, strongly suggests the following minimum courses be taken prior to attempting to pass Praxis II in order to best envision and lead your school’s library program into the future:
  • LIS S571 Materials for Youth
  • LIS S574 Information Inquiry
  • LIS S671 School Media
  • LIS S502 Collection Development

Indiana Students without Current Teaching Credentials
Students must meet MLS degree admissions criteria in order to complete coursework leading to school media certification. The professional position of school library media specialist in Indiana requires a valid Indiana teaching license so the course work will include both library courses (27 hours) as well as education coursework (15 hours) PLUS student teaching that must be completed within the state of Indiana).

Students from Outside Indiana with Current Teaching Credentials
Each state Department of Education has individualized requirements for advanced certifications. Out-of-state students interested in the K-12 Teacher of Library Media Certification will be advised on a case-by-case basis. They must work initially with School Library Media Education Director, Kym Kramer, to discuss pursuing their K-12 Teacher of Library Media Certification in their state. It is possible other states will not accept the “test-only” proof of certification and will require some amount of course work. At a minimum, the following courses would be suggested:
  • LIS S571 Materials for Youth
  • LIS S574 Information Inquiry
  • LIS S671 School Media
  • LIS S502 Collection Development
Students from Outside Indiana without Current Teaching Credentials

Indiana library/media/technology certification will transfer to any state in the U.S. The student seeking certification in a state other than Indiana should contact the certification office in that state to be certain of meeting any additional teacher training requirements.

Next, out-of-state students interested will be advised on a case-by-case basis. They must initially contact Kym Kramer, School Library Media Education Director, to discuss pursuing their K-12 Teacher of Library Media Certification in their state.

Out-of-state students should call or email Kym Kramer, Director of School Library Media Programs for Bloomington and Indianapolis campuses, with questions: 317.278.2093 317.278.2093; tollfree: 866.758.6254 866.758.6254; kakramer@indiana.edu.

Course Work for P-12 Teacher of Library/Media Certification

Initially, the student must meet the graduate admission requirements for the MLS program at either Indianapolis or Bloomington prior to completing six hours of library science courses.

Successful completion of 27 credits for library media may also count toward the 36 credit hour Master of Library Science (MLS), accredited by the American Library Association. Three additional courses (9 credits) will be required in addition to the courses listed below to round out the MLS. Students who already have an MLS can only be admitted as LIS Non-Degree Graduate students.

Required Courses (18 cr.)
- LIS S501 Reference
- LIS S504 Cataloging
- LIS S571 Materials for Youth
- LIS S574 Information Inquiry for School Teachers
- LIS S605 Internship in Library and Information Science
- LIS S671 School Media

Application of Technology to Instruction courses: 9 credits

Courses will be selected from the list below based on advisor’s recommendations
- LIS S516 Human-Computer Interaction
- LIS S532 Information Architecture for the Web
- LIS S533 Online Searching
- LIS S554 Library Systems
- LIS S573 Education of Information Users
- LIS S603 Workshops (Such as Electronic Materials for Children, or Technology Rich Learning, or Video Production, or Grant Writing)
- LIS S621 Audio and Video Sources
- LIS S622 Resources and Technologies for People with Disabilities
- LIS S652 Digital Libraries

To complete the MLS, students will also complete (9 cr.)
- LIS S502 Collection Development and Management
- LIS S505 Evaluation of Library Sources and Services
- LIS S506 Introduction to Research
- 1 Elective from LIS (3 cr.)

Establishing Valid Teaching Credentials: (27 credits + 15 credits)

Individuals who do not hold a valid teaching license may establish such as Teacher of Library Media by completing the above 27 credits as well as 15 credits selected from the menu of education courses below.

Additionally, a school media student teaching placement must be successfully completed within the state of Indiana. All education credits and all LIS credits are to be completed prior to starting the student teaching experience. The student must submit passing scores for the Praxis I (or an acceptable substitute) as part of their application to the student teaching program. Placement for student teaching is coordinated through Kym Kramer, Director of School Library Media, in coordination with the IU School of Education in Bloomington approximately nine to twelve months prior to the anticipated student teaching semester.

Exact education courses are in a state of change. Contact Kym Kramer kakramer@iupui.edu for the latest information.

Educational Psychology (3 cr.)

Choose one of the following courses.
- P444 Applied Cognition and Learning Strategies
- P510 Psychology in Teaching
- P514 Life Span Development
- P515 Child Development
- P516 Adolescent Development
- P525 Psychological Issues in Education
- P530 Instructional Psychology
- P540 Learning and Cognition in Education
- P545 Educational Motivation
- P575 Developing Human Potential

Philosophy of Education (3 cr.)

Choose one of the following courses.
- H340 Education and American Culture
- H510 Foundations of Educational Inquiry
- H520 Education and Social Issues
- H530 Philosophy of Education
- H538 Critical Thinking and Education
- H540 Sociology of Education
- H560 Education and Change in Societies

Curriculum and Technology (6 cr.)

Choose two of the following courses.
- W310 Computer-Based Teaching Methods
- E535 Elementary School Curriculum
- J500 Instruction in the Context of Curriculum
- J630 Curriculum Development and Theory
- K505 Intro to Special Education for Graduate Students
• K510 Assistive Technology in Special Education
• R503 Application of Instructional Media and Technology
• R505 Workshop in Instructional Systems Technology
• R547 Computer-Mediated Learning
• S503 Secondary School Curriculum
• W531 Computers in Education
• W540 Computers in the Curriculum

Reading and Literacy (3 cr.)
Choose one course from the following (L numbered courses are from Education, not LIS).
• L500 Instructional Issues in Language Learning
• L501 Critical Reading K-12
• L504 Learner Literacy Difficulties
• L511 Advanced Study in Teaching of Writing in Elementary Schools
• L512 Advanced Study in Teaching of Writing in Secondary Schools
• L517 Advanced Study of Teaching in Reading
• L524 Language Education Issues in Bilingual and Multicultural Education
• L545 Advanced Study of Teaching Elementary Reading
• L559 Trade Books in the Elementary Classroom
• L567 Media in the Teaching of English
• L645 Organization and Administration of a School Reading Program

Degree Programs
Master of Library Science
• Specialization in Library Technology Management

Dual Degree Programs
• Master of Library Science-Master of Arts in History
• Master of Library Science-Master of Science in Health Informatics
• Master of Library Science-Master of Arts in Philanthropic Studies
• Master of Library Science-Law (J.D.)

Other Programs
• Master of Library Science-Certificate in Public Management
• Master of Library Science-Certificate in Nonprofit Management
• Executive Management in Library Science Certificate

Dual Degree Programs
Library Science Dual Master’s Degree Programs

The programs described below are those where both programs have agreed to share some courses and reduce the total number of credits below what would be required to do both degrees independently. MLS coursework still needs to be completed within the 5 year time limit.

Goals
• Expand the career options for LIS graduate students
• Take advantage of the special strengths of the academic programs at IUPUI.

General Criteria for LIS Dual Programs
• Students must apply and meet admission requirements for both programs within the first academic year.
• Good standing requires a GPA of 3.0 in all coursework.
• Students complete a minimum of 30 graduate credits from LIS, including courses to satisfy the five core foundation areas and either S401 Computer Skills or a waiver.
• Dual degree programs are “campus specific,” with LIS coursework from Indianapolis and the other program credits offered at other IUPUI schools.
• The joint degree is subject to the admission and course requirements as approved by that unit in cooperation with LIS.
• Students will have an advisor from both units represented in the dual-degree program.
• Some dual degree programs allow for six graduate credits of internship.

Last updated: 02/12/2014

M.L.S. - Law (J.D.)
Dual Degrees: M.L.S. + J.D.

Designed for the student seeking directorship in an academic law library or management of a corporate law library. Credentials for this dual program are also important for advanced reference and electronic document management in a legal setting. Courses and internships will guide students to specialize in copyright law and issues related to intellectual property and intellectual freedom.

This is a 114 credit hour program.

Course Requirements:
From SLIS, 30 graduate credits including:

Foundations (15 credits):
• S501 Reference
• S502 Collection Development and Management
• S503 Organization and Representation of Knowledge and Information OR S504 Cataloging
• S551 Library Management OR S552 Academic Library Management
• S505 Evaluation of Library Sources and Services OR S506 Introduction to Research

Specialization core:
• S605 Internship (Permission of faculty advisor)
- S654 Law Librarianship

**Information Technologies** (9 credits):
- S522 Social Science Information (P: S401 & S501)
- S523 Science and Technology Information (P: S401 & S501)
- S525 Government Information (P: S401 & S501)
- S526 Business Information (P: S401, S501)
- S533 Online Searching (P: S401)
- S541 Information Policy
- S640 Seminar Intellectual Freedom (P: 9 SLIS hours)

Also 84 credit hours is required from Law School for more requirements.

@LISAdvisor: Dr. Rachel Applegate, rapplega@iupui.edu
@Lastupdated:02/12/2014

**M.L.S. - M.A. in History**
**Dual Degrees: M.L.S. + M.A. in History**

Interest in public history, genealogy, historic preservation, and archives and museum administration creates a demand for professionals with expertise in both historical research and information management. The dual M.L.S.–M.A. in history program requires completion of a minimum of 53 credit hours of graduate course work.

Students must apply for admission to the master’s programs of both the School of Library and Information Science and the Department of History and meet the admission criteria established for each. The two degrees must be awarded simultaneously.

This is a 53 credit hour program.

30 SLIS credit hours

**Course Requirements:**

**Prerequisite:**
- S401 Computer Based Information Tools (3 credit Pass/Fail)

**Foundations** (15 credits):
- S501 Reference
- S502 Collection Development and Management
- S503 Organization and Representation or S504 Cataloging
- S505 Evaluation of Library Sources and Services or S506 Introduction to Research
- S551 Library Management or S552 Academic Library Management
- S553 Public Library Management
- S556 Systems Analysis and Design

**Library History and Literature** (6 credits): SLIS in library history and literature from the following:
- S521 Humanities Information
- S522 Social Sciences Information
- S525 Government Information
- S582 Preservation
- S623 Genealogy and Local History
- S652 Digital Libraries
- S680 The Book to 1450
- S681 The Book 1450 to Present

**Information Technologies** (9 credits):
- S532 Information Architecture for the Web
- S533 Online Searching
- S541 Information Policy
- S554 Library Systems
- S556 Systems Analysis and Design
- S605 Internship

A minimum of 23 credit hours is required in the Department of History for the Master of Arts degree, including H547.

**SLIS Advisor:** Dr. Rachel Applegate, rapplega@iupui.edu

**M.L.S. - M.A. in Philanthropic Studies**
**Dual Degrees: M.L.S. + M.A. in Philanthropic Studies**

Designed for the student seeking a management career with libraries and other nonprofit institutions. Content includes gaining expertise in management of special library programs, fund-raising and endowment management, capital project management and leadership in academic, corporate or large public libraries.

**Prerequisite**
- LIS S401 Computer Based Information Tools or Waiver

**Course Requirements**

This is a 51 credit hour program.

From LIS 30 graduate credit hours.

**Foundations (15 cr.)**
- LIS S501 Reference
- LIS S503 Organization and Representation of Knowledge and Information OR LIS S504 Cataloging
- LIS S551 Library Management OR LIS S552 Academic Library Management OR LIS S553 Public Library Management
- LIS S556 Introduction to Research

**Library Philanthropy Core (9 cr.)**
- LIS S650 Library Philanthropy
- LIS S541 Information Policy
- LIS S605 Internship in a Philanthropic Environment

**General Electives (6 cr.)**

From Philanthropy (21 cr.)
- A509 Cross-Cultural Dimensions
- H511 History of Philanthropy (United States)
- P512 Human and Financial Resources in Philanthropy
- P521 Nonprofit and Voluntary Sector
- P523 Civil Society and Public Policy
- P542 Ethics and Values in Philanthropy
- P590 Internship in Philanthropic Studies

For more information, visit www.philanthropy.iupui.edu.

**M.L.S. - M.S. in Health Informatics**
**Dual Degrees: M.L.S. + M.S. in Health Informatics**
Designed for the student seeking a career in the field of health information management with opportunities in health sciences libraries, academia, information technology (IT), hospital management, hospital information systems, corporate research centers, and corporate IT.

This is a 60 credit hour program.

Course Requirements:

30 Credit Hours SLIS + S401

Prerequisite (3 credits):
- S401 Computer Based Information (Pass/Fail)

Core Requirements (18 credits):
- S501 Reference
- S502 Collection Development and Management
- S503 Organization and Representation of Knowledge and Information
- S506 Introduction to Research
- S533 Online Searching
- S653 Health Sciences Librarianship

Directed SLIS Electives (12 credits; substitute from general electives below with advisor’s consent):
- S505 Evaluation of Library Sources and Services
- S511 Database Design
- S574 Information Inquiry [Education of Users]
- S604 Consumer Health Informatics
- S622 Resources and Services for People with Disabilities

General LIS Electives
- S504 Cataloging
- S516 Human Computer Interaction
- S517 Web Programming
- S523 Science and Technology Information
- S532 Information Architecture for the Web
- S541 Information Policy
- S554 Library Systems
- S556 Systems Analysis and Design
- S573 Education of Information Users
- S605 Internship in Library and Information Science (Permission of faculty advisor)
- S652 Digital Libraries

Informatics Requirements

24 graduate credits plus 6 thesis credits.

See also, the Health Informatics degree requirements.

LIS Advisor: Dr. Oliver Chen (chenhsin[at]iupui[dot]edu)

Last updated: 02/12/2014

Master of Library Science

Library Science Master’s Degree

The Master of Library Science (M.L.S.) program prepares students to become reflective practitioners who connect people and communities with information.

Degree Requirements

A candidate for the Master of Library Science degree must complete 36 semester credit hours of graduate coursework, all of which must be taken from the Department of Library and Information Science. A maximum of 6 graduate credit hours from another ALA-accredited master’s degree program may, with the permission of the dean, be applied to the M.L.S. degree. In addition students must take the prerequisite computer skills course, LIS S401 Computer-Based Information Tools (or equivalent experience).

Your course of study builds a foundation in five areas of librarianship, then allows you to work with your advisor to choose advanced elective courses to develop the knowledge and skills for your career.

Prerequisite (3 cr.)

Must be fulfilled before completion of 9 credit hours
- LIS S401 Computer-Based Information Tools or S401 Waiver

Foundation (15 cr.)

Choose one course from each area:

Assist and Educate Users of Libraries and Information Centers
- LIS S501 Reference (3 cr.)

Develop and Manage Library Collections
- LIS S502 Collection Development and Management (3 cr.)

Organize and Represent Information Resources
- LIS S503 Organization and Representation of Knowledge and Information (3 cr.)
- LIS S504 Cataloging (3 cr.)

Apply Management and Leadership Skills
- LIS S551 Library Management (3 cr.)
- LIS S552 Academic Library Management (3 cr.)
- LIS S553 Public Library Management (3 cr.)
- LIS S671 School Media (3 cr.)

Conduct and Analyze Research
- LIS S506 Introduction to Research (3 cr.)
- LIS S505 Evaluation of Library Sources and Services (3 cr.)

Electives (21 cr.)

May include up to 3 credit hours of internships, up to 6 credit hours of LIS workshops and up to 6 credits (with advisor approval) of SOIC coursework from other departments.

Last updated: 02/10/2014

MLS with Specialization in Library Technology Management

Library Science Master’s Degree with Technology Management Specialization

The Master of Library Science with a specialization in Library Technology Management is a 45 credit hour program.
Prerequisite

• **LIS S401 Computer-Based Information Tools** (3 credits) or Waiver

Foundations (15 cr.)

One course from each area below:

Assist and Educate Users of Libraries and Information Centers

• **LIS S501 Reference**

Develop and Manage Library Collections

• **LIS S502 Collection Development and Management**

Organize and Represent Information Resources

• **LIS S503 Organization and Representation of Knowledge and Information**

Applied Management and Leadership Skills

• **LIS S551 Library Management**
• **LIS S552 Academic Library Management**
• **LIS S553 Public Library Management**
• **LIS S671 School Media**

Conduct and Analyze Research

• **LIS S506 Introduction to Research**
• **LIS S519 Evaluation of Information Systems**
• **LIS S505 Evaluation of Library Sources and Services**

Specialization Core (9 cr.)

• **LIS S504 Cataloging**
• **LIS S554 Library Systems**
• **LIS S533 Online Searching**

Specialization Electives (15 cr.)

Technology application courses selected from the following or chosen in consultation with the student’s faculty advisor:

• **LIS S556 Systems Analysis and Design**
• **LIS S511 Database Design**
• **LIS S516 Human-Computer Interaction**
• **LIS S621 Audio and Video Sources**
• **LIS S532 Information Architecture for the Web**
• **LIS S652 Digital Libraries**
• **LIS S603 LIS Workshops**

Outside Courses

Up to 6 hours with advisor’s approval.

General Electives (6 cr.)

Selected from any LIS elective courses. Internship options for up to six credit hours are available.

Some courses are offered at Department of Information and Library Science in Bloomington. Indianapolis students can take up to 9 credit hours at in the Department of Information and Library Science in Bloomington.

Last updated: 02/10/2014

**MLS with Specialization in Academic Librarianship**

Master of Library Science Academic Librarianship Specialization

Candidates in this specialization will receive the MLS degree and the Academic Librarianship Specialization which will be noted on the transcript.

Prerequisite

• **LIS S401 Computer-Based Information Tools** (3 credits) or Waiver

Foundations (15 cr.)

One course from each area below:

Assist and Educate Users of Libraries and Information Centers

• **LIS S501 Reference**

Develop and Manage Library Collections

• **LIS S502 Collection Development and Management**

Organize and Represent Information Resources

• **LIS S503 Organization and Representation of Knowledge and Information**

Applied Management and Leadership Skills

• **LIS S551 Library Management**
• **LIS S552 Academic Library Management**
• **LIS S553 Public Library Management**
• **LIS S671 School Media**

Conduct and Analyze Research

• **LIS S506 Introduction to Research**
• **LIS S519 Evaluation of Information Systems**
• **LIS S505 Evaluation of Library Sources and Services**

Required Specialization Courses (9 cr.)

• **LIS S574 Instructional Strategies for Library and Information Professionals**
• **LIS S533 Online Searching**
• **LIS S604 Scholarly Communication**

Recommended Electives (12 cr.)

• Electives for Specialization:
  • **LIS S522 Social Science Information**
  • **LIS S652 Health Sciences Librarianship**
  • **LIS S654 Law Librarianship**

• Electives, Technology-Focused:
  • **LIS S532 Information Architecture for the Web**
  • **LIS S554 Library Systems**
  • **LIS S652 Digital Libraries**

• Electives, General:
  • **LIS S550 Perspectives on Librarianship**
  • **LIS S603 Grant Writing**
  • **LIS S622 Resources and Services for People with Disabilities**

Last updated: 02/10/2014

**MLS with Specialization in Adult Services**
Master of Library Science Public Librarianship/Adult Services Specialization

Candidates in this specialization will receive the MLS degree and the Public Librarianship/Adult Services Specialization which will be noted on the transcript.

Prerequisite

- **LIS S401 Computer-Based Information Tools** (3 credits) or Waiver

Foundations (15 cr.)

One course from each area below:

**Assist and Educate Users of Libraries and Information Centers**

- **LIS S501 Reference**

**Develop and Manage Library Collections**

- **LIS S502 Collection Development and Management**

**Organize and Represent Information Resources**

- **LIS S503 Organization and Representation of Knowledge and Information**

**Applied Management and Leadership Skills**

- **LIS S551 Library Management**
- **LIS S552 Academic Library Management**
- **LIS S553 Public Library Management**
- **LIS S671 School Media**

**Conduct and Analyze Research**

- **LIS S506 Introduction to Research**
- **LIS S519 Evaluation of Information Systems**
- **LIS S505 Evaluation of Library Sources and Services**

**Required Specialization Courses (6 cr.)**

- **LIS S524 Adult Reader's Advisory**
- **LIS S604 Public Library Services**

**Recommended Electives (15 cr.)**

**MLS with School Library Specialization**

Master of Library Science School Library Specialization

Candidates in this specialization will receive the MLS degree and the School Library Specialization which will be noted on the transcript.

**Prerequisite**

- **LIS S401 Computer-Based Information Tools** (3 credits) or Waiver

**Foundations (15 cr.)**

One course from each area below:

**Assist and Educate Users of Libraries and Information Centers**

- **LIS S501 Reference**

**Develop and Manage Library Collections**

- **LIS S502 Collection Development and Management**

**Organize and Represent Information Resources**

- **LIS S503 Organization and Representation of Knowledge and Information**

**Applied Management and Leadership Skills**

- **LIS S551 Library Management**
- **LIS S552 Academic Library Management**
- **LIS S553 Public Library Management**
- **LIS S671 School Media**

**Conduct and Analyze Research**

- **LIS S506 Introduction to Research**
- **LIS S519 Evaluation of Information Systems**
- **LIS S505 Evaluation of Library Sources and Services**

**Required Specialization Courses (9 cr.)**

- **LIS S571 Materials for Youth**
- **LIS S574 Instructional Strategies for Library and Information Professionals**
- **LIS S605 Internship in Library and Information Science** (in school library or youth services department of public library unless waived in writing or email by advisor and submitted to Department of Library and Information Science office for the student academic record)

**Recommended Electives (12 cr.)**

- **LIS S516 Human-Computer Interaction**
- **LIS S532 Information Architecture for the Web**
- **LIS S533 Online Searching**
- **LIS S603 Workshops in Library and Information Science** (Science, Electronic Materials for Children, Marketing for Libraries and Grant Writing)
Marketing for Libraries, High Tech Learning, Grant Writing, others with consent of advisor; up to 6 credits
- LIS S621 Audio and Video Sources
- LIS S622 Resources and Services for People with Disabilities
- LIS S640 Seminar on Intellectual Freedom
- LIS S672 Seminar on Literature for Youth

Last updated: 02/10/2014

**MLS with Technical Services Specialization**

**Master of Library Science Technical Services Specialization**

Candidates in this specialization will receive the MLS degree and the Technical Services Specialization which will be noted on the transcript.

**Prerequisite**
- LIS S401 Computer-Based Information Tools (3 credits) or Waiver

**Foundations (15 cr.)**

One course from each area below:

**Assist and Educate Users of Libraries and Information Centers**
- LIS S501 Reference

**Develop and Manage Library Collections**
- LIS S502 Collection Development and Management

**Organize and Represent Information Resources**
- LIS S503 Organization and Representation of Knowledge and Information

**Applied Management and Leadership Skills**
- LIS S551 Library Management
- LIS S552 Academic Library Management
- LIS S553 Public Library Management
- LIS S671 School Media

**Conduct and Analyze Research**
- LIS S506 Introduction to Research
- LIS S519 Evaluation of Information Systems
- LIS S505 Evaluation of Library Sources and Services

**Required Specialization Courses (9 cr.)**
- LIS S631 Advanced Cataloging
- LIS S632 Technical Services
- LIS S652 Digital Libraries

**Recommended Electives (12 cr.)**
- LIS S516 Human-Computer Interaction
- LIS S525 Government Information
- LIS S532 Information Architecture for the Web
- LIS S533 Online Searching
- LIS S541 Information Policy
- LIS S554 Library Systems
- LIS S580 History of Libraries
- LIS S581 Archives and Records Management
- LIS S582 Preservation
- LIS S605 Internship in Library and Information Science
- LIS S621 Audio and Video Sources
- LIS S634 Seminar on Intellectual Freedom

Last updated: 02/10/2014

**MLS with Youth Services Specialization**

**Master of Library Science Youth Services Specialization**

Candidates in this specialization will receive the MLS degree and the Youth Services Specialization which will be noted on the transcript.

**Prerequisite**
- LIS S401 Computer-Based Information Tools (3 credits) or Waiver

**Foundations (15 cr.)**

One course from each area below:

**Assist and Educate Users of Libraries and Information Centers**
- LIS S501 Reference

**Develop and Manage Library Collections**
- LIS S502 Collection Development and Management

**Organize and Represent Information Resources**
- LIS S503 Organization and Representation of Knowledge and Information

**Applied Management and Leadership Skills**
- LIS S551 Library Management
- LIS S552 Academic Library Management
- LIS S553 Public Library Management
- LIS S671 School Media

**Conduct and Analyze Research**
- LIS S506 Introduction to Research
- LIS S519 Evaluation of Information Systems
- LIS S505 Evaluation of Library Sources and Services

**Required Specialization Courses (9 cr.)**
- LIS S571 Materials for Youth
- LIS S572 Youth Services
- LIS S672 Seminar on Literature for Youth

**Recommended Electives (12 cr.)**
- LIS S532 Information Architecture for the Web
- LIS S541 Information Policy
- LIS S603 Workshops (Electronic Materials for Children; Storytelling; Emergent Literacy; others with consent of advisor)
- LIS S604 Topics in Library and Information Science (Storytelling; others with consent of advisor)
- LIS S605 Internship in Library and Information Science (Internship must be approved by the Director of the Specialization)
- LIS S621 Audio and Video Sources
In addition to the Master's in Library Science degree program, the Department of Library and Information Science offers the following certificates:

- Executive Management in Library Science Certificate
- Master of Library Science-Certificate in Nonprofit Management
- Master of Library Science-Certificate in Public Management

**Executive Management in Library Science Certificate**

The Executive Graduate Certificate in Library Management is designed for students who have completed a Master’s degree in Library or Information Science and wish to obtain organizational management skills through the SPEA certificate.

Career employees of public and private sector agencies seeking courses in public management, and especially those changing from professional or technical roles to managerial roles, will find this certificate program beneficial.

This is a 15 credit hour program.

**All SPEA Courses are offered both online as well as in residence.**

**Admission Eligibility**

1. All applicants must have completed a Master's Degree in Library and Information Sciences.
2. Complete the online application.*
3. Admission requires only the approval of the respective graduate program director or SPEA campus director.

*Information on the application may be obtained from the SPEA website; materials are also available from the Graduate Program Office. Application deadlines are before May 15 for the fall semester, before September 15 for the spring semester, and before March 15 for summer sessions. Students must pay a nonrefundable application fee.

**Public Management Track Requirements (15 credit hours)**

- SPEA-V 502: Public Management (3 credit hours)
- SPEA-V 560: Public Finance and Budgeting (3 credit hours)
- SPEA-V 561: Public Human Resource Management (3 credit hours)
- SLIS-S 505: Evaluation of Library Sources and Services (3 credit hours)
- SLIS-S 605: Internship in Library and Information Science: Community Leadership and Management (3 credit hours)

**Nonprofit Management Track Requirements (15 credit hours)**

- SPEA-V 522: Human Resources Management in Nonprofit Organizations (3 credit hours)
- SPEA-V 525: Management in Nonprofit Sector (3 credit hours)
- SPEA-V 526: Financial Management for Nonprofit Organizations (3 credit hours)
- SLIS-S 505: Evaluation of Library Sources and Services (3 credit hours)
- SLIS-S 605: Internship in Library and Information Science: Community Leadership and Management (3 credit hours)

*Designed for the student seeking courses that address management skills relevant to those who may direct academic, public or corporate libraries. Academic exercises will acquaint students with issues in human resource management, public finance, and dealing with governance bodies such as a board of directors. Courses from the School of Public and Environmental Administration (SPEA) are available either on campus or online. For more information, visit www.spea.iupui.edu*

This is a 42 credit hour program.

**Course Requirements:**

From SLIS, 30 graduate credits including:

- S501 Reference
- S502 Collection Development and Management
- S503 Organization and Representation of Knowledge and Information or S504 Cataloging
- S505 Evaluation of Library Sources and Services or S506 Introduction to Research
- S551 Library Management to meet the foundation area requirements, and including
- 15 SLIS elective credits that should include
  - S526 Business Information or S535
  - S533 Online Searching
  - S541 Information Policy or S640 Seminar in Intellectual Freedom
  - S552 Academic Library Management or S553 Public Library Management, and
  - S605 Internship in Library and Information Science as an administrative assistant.

From SPEA, for the Nonprofit Management Certificate, 12 graduate credits that include:

- V522 Human Resource Management in Nonprofit Organizations,
- V525 Management in the Nonprofit Sector,
- V526 Financial Management for Nonprofit Organizations, and
- one 3-credit elective from Nonprofit and Voluntary Sector, Ethics and Values of Philanthropy, Fund Development for Nonprofit Organizations, Public Relations in Nonprofits, or History of Philanthropy.
M.L.S. with Certificate in Nonprofit Management
M.L.S. with Certificate in Public Management

Designed for the student seeking courses that address management skills relevant to those who may direct academic, public or corporate libraries. Academic exercises will acquaint students with issues in human resource management, public finance, and dealing with governance bodies such as a board of directors. Courses from the School of Public and Environmental Administration (SPEA) are available either on campus or online. For more information, visit www.spea.iupui.edu

This is a 42 credit hour program.

Course Requirements:
From LIS, 30 graduate credits including:

- SS01 Reference
- SS02 Collection Development and Management
- SS03 Organization and Representation of Knowledge and Information or SS04 Cataloging
- SS05 Evaluation of Library Sources and Services or SS06 Introduction to Research
- SS51 Library Management to meet the foundation area requirements, and including
- 15 SLIS elective credits that should include
  - SS26 Business Information or SS35
  - SS33 Online Searching
  - SS41 Information Policy or SS40 Seminar in Intellectual Freedom
  - SS52 Academic Library Management or SS53
  - SS605 Internship in Library and Information Science as an administrative assistant.

From SPEA, for the Public Management Certificate, 12 graduate credits that include:

- V502 Public Management,
- V560 Public Finance and Budgeting,
- V561 Public Personnel Management, and

V506 Statistical Analysis for Public Affairs.

M.L.S. Student Learning Outcomes
Master of Library Science (M.L.S.)

The Master of Library Science is a 36-credit-hour program accredited by the American Library Association. The program is innovatively designed to meet the new challenges of our profession. Students in the program are introduced to the roles and functions of libraries in contemporary society. They become familiar with key policy issues and technological trends, and with how these issues and trends affect libraries and information centers of all kinds.

Students learn to manage and evaluate collections, respond to the information needs of patrons, and to use technology to improve access to information. Students who complete the program are prepared for careers in library administration, public services, technical services, reference services, and collection development at public, school, academic, and special libraries.

Upon completion of the M.L.S. program, graduates will be prepared to:

Assist and Educate Users

- Analyze and identify the information needs of diverse communities of users
- Educate users and potential users to locate, use, and evaluate information resources and tools
- Analyze and evaluate information systems and services in a variety of settings

Develop and Manage Collections of Information Resources

- Design and apply policies and procedures that support the selection and acquisition of information resources for particular communities of users
- Manage, evaluate, and preserve physical and virtual collections of information resources
- Uphold ethical and legal standards in acquiring, leasing, preserving, and providing access to information resources

Represent and Organize Information Resources

- Understand and apply principles of representation and organization

Manage and Lead Libraries and Other Information Organizations

- Perform basic managerial functions, including planning, budgeting, and performance evaluation
- Communicate effectively to a variety of audiences
- Apply theories of organizational behavior and structure

Use Research Effectively

- Design, conduct, interpret, and take action based upon research and evaluation

Deploy Information Technologies in Effective and Innovative Ways

- Implement and evaluate information and communication technologies for efficiency, usability, and value to users

Approach Professional Issues with Understanding

- Understand the social, political, ethical, and legal aspects of information creation, access, ownership, services, and communication
- Anticipate emerging trends and respond proactively

Computer Accounts

Department of Library and Information Science Policies

Computer Accounts

All SLIS students are eligible for, and are required to obtain, computer accounts from University Information Technology Services. These accounts include an electronic mail component, which is utilized by SLIS for both official and unofficial communication. Student job openings, scholarship and financial aid opportunities, deadlines for submission of official paperwork, and
announcements of social functions are just a few examples of the information disseminated via electronic communication.

Students will be held responsible for receiving and responding as appropriate to all official electronic mail. It is University policy that communication sent to the student via the student's electronic mail campus address is considered official notice. Each SLIS student should use their campus electronic-mail address to join the School's Listserv at slis-indy@iupui.edu. Contact the SLIS for details.

Note: All courses except S581 Archives and Records Management are offered online. Students need up to date computers as well as reliable high-speed internet connections. See the technology requirements on the departmental website.

Last updated: 02/10/2014

Financial Aid
A student must be admitted to a graduate degree program in order to be eligible for financial aid from SLIS. Students with financial assistance must make adequate progress toward their degree each semester and meet all other requirements of the award, or financial support may be discontinued.

Stipends and salaries earned by graduate students are taxable. It is our understanding that fellowships and fee scholarships are not taxable under current regulations; however, it is the responsibility of each recipient to confirm the tax status of any award with the Internal Revenue Service.

Financial Aid on the IUPUI Campus Several student hourly positions are offered each year for MLS students working with the School of Library and Information Science. Each position is paid an hourly wage for 20 hours per week. There are no deadlines but decisions for a semester are completed usually 2-3 months ahead of that semester. Email a cover letter (include semester you want to be considered) and your resume to soiclis@iupui.edu.

Fellowship Awards One-time cash fellowship awards to new and continuing students in the SLIS degree programs are awarded through the following organizations:

Indiana Library Federation Scholarships are awarded annually by the ILF to students who are Indiana residents, have economic need, and are studying or wish to study for a career in librarianship. Awards are made each spring, and recipients must agree to work in an Indiana library for one year following degree receipt. Details for application are publicized each spring by SLIS and the ILF. These scholarships average between $300 and $1,000. More information is available on the ILF's website.

Association for Indiana Media Educators Scholarship is offered to students planning a career in Indiana school library media centers. Application details are published by the association and SLIS when they become available. These scholarships average between $300 and $600.

A.L.A. Scholarship Program See the A.L.A.'s website for more information. IUPUI Graduate Advisory Council considers applicants from SLIS for Fellowships annually. Applicants are selected from students who have an outstanding academic record. These fellowships are normally for two years, with an annual $12,000 stipend and in-state fee remission.

Other financial aid opportunities are publicized by the school as they become available. This information is available primarily on the SLIS-INDY e-mail list.

Student loans and other financial aid opportunities are available to graduate students at IUPUI. Contact:
Office of Student Financial Aid
CA 103, 425 N. University Boulevard
Indianapolis, IN 46202-5145
phone: (317) 274-4162
www.iupui.edu/~finaid/

International student aid from the School of Library and Information Science is very limited. Aid available from the school for matriculating students is normally restricted to U.S. citizens and permanent residents. In some cases, a continuing international student will receive financial assistance following the first semester in SLIS, but in no case does the available aid approach the entire amount needed for the support of an international student attending a graduate degree program at Indiana University.

International students are advised not to count on any financial assistance from the school, but to seek sponsorship and support from other sources. The university will not issue visa documentation until the international student submits evidence of complete financial support. Information on other financial aid for international students may be obtained from the:

IUPUI Office of International Affairs
902 W. New York St.,
ES 2126
Indianapolis, IN 46202 USA
phone: (317) 274-7200
www.iupui.edu/oxia/

Last updated: 02/10/2014

Grading Policy
Definition of Grades

Instructors in the School of Library and Information Science use a grading system that includes plus and minus grades as well as straight letters. Numerical equivalents for these grades are as follows and typical for a grade point average figured on a 4.0 scale.

Individual faculty members may apply different methods to computate and justify the letter grades awarded. A grade issued by a SLIS instructor for a course project, test, or final grade for the course carries the meaning as described below.

Letter grades have been defined as follows by student and faculty members of the Curriculum Steering Committee and have been approved by the faculty as an aid in evaluation of academic performance. These definitions should assist students by giving them an understanding of the grading standards of the School of Library and Information Science and reflecting the expectation that successful graduate students perform at the grade level of B or higher.

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A (4.0)</td>
<td>Outstanding achievement. Student performance</td>
</tr>
</tbody>
</table>
demonstrates full command of the course materials and evinces a high level of originality and/or creativity that far surpasses course expectations. The grade of A+ is not granted in SLIS, except in very exceptional cases.

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A- (3.7)</td>
<td>Excellent achievement. Student performance demonstrates thorough knowledge of the course materials and exceeds course expectations by completing all requirements in a superior manner.</td>
</tr>
<tr>
<td>B+ (3.3)</td>
<td>Very good work. Student performance demonstrates above-average comprehension of the course materials and exceeds course expectations on all tasks as defined in the course syllabus.</td>
</tr>
<tr>
<td>B (3.0)</td>
<td>Good work. Student performance meets designated course expectations, demonstrates understanding of the course materials, and performs at an acceptable level.</td>
</tr>
<tr>
<td>B- (2.7)</td>
<td>Marginal work. Student performance demonstrates incomplete understanding of course materials.</td>
</tr>
<tr>
<td>C+ (2.3)</td>
<td>Unsatisfactory work and inadequate understanding of course materials.</td>
</tr>
<tr>
<td>C (2.0)</td>
<td>Unacceptable work; course work performed at this level will not count toward the M.L.S. or M.I.S. degree; for the course to count toward the degree, the student must repeat the course with a passing grade.</td>
</tr>
<tr>
<td>C- (1.7)</td>
<td></td>
</tr>
<tr>
<td>D+ (1.3)</td>
<td></td>
</tr>
<tr>
<td>D (1.0)</td>
<td></td>
</tr>
<tr>
<td>D- (0.7)</td>
<td></td>
</tr>
<tr>
<td>F (0.0)</td>
<td>Failing. Student may continue in program only with permission of the dean.</td>
</tr>
</tbody>
</table>

Grades are assigned by individual instructors based on a combination of student performance measures developed for each course. Student achievement of course objectives is usually assessed through the use of multiple performance measures. For example, a combination of several of the following assessment methods is common: examinations, class participation, written assignments and exercises, research papers, or term projects. Other methods, depending on course content and objectives, may include in-class small group exercises, oral presentations, field-based projects and field experiences, role-playing, or case study presentation.

No course in which a student receives a grade lower than C (2.0) will be counted toward requirements for any SLIS degree. Effective Fall 2010, any required course on which a grade lower than B- is received must be repeated; an elective course on which a grade lower than B- is earned need not be repeated, but it may be repeated or another course must be taken in its place. Repeating an unacceptable course or taking another in its place does not remove the credit points for that course from a student’s cumulative grade point average. All grades achieved in SLIS courses will be counted in the SLIS and IU GPA. Since a minimum GPA of 3.0 (B) is required for graduation, any grade below B must be balanced by another sufficiently above B to keep the GPA at the 3.0 level.

A “grade” of S for Satisfactory or U for Unsatisfactory is issued for such courses as S401 Computer Based Information Tools and S605 Internship.

**Grade of Incomplete (I)**

The grade of Incomplete (I) may be used on the final grade report at the discretion of the instructor. The grade I indicates that the student’s work in a course is satisfactory thus far but has not been completed as of the end of the semester.

The grade of Incomplete may be given only when the completed portion of a student’s work in a course is of passing quality, and may be awarded only upon showing hardship to the student that would make it unjust to hold the student to the original time limit for course completion. It is the responsibility of the student who has incurred a grade of Incomplete in any course to fulfill the requirements of that course within a maximum of one calendar year from the date on which the I grade is recorded. An earlier date may be established by the instructor involved based on the individual circumstances of the student and the course involved. After one calendar year, a grade of Incomplete automatically changes to a grade of F on the student’s record.

**Summer Sessions**

The School of Library and Information Science offers one of the largest selections of summer classes proportional to school enrollment. The two summer sessions are six weeks in length, from early May to mid-June and from mid-June to mid-August.

It is possible for some students to complete a SLIS master’s degree by attending only summer sessions over the period of five years allowed for degree completion. Students are cautioned, however, that not all courses are or will be available during summer sessions.

**Academic Policies & Procedures**

**Department of Library and Information Science**

**Policies**

**Computer Accounts**

All SLIS students are eligible for, and are required to obtain, computer accounts from University Information Technology Services. These accounts include an
Masters Level Courses

SLIS-S 501 Reference (3 cr.) P: or Concurrent S401. This course introduces students to the basic information sources and services among different types of libraries and information centers, including academic, public, special, and school media.

SLIS-S 502 Collection Development and Management (3 cr.) Collection Development and Management examines the principles and techniques that guide the development, management, and evaluation of library collections and the selection of materials in various types of libraries. The course provides students with experience in the major phases involved in starting and developing collections of print and non-print materials: the formulation of collection development plans, the selection of materials, and the evaluation and preservation of library collections. It enables students to recognize and respond to challenges and opportunities of special interest to collection developers including changes in the production and distribution of information resources, issues of access and ownership, intellectual freedom, copyright, and resource sharing.

SLIS-S 503 Organization and Representation of Knowledge and Information (3 cr.) Introduces students to various disciplines' approaches to the understanding, organization, representation (summarizing), and use of knowledge and information. This survey looks for commonality among the approaches taken in information science, cognitive psychology, semiotics, and artificial intelligence, among others. The goal is to identify criteria for evaluation and improvement of ways to organize and represent information for future retrieval. Information systems currently used in libraries and information centers will be studied as examples. Emphasis in the course is on concepts and ideas, with appropriate attention to terminology and technology.

SLIS-S 504 Cataloging (3 cr.) P: S401. Historical development and principles essential to the understanding of the conceptual foundations of providing bibliographic access and control of materials and information. Discussion and examples in the application of AACR2r will be presented to illustrate and reflect current practice. Emphasis is on monographic publications.

SLIS-S 505 Evaluation of Library Sources and Services (3 cr.) P: S502. Examines the applied evaluation of library resources and services, including collections, document delivery, technical services, reference services, and overall library performance. Emphasis is placed on the available methods and methodological issues. The checklist method, availability studies, document delivery tests, use studies, applied bibliometrics, and the use of automation are covered.

SLIS-S 506 Introduction to Research (3 cr.) P: S401, completion of 6 credit hours in SLIS (S501 and S502 recommended), or consent of instructor. Introduces the research process, including concepts, design, conduct, and evaluation. Examines the principles and characteristics of approaches and methodologies relevant to research in the field. Examples of data sources and introduction to methods of statistical description and analysis; ethical issues.

SLIS-S 511 Database Design (3 cr.) P: S401 or consent of instructor. Concerned with a comprehensive view of the processes involved in developing formal access to information from a user-centered point of view. Considers various database models (such as flat file, hierarchical, and relational), and hypertext (in terms of text, sound, numeric, image, and geographic data). Students will design and implement databases using several commercial database management systems.

SLIS-S 516 Human-Computer Interaction (3 cr.) Examines the human factors associated with information technology and seeks to provide students with knowledge of the variables likely to influence the perceived usability, and hence the acceptability, of any information technology. In so doing, it will enable students to progress further toward specialist work in the important field of human-computer interaction.

SLIS-S 517 Web Programming (3 cr.) The main focus of this course is to instruct students to develop and implement dynamic and interactive web applications. In order to do so, students will learn the basics of an open source programming language both through lectures and hands-on exercises in the lab.

SLIS-S 519 Evaluation of Information Systems (3 cr.) P: S401. Theoretical and practical exploration of the issues surrounding contemporary information systems. A specific focus will be on evaluating information systems from the user perspective. This evaluation approach will cut across disciplinary frameworks: behavioral, cognitive, and social sciences. The approach will also touch on multiple research methods: online surveys, sense-making, critical incident, and network analysis.

SLIS-S 521 Humanities Information (3 cr.) P: S501 or consent of instructor. Introduction to information sources and services in the disciplines of performing arts, music, fine arts, literature, language, philosophy, and religion. In addition, the course addresses information needs and behavior patterns of users seeking these types of information.

SLIS-S 522 Social Sciences Information (3 cr.) P: S401 and S501 or consent of instructor. Study of the core information tools in the field of anthropology, economics, history, political science, psychology, and sociology. Includes key bibliographic databases and electronic
network tools. Evaluation of research dealing with information channels in these fields.

**SLIS-S 523 Science and Technology Information (3 cr.)**
P: S401 and S501. General materials, reference books, periodicals, government documents, nonbook media in the individual literature of individual disciplines; patents and report literature. Examination of production, publication, distribution, and forms of scientific and technical literature.

**SLIS-S 524 Adult Readers Advisory (3 cr.)** P: S501 and S502. A review and discussion of trends reflected in subject content and use of book and nonbook materials for patrons in secondary school and public libraries in relation to changing young adult and adult needs and the role of libraries in meeting such needs.

**SLIS-S 525 Government Information (3 cr.)** P: S401 and S501. Survey of government information dissemination in all formats and at all levels of government. Consideration of government information policy. Primary emphasis given to U.S. government information but some consideration given to state and local publications in the United States, and those of international organizations.

**SLIS-S 526 Business Information (3 cr.)** P: S401 and S501 or consent of instructor. Introduction to basic business materials. Includes resources, research methods, current developments, automated systems, and databases.

**SLIS-S 532 Information Architecture for the Web (3 cr.)** P: S401. Focuses on website development. Students study information architecture as an approach for site organization and design, and learn about product management for complex web development tasks. In lab sessions, students work with markup languages and scripting and develop sites, typically for real clients, as well as local libraries.

**SLIS-S 533 Online Searching (3 cr.)** P: S401 or consent of instructor. Principles, methods, and techniques of advanced online information retrieval (IR). Characteristics of and search strategies for the use of bibliographic, referral, citation, fact, numeric, and full text databases and search systems. Considers standards, use of communications software, front-ends and micro-based IR systems, and creation of in-house databases.

**SLIS-S 541 Information Policy (3 cr.)** Data creation, publication, dissemination, and use occur in a complex social context. Legal and regulatory structures continue to evolve to control these processes. This course explores international and U.S. principles, laws, and regulations affecting the information industry. Focus varies with the topic; for example, copyright of electronic information sources or transborder data flow. May be repeated for credit when topic varies.

**SLIS-S 550 Perspectives on Librarianship (3 cr.)** Overview of the library as a social institution-historically, currently, and for the future-within social, economic, political, and cultural contexts. Focuses on the institution, the collections and formats, and the users to create an understanding of the role and importance of libraries. SS50 provides excellent opportunities to help students explore the library profession.

**SLIS-S 551 Library Management (3 cr.)** Management and administration of all types of libraries. Covers basics of organizational structure, planning, budget management, human resources issues and skills, and an understanding of the manager in the context of the organization.

**SLIS-S 552 Academic Library Management (3 cr.)** Management and administration of academic libraries, including specific material related to organization structure, planning, budget management, human resources issues and skills, and an understanding of the manager in the context of a higher education environment.

**SLIS-S 553 Public Library Management (3 cr.)** Management and administration of public libraries, including specific material related to organization structure, planning, budget management, human resources issues and skills, and an understanding of the manager in the context of a community environment.

**SLIS-S 554 Library Systems (3 cr.)** P: S401. Principles for the design, selection, implementation and management of automated systems of all types in libraries, including systems for technical services processing, reference and user services, and management. Focus is on present and future applications of technology in libraries, their technical features, and their implications for library services and management. When possible, some practical experience with a particular application will be provided.

**SLIS-S 555 Information Inquiry for School Teachers (3 cr.)** Evaluation and use of books, magazines, recordings, films, radio and television broadcasts, and other sources of information and recreation.

**SLIS-S 556 Systems Analysis and Design (3 cr.)** P: computer or consent of instructor. This course introduces the basic concepts underlying systems analysis and design, focusing on contextual inquiry/design and data modeling, as well as the application of those analysis techniques in the analysis and design of organizational information systems.

**SLIS-S 571 Materials for Youth (3 cr.)** Evaluation and use of books, magazines, recordings, films, radio and television broadcasts, and other sources of information and recreation.

**SLIS-S 572 Youth Services (3 cr.)** P: S571 or consent of instructor. This course emphasizes the history, philosophy, and description of children and young adult library services. It takes a holistic look at the role of the youth services librarian from planning and evaluation to specific services and programs, and examines the current and future outlook for this type of librarianship. Emphasis is on the public library, but cooperation with appropriate services and programs, such as school media centers, is also discussed.

**SLIS-S 573 Education of Information Users (3 cr.)** P: S401, S501 or S516. Introduces students to the roles of librarians in adult education in university and college libraries and in public libraries. The course explores information literacy, library instructional models, education and training theories, and practical approaches for optimizing learning opportunities in library-based settings. Information literacy standards from the American Library Association and other sources are explored and applied to instructional design and practice. S573 also introduces students to outcomes-based planning and evaluation, a process for planning library-based educational programs with outcomes, or specific learning objectives in mind.

**SLIS-S 574 Information Inquiry for School Teachers (3 cr.)** Information Inquiry for School Teachers (3
cr.; formerly L551) This course is intended to be an
opportunity for teachers and future teachers (including
school library media specialists as teachers) to practice
methods in critically thinking about information/media,
and to use the inquiry process as a means to teach their
students to be critical reviewers and communicators
as well. Application of national and state standards for
information literacy K - 12. Offered over the Internet.

SLIS-S 580 History of Libraries (3 cr.) Development of
libraries and information service from earliest times to the
present, with emphasis on the library in relation to social,
economic, cultural, and political trends.

SLIS-S 581 Archives and Records Management (3 cr.)
Introduces basic theories, methods, and significant
problems in archives and records management. The
course also discusses how archivists are responding
to the challenge of managing and preserving electronic
records.

SLIS-S 582 Preservation (3 cr.) Examines causes of
library and archival materials deterioration. Develops
conceptual framework and management perspective for
preservation programs using technical standards, program
development tools, scientific and administrative research
reports, and advocacy literature. Explores the new
information technologies and media as both preservation
tools and challenges.

SLIS-S 601 Directed Readings (1-4 cr.) P: Consent
of instructor. Readings and study in any area of library
or information science having an extensive literature.
A student may enroll for this course twice in the same
semester under different instructors. Normally S601
is completed under the direction of a full-time faculty
member. Readings done under S601 shall not duplicate
the content of any course now in the curriculum of the
School of Library and Information Science. Proposal Form
due by March 15th.

SLIS-S 602 Directed Research (1-3 cr.) P: Proposal
form and consent of instructor and 15 SLIS graduate
credit hours completed including S505 or S506. Individual
research in a problem in the field of library and information
science.

SLIS-S 603 Workshop in Library and Information
Science (1-3 cr.) Group study of specific problems in the
library and information field. Generally includes a hands-
on element. No more than 6 hours of S603 credit may be
used toward the requirements for any SLIS degree.

SLIS-S 604 Topics in Library and Information
Science (1-4 cr.) Study of specific topics in librarianship
and preservation. May be repeated for credit when topic
varies. Same course number used for different courses.

SLIS-S 605 Internship in Library and Information
Science (2-6 cr.) P: Permission of faculty advisor.
Graded S/F. Supervised internship in an information
management environment. Professionals in library and
information management mentor each graduate student.
Sixty on-site hours must be completed for each credit
earned. Students document their experiences through
journals, abstracts of related publications, and a final
presentation. Normally, at least 18 credits must be
completed before enrollment*. Guidelines and placement
listings are available on the SLIS website.

SLIS-S 621 Audio and Video Sources (3 cr.) P: S401
concurrent or consent of instructor. User-focused
approach to decision making in the digital audio and
video information environment. Emphasizes collection
development in support of user services, including
access to remote collections and evaluation of multimedia
materials and delivery mechanisms, and issues related to
emerging technologies. Scope includes adult and young
adult audiences.

SLIS-S 622 Resources and Services for People with
Disabilities (3 cr.) Access to information is essential
for sustained independence of people with disabilities.
This course studies materials, services, and assistive
technologies to support this access.

SLIS-S 623 Genealogy and Local History (3 cr.)
P: S401, S501, & S502. This course is designed to focus
on two specific collection areas: Genealogy Resources
and Indiana Resources. Students will work on developing
collection policies creating collections with limited funding,
and evaluating existing special collections. The class will
also look at the pros and cons of several issues (staffing
issues, volunteers, integrated collections, circulating/non-
circulating, limited resources, material types).

SLIS-S 631 Advanced Cataloging (3 cr.) P: S504.
Provides extensive background in description and access
for electronic and non-book resources.

SLIS-S 632 Technical Services (3 cr.) C: S553, S551,
S552 or consent of instructor
Principles of organization and function of library
technical services, including acquisition, cataloging,
serials, circulation. Special emphasis on research and
development in library systems and technology. Includes
file organization, documentation system development,
analysis, and evaluation for manual, mechanical, and
automated applications.

SLIS-S 640 Seminar in Intellectual Freedom (3 cr.) P: 9
hours of SLIS graduate credit or permission of instructor.
Beginning with a history of and alternative philosophical
justifications for censorship, the student is introduced
to constraints, obligations, and problems relating to
intellectual freedom.

SLIS-S 644 Consumer Health Informatics (3 cr.)
P: S401, S501 or consent of instructor. This is a consumer
health informatics course in which students will learn
about how technologies are used to deliver healthcare to
the public.

SLIS-S 650 Library Philanthropy (3 cr.) Introduces the
role of private giving in support of libraries. Examines
personal and corporate philanthropy and their applicability
in libraries and information centers.

SLIS-S 652 Digital Libraries (3 cr.) This course
introduces digital libraries — networked information
servers that provide access to multimedia data for local
and remote users. Primary emphasis is on developing
digital libraries, based on understanding tools for
presentation and manipulation of multimedia as well as
analysis of user needs.
SLIS-S 653 Health Science Librarianship (3 cr.)
P: S401, S501 or consent of instructor; 
Explores the roles of health sciences libraries, librarianship and informationists in academia and hospital libraries, health information technology and information services environments, and in research and administrative teams. This course provides an introduction to the healthcare industry, health sciences schools and education (medicine, nursing, dentistry, public health, pharmacy, allied health and others), and the culture of healthcare in the United States. Student gain extensive experience with popular reference resources, and searching MEDLINE, PubMed, and specialty bibliographic databases in the health sciences. Students will increase their understanding of librarian and informationist roles in information literacy education, evidence based practice, health literacy, and other issues

SLIS-S 654 Law Librarianship (3 cr.) P: S501 or consent of instructor. An introduction to basic legal materials and law librarianship. Primary and secondary resources; indexes; digests and citators; specialized research methods; current developments in automated legal research. History of law libraries in the U.S., their organization and administration. The role of law librarians in law schools and law firms.

SLIS-S 671 School Media (3 cr.) P: S501, S571, and S574 or concurrent or consent of instructor. Establishes the professional teaching and administrative role of the certified school library media specialist in K-12 settings. Situations are examined that pertain specifically to policy development, budgeting, collection development, instructional design, support staff training, facility design, district supervision, and information networking within the modern school corporation. Students make site visits to leading school information centers, conferences, and media fairs.

SLIS-S 672 Seminar on Literature for Youth (3 cr.) 
P: S571 or consent of instructor. An advanced seminar, addresses such topics as: images of minority groups, societal problems (e.g., poverty and family patterns), or informational needs and materials including access and availability of print, nonprint, and computer resources. May be repeated for credit when topic varies.

SLIS-S 681 The Book 1450 to the Present (3 cr.)
A survey of the book from 1450 to the present, with emphasis on the development of the book in the West. Focuses on the physical aspects of the book from the mid-fifteenth through the twentieth centuries, and on some of the many roles of the book in society during this period; also increases awareness of current scholarly trends in the history of the book.

Undergraduate Courses

SLIS-S 401 Computer-based Information Tools (3 cr.)
Graded S/F. This skills-based course introduces basic applications that will be used throughout the student's course work and beyond. Students' experiences in this course should be seen as a basis for further skill development and learning throughout their careers. The course covers computing platforms, access tools, and management tools. Demonstration of skills will be by a mastery test or an assignment in each unit of the course. S401 does not count toward graduate degree requirements.

Undergraduate Courses

Department of Library and Information Science Faculty

Administrative Officers

- Rachel Applegate, Ph.D. (University of Wisconsin at Madison, Library and Information Studies, 1995), Department Chair and Program Director, rapplega@iupui.edu
- Barbara Albee, M.L.S. (University of Pittsburgh, 1992), Lecturer, balbee@iupui.edu
- Hsin-Liang Chen, Ph.D. (University of Pittsburgh, Library and Information Science, 1999), Associate Professor, chenhsin@iupui.edu
- Andrea Copeland, Ph.D. (Drexel University, 2009), Assistant Professor, ajapzon@iupui.edu
- Marilyn M. Irwin, Ph.D. (Indiana University, Library and Information Science, 1991), Associate Professor Emerita, irwinm@indiana.edu
- Annette Lamb, Ph.D. (Iowa State University, Instructional Technology and Computer Education, 1987), Senior Lecturer, anlamb@iupui.edu
- Jean L. Preer, Ph.D. (George Washington University, American Civilization, 1980; J.D., George Washington University, 1975), Professor Emerita, jepreer@iupui.edu
- Jingfeng Xia, Ph.D. (University of Arizona, Anthropology, 2001), Assistant Professor, xiaji@iupui.edu

Last updated: 02/07/2014

Departments

Welcome to the Department of Library and Information Science!

Indianapolis—A Superb Location for Advanced Library Science Education

The Department of Library and Information Science is a growing online graduate program with emphasis on management of library organizations and technologies.

IUPUI is a modern urban campus in a model urban setting. Cooperation among business, government, private philanthropy, and educational leaders and innovators has created a city ideal for education. LIS is tied to this spirit of growth, service, and quality education for not only Indianapolis, but for the state and beyond.

Indiana's future librarians and information specialists, as well as business leaders, physicians, lawyers, nurses, chemists, engineers, teachers, accountants, journalists, and computer programmers will find quality academic options on this campus that combines the strengths of IU and Purdue. In addition to Indiana citizens, we welcome a growing number of students from all other states and nations.

The Department of Library and Information Science has strong ties with the Indianapolis Public Library and the Indiana State Library. These efforts support public awareness of the need for quality library and information
services to all populations-young and elderly, rural and urban. Our faculty members are also associated with state and national library education organizations and associations in the promotion of educational standards and guidelines.

Students have access to the IUPUI University Library with over 300 computer-equipped work stations and all Indiana University regional campus sites. The MLS degree program in Indianapolis is offered online, with a few face-to-face courses in fall and spring semesters. All requirements can be satisfied with online courses. The MLS degree program in Bloomington is offered in-person, with a few online courses; it can only be completed with in-person class attendance. Faculty use teaching support and delivery systems that allow for online discussion groups and assignments. The faculty include full-time professors who have both established publication records as well as library experience and records of professional service to the field. They are experienced educators and information managers. Students are encouraged to read the research and teaching profiles of the current fulltime faculty as given on the department’s website.

Students are encouraged to explore a wide spectrum of library professions through their course work and field experiences. The department’s curriculum is based on a combination of theory and practice. Internships in application of theory are encouraged. The Indianapolis area as well as cities such as Bloomington, South Bend, Merrillville, Fort Wayne, Evansville, Gary, and Valparaiso offer quality locations for real-world practice experiences. The MLS program overall has been ranked in the top ten nationally, and been recognized for information systems, school library media, and youth services specializations.

Over 70% of the public librarians in Indiana hold a degree from Indiana University. Hundreds in public libraries and school libraries in Indiana have completed the full requirements. Over 200 school corporations in Indiana employ a school media specialist who has completed his or her certification through the IU program. Dozens of academic and special librarians hold the ALA-accredited Indiana University M.L.S. awarded at IUPUI.

All courses for the Masters in Library Science, Specialization in Library Technology Management, dual-degree programs, and certification in public or school librarianship are available online at the IUPUI campus. Students may take up to 9 credits from the Bloomington campus, and transfer in a maximum of 6 credits from another ALA-accredited program. Students can also take up to 6 credits from other departments in the School of Informatics and Computing. Other flexible learning options include independent readings, research, projects and internships. Students should consult with their advisor to determine how to construct a program to meet their career goals. The department’s website, http://soic.iupui.edu/departments/lis/, will provide revisions and updates to this bulletin. Students are encouraged to visit the site frequently for information on career opportunities, schedules, and frequently asked questions. Notices on job leads, professional meetings, conferences, and operations of the school can be received through the le-mail list at: soic-lis-indy-l@iupui.edu.

The Department of Library and Information Science-The World of Information

For decades, scholars and futurists have predicted an information revolution. Those predictions have come to life dramatically in recent years. We live in an information age, an age in which the ability to generate and access new knowledge has become a key driver of social and economic growth.

The signs of a new age are everywhere: the World Wide Web and electronic commerce, personal computers in the classroom, interactive media in the home, virtual universities, electronic publishing, and digital libraries. The statistics are irresistible: the amount of information produced in the last decade alone is greater than all the information created in past millennia. The rhetoric of the Information Age has finally become reality, and that reality translates into unprecedented career opportunities for information professionals who know how to organize, manage, and exploit knowledge assets and who combine analytic and technical skills with a sense of the strategic value of information to individuals and organizations of all kinds.

Today’s information professionals connect people and information, at all levels and for all purposes. The field offers a kaleidoscope of career tracks from which to choose both within and outside traditional library organizations: user education, informational web design, information systems analysis, database design and marketing, information brokering, medical informatics, systems librarianship, competitor intelligence analysis, usability testing. In a sense, the opportunities are limited only by the imagination.

Librarians are active agents of social change and early adopters of new information and communication technologies. Professional librarians deploy teamwork, leadership, and technology knowledge to design and deliver information solutions. The field is so diverse that there is a place for every student’s passion. Indiana University’s School of Informatics and Computing’s Department of Library and Information Science responds to every technology and information opportunity with a flexible and forward-looking curriculum, which stresses those social, behavioral, and cultural aspects of information design and use.

Departments

Departments

The School of Informatics and Computing is comprised of three academic departments: BioHealth Informatics, Human-Centered Computing and Library and Information Science. Each department consists of unique and innovative programs taught by world class faculty, who are committed to ongoing research in their area of expertise, and dedicated to preparing you for a successful future. This gives you a distinct edge—you gain the latest knowledge directly from accessible experts and through proven and continuously updated real-world curriculum.

BioHealth Informatics
The BioHealth Department is made up of Biological and Health Informatics as well as Health Information Administration (HIA).

Human-Centered Computing
The Department of Human-Centered Computing includes Human-Computer Interaction (HCI), Media Arts and Science (MAS) and the Informatics undergraduate program.

Library and Information Science
Library and Information Science is managing information access and use to positively affect the lives of people in their communities.

Academic Policies & Procedures

Absences

From Final Examinations
Students are required to adhere to the policies regarding final examinations as published in the Schedule of Classes.

From Scheduled Classes
Illness or equivalent distress is the only acceptable excuse for absence from class. Other absences must be explained to the satisfaction of the instructor, who will decide whether omitted work may be made up.

Credit for Correspondence Courses
With prior approval, the School of Informatics will accept a maximum of two courses (6 credit hours total) by correspondence study to count toward the degree requirements. Only general elective courses may be taken by correspondence. Distance learning courses and courses conducted online are not considered correspondence courses and, therefore, do not have a credit hour limit associated with them.

Degree Application
Candidates for graduation must file an application with the school by March 1 for December graduation and October 1 for May, June, or August graduation. Credits for all course work, except that of the current semester, must be recorded on the candidate’s Indiana University transcript at least one month prior to the date of graduation.

Statute of Limitations
Candidates for the bachelor’s degree in informatics have the right to complete the degree requirements specified by the bulletin in effect at the time they entered Indiana University, provided that the required courses are available and that no more than eight calendar years have elapsed since the date of entry.

Grading Policies
The School of Informatics follows the official grading system of Indiana University described in the front of this bulletin.

Pass/Fail
During an undergraduate program, students in the School of Informatics in good standing (not on probation) may enroll in up to a maximum of eight university elective courses to be taken with a grade of P (pass) or F (fail). Students may take up to two Pass/Fail courses during an academic year. The procedure for declaring this option may be found in the Schedule of Classes. A grade of P is not counted in the grade point average; a grade of F is included. Grades of P cannot be changed to any other letter grade.

Probation/Dismissal/Readmission for Undergraduate Students of the IU School of Informatics and Computing

Academic Warning
A student whose semester (fall or spring) grade point average (GPA) falls below 2.0, but whose cumulative GPA is a 2.0 or higher will be placed on academic warning. An advising hold will be placed on the student’s record and the student will be required to meet with their academic advisor prior to registration.

Academic Probation
A student whose cumulative grade point average (CGPA) falls below a 2.0 or has two consecutive semesters (fall and spring) with a GPA below 2.0 will be placed on probation for the subsequent semester. A probation hold will be placed on the student’s record and the student will be required to meet with their academic advisor prior to registration. Probation will be removed if the cumulative GPA reaches 2.0 or higher or if the semester GPA reaches 2.0 or higher, if the cumulative GPA is already at 2.0 or higher.

Dismissal
A student on probation who has completed a minimum of 12 IU GPA hours is subject to dismissal upon failing to attain a GPA of at least 2.0 in any two consecutive semesters (fall and spring) and the student’s cumulative IU GPA is below 2.0.

First−Semester Student Dismissal
A first−semester student who has attempted a minimum of 12 IU GPA hours is subject to dismissal upon failing to attain a GPA of at least 1.0 in the student’s first semester in the School of Informatics and Computing.

Readmission
Students who are dismissed for the first time must sit out for a minimum of one regular (fall or spring) semester and petition by the established deadlines to be eligible for readmission. Students dismissed two or more times must remain out of school for two regular (fall and spring) semesters and petition by the established deadlines to be eligible for readmission. Readmitted students may only begin in either the fall or spring semester.

Grade Replacement
The Grade Replacement Policy is available only to undergraduate students. It may be exercised for a maximum of 15 credit hours, no more than two times for a given course, with each attempted replacement counting toward the 15 credit hour limit. Any grade may be replaced with the last grade earned for the course, as long as the most recent grade is equal to or higher than the grade being replaced. The replaced grade will then be excluded from the cumulative grade point average. However, the course listing and the replaced grade will remain on the student’s academic record with an “X” notation indicating that the grade is excluded from the cumulative grade point average.
The official grading system is as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.0</td>
</tr>
<tr>
<td>A–</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
</tr>
<tr>
<td>B–</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
</tr>
<tr>
<td>C–</td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td>1.0</td>
</tr>
<tr>
<td>D–</td>
<td>0.7</td>
</tr>
<tr>
<td>F</td>
<td>0.0 - Failed</td>
</tr>
<tr>
<td>I</td>
<td>Incomplete</td>
</tr>
<tr>
<td>R</td>
<td>Deferred</td>
</tr>
<tr>
<td>NR</td>
<td>No Grade Reported</td>
</tr>
</tbody>
</table>

A minimum of a B (3.0) average in graduate work is required for continuance in graduate study. Courses completed with grades below C (2.0) are not counted toward degree requirements, but such grades will be counted in calculating a student’s grade point average. Note that no work may be transferred from another institution unless the grade is B (3.0) or higher.

**Incomplete**

A grade of Incomplete may be given only if the completed portion of a student’s work is of passing quality. It is the responsibility of the student to satisfy the requirements of that course within one calendar year from the date on which the Incomplete is recorded. The student is expected to finish all necessary work in time for the instructor to assign a regular grade before the expiration of this time period. If the student is unable to do so, it is the student’s responsibility to notify the instructor of the course and the graduate advisor within the year to request an extension of time. Every overdue Incomplete will be changed to a grade of F after one calendar year.

**Withdrawals**

Because deadlines for withdrawal from courses may vary by campus and/or school, students should check with the current campus Schedule of Classes to verify deadlines and procedures.

**Course Waivers**

Requests for waivers of specific courses or requirements on the basis of previous course work are to be submitted in writing to the dean.

**Credit Earned in Nondegree Status**

Not more than 9 hours of graduate credit completed as a nondegree student may be credited toward a School of Informatics graduate degree. Deficiency courses do not apply to the 9 credit hours.

**Academic Standing**

Students are considered to be in good standing during any semester in which their academic grade point average is at least 3.0 (B) for both their last semester’s course work and for the cumulative average of all course work completed. Only courses with grades of C (2.0) or above may be counted toward degree requirements. However, grades below C are used in computing the cumulative grade point average, even if a course is repeated and a higher grade is earned.

**Graduate Academic Regulations**

**Graduate Academic Regulations**

In addition to the many topics covered below, students enrolled in the School of Informatics and Computing’s graduate programs are encouraged to review the MS and PhD student handbooks.

**Applicability of Degree Requirements**

Students may choose to complete either the specific degree requirements published in the appropriate bulletin at the time of entry into the university or those in the bulletin current at the time of graduation.

**Residency Requirements**

The campus at which a student is admitted will certify and award the degree.

**Intercampus Transfer**

Students enrolled in the School of Informatics at any campus of Indiana University may transfer to the School of Informatics on another campus, provided they are in good standing. However, international students may need to pay a processing fee.

**Transfer of Credit**

A maximum of 8 credit hours of graduate course work with grades of B (3.0) or higher may be transferred from other accredited colleges and universities and applied to the School of Informatics degree programs. The transfer must be approved by the dean, and is not an automatic occurrence.

**Revalidation**

Normally, a course may not be counted toward degree requirements if it has been completed more than five years prior to the awarding of the degree for master’s students. The advisor may recommend to the dean that course work taken prior to the deadline be revalidated if it can be demonstrated that the knowledge contained in the course(s) remains current. Currency of knowledge may be demonstrated by: (a) passing an examination specifically on the material covered by the course; (b) passing a more advanced course in the same subject area; (c) passing a comprehensive examination in which the student demonstrates substantial knowledge of the content of the course; or (d) publishing scholarly research demonstrating knowledge of the content of the course. Courses taken while an undergraduate and counted toward the requirements of a baccalaureate degree may not also be counted toward a graduate degree.

**Grading System**

The official grading system is as follows:
Awardees are selected for their computing and IT aptitude, for their computing-related achievements and interests. The Aspirations in Computing Freshman Scholarship is available to incoming female freshman in the School of Informatics and Computing at IUPUI. This scholarship is awarded to students who won the NCWIT Aspirations in Computing competition and are admitted directly to the School of Informatics and Computing. This scholarship is renewable for up to four years of study with a GPA of 3.2 and continuous full-time enrollment.

Information on scholarship opportunities for graduate students in the Department of Library and Information Science can be found here.

Current Student Scholarships

The Health Information Technology Scholarship

One award is granted annually to a junior or senior majoring in Informatics, Health Information Administration, or Media Arts and Science with an interest in health information technology. The scholarship may be given to a student with a strong affinity for working in a health field, whether through the study of informatics and the health sciences, health information administration, bioinformatics or media arts and science. Preference will be given to a student with a 3.2 GPA who demonstrates strong leadership qualities and a desire to pursue further education beyond their undergraduate degree.

Gertrude L. Gunn Memorial Fund Scholarship

Multiple awards are granted to students with junior or senior standing who have been admitted into the Health Information Administration professional program. The student must demonstrate academic excellence, a minimum GPA of 3.0, and financial need. Students should apply in the spring semester prior to their junior or senior year.

The John R. Gibbs Scholarship/Fellowship for Innovation

One award is granted annually either to a full-time undergraduate student or a full-time graduate student currently in the School of Informatics and Computing. The student must have a record of academic excellence and a minimum GPA of 3.5 on a scale of 4.0. Preference is given to those who have demonstrated or expressed a stated interest in innovation and entrepreneurship.

The Dean’s Advisory Council Senior Scholarship

One award is granted annually to a student of senior standing currently majoring in Informatics or Media Arts and Science. The student must maintain his or her major in Informatics or Media Arts and Science throughout his or her senior year. Candidates must have a minimum GPA of 3.5 on a scale of 4.0.

The Tyler R. Stull Memorial Scholarship

One award is granted annually to an undergraduate student of senior standing majoring in Media Arts and Science. The student must have a record of innovation, community service or academic excellence. The student must also maintain his or her major in Informatics or Media Arts and Science through the study of informatics and the health sciences, health information administration, bioinformatics or media arts and science. Preference will be given to students who are Indiana residents and demonstrate financial need.

Scholarships & Awards

Scholarships and Awards

The School of Informatics and Computing offers several scholarships in all degree programs. Most scholarships are available only to undergraduate students and information on applying can be found on our website. Financial assistance for master’s students is generally given to a select number of students in the form of a graduate assistantship.

Freshman Scholarships

School of Informatics and Computing Freshman Scholarships are awarded to incoming freshmen students who graduated in the top 25% of their class and have received a minimum SAT score of 1070 or ACT of 23. Students must plan to enroll in the Informatics or the Media Arts and Science program. This is renewable for up to four years.

The Aspirations in Computing Freshman Scholarship is awarded to students who won the NCWIT Aspirations in Computing competition and are admitted directly to the School of Informatics and Computing at IUPUI. This scholarship is available to incoming female freshman for their computing-related achievements and interests. Awardees are selected for their computing and IT aptitude, leadership ability, academic history, and plans for post-secondary education. The scholarship is automatically renewed for up to four years of study with a GPA of 3.2 and continuous full-time enrollment.

Scholarships in all degree programs. Most scholarships are available only to undergraduate students and information on applying can be found on our website. Financial assistance for master’s students is generally given to a select number of students in the form of a graduate assistantship.

Degree Conferral

For all students seeking a master’s degree, an application for the degree must be filed with the School of Informatics at least 60 days before the date anticipated for degree conferral. All degree requirements must be completed at least 30 days prior to the date of expected degree conferral, including submission of the bound copies of the master’s thesis (if required for degree).

Time Requirements

All requirements for M.S. degrees must be met within five consecutive calendar years from the date of completion of the first credited (i.e., nondeficiency) course.

Current Student Scholarships

The Health Information Technology Scholarship

One award is granted annually to a junior or senior majoring in Informatics, Health Information Administration, or Media Arts and Science with an interest in health information technology. The scholarship may be given to a student with a strong affinity for working in a health field, whether through the study of informatics and the health sciences, health information administration, bioinformatics or media arts and science. Preference will be given to a student with a 3.2 GPA who demonstrates strong leadership qualities and a desire to pursue further education beyond their undergraduate degree.

Gertrude L. Gunn Memorial Fund Scholarship

Multiple awards are granted to students with junior or senior standing who have been admitted into the Health Information Administration professional program. The student must demonstrate academic excellence, a minimum GPA of 3.0, and financial need. Students should apply in the spring semester prior to their junior or senior year.

The John R. Gibbs Scholarship/Fellowship for Innovation

One award is granted annually either to a full-time undergraduate student or a full-time graduate student currently in the School of Informatics and Computing. The student must have a record of academic excellence and a minimum GPA of 3.5 on a scale of 4.0. Preference is given to those who have demonstrated or expressed a stated interest in innovation and entrepreneurship.

The Dean’s Advisory Council Senior Scholarship

One award is granted annually to a student of senior standing currently majoring in Informatics or Media Arts and Science. The student must maintain his or her major in Informatics or Media Arts and Science throughout his or her senior year. Candidates must have a minimum GPA of 3.5 on a scale of 4.0.

The Tyler R. Stull Memorial Scholarship

One award is granted annually to an undergraduate student of senior standing majoring in Media Arts and Science. The student must have a record of innovation, community service or academic excellence. The student must also maintain his or her major in Informatics or Media Arts and Science through the study of informatics and the health sciences, health information administration, bioinformatics or media arts and science. Preference will be given to students who are Indiana residents and demonstrate financial need.

Administration, Faculty and Staff

IU School of Informatics and Computing at IUPUI: Administration, Faculty, and Staff

Administration
Palakal, Mathew J., Ph.D. Computer Science, 1987; Executive Associate Dean, Professor
MacDorman, Karl, Ph.D. University of Cambridge, UK, 1996; Associate Dean for Academic Affairs, Associate Professor
Mannheimer, Steve, M.F.A., Washington University, 1974; Associate Dean for Faculty Affairs, Professor

Faculty

Applegate, Rachel, Ph.D., University of Wisconsin at Madison, 1995; Chair and Program Director, Department of Library and Information Science, Associate Professor
Albee, Barbara, M.L.S., University of Pittsburgh, 1992; Lecturer
Baker, M. Pauline, Ph.D., University of Illinois, 1990; Associate Professor
Bolchini, Davide, Ph.D., University of Lugano, 2003; Chair, Department of Human-Centered Computing, Assistant Professor
Chen, Hsin-Liang, Ph.D., University of Pittsburgh, 1999; Associate Professor
Chen, Yue (Jake), Ph.D., University of Minnesota, 2001; Associate Professor
Comer, Robert Skipworth, M.S., Indiana University, 2001; Research Associate
Copeland, Andrea, Ph.D., Drexel University, 2009; Assistant Professor
Defazio, Joseph, Ph.D., Indiana University, 2008; Program Director, Media Arts & Science, Associate Professor
Dixon, Brian, Ph.D., Indiana University, 2011; Assistant Professor
Doebbeling, Brad, M.D., University of Colorado, 1985; Chair, Department of BioHealth Informatics, Professor
Elmore, Garland, Ph.D., Ohio University, 1979; Associate Professor Emeritus
Faiola, Anthony, Ph.D., Purdue University, 2005; Program Director, Human-Computer Interaction, Associate Professor
Hayes, Alisa, M.S.A., Central Michigan University, 2008; Lecturer
Hook, Sara A., J.D., 1994; Program Director, Undergraduate Informatics Program, Professor of Informatics
Huang, Edgar, Ph.D., Indiana University, 1999; Associate Professor
Irwin, Marilyn, Ph.D., Indiana University, 1991; Associate Professor Emeritus
Janga, Sarath Chandra, Ph.D., University of Cambridge, 2010; Assistant Professor
Jones, Josette W., Ph.D., University of Wisconsin, 2002; Program Director, Health Informatics Program, Associate Professor, Nursing
Lamb, Annette, Ph.D., Iowa State University, 1987; Senior Lecturer
Lewis, C. Thomas, M.F.A., California Institute for the Arts, Valencia; Lecturer
Liu, Xiaowen, Ph.D., City University of Hong Kong, 2008; Assistant Professor
Lykins, Elizabeth, M.S., Indiana University, 2004; Lecturer
Lyst, James, M.S., Indiana University; Lecturer
Murry, Carolyn, M.B.A., Indiana Wesleyan University, 2010; Lecturer
Niu, Xi, Ph.D., University of North Carolina, 2012; Assistant Professor
Perry, Lauri, M.J., Loyola University, 2011; Director, Health Information Administration Program, Lecturer
Pfaff, Mark, Ph.D., The Pennsylvania State University, 2008; Assistant Professor
Powers, Mathew, M.F.A., Indiana University, 2006; Lecturer
Schilling, Katherine, Ed.D., Boston University, 2002; Associate Professor
Shelton, Todd, M.S., Indiana University, 2010; Lecturer
Stewart, Jennifer, M.S., Indiana University, 2009; Lecturer
Tennant, Felisa, M.I.S., Indiana University, 2001; Lecturer
Tennant, Susan, M.S., Indiana University, 2000; Clinical Associate Professor, Assistant Director, Media Arts and Science
Voida, Amy, Ph.D., Georgia Institute of Technology; Assistant Professor
Voida, Stephen, Ph.D., Georgia Institute of Technology, 2008; Assistant Professor
William, Albert, M.S., Indiana University, 2002; Research Associate
Wood, Zebulun, M.S., Purdue University, 2009; Lecturer
Wu, Huanmei, Ph.D. Northeastern University, 2005; Director, Bioinformatics Program, Assistant Professor
Xia, Jingfeng, Ph.D., University of Arizona, 2001; Assistant Professor
Zhou, Yaoqi, Ph.D., State University of New York, 1990; Professor
Zhu, Liugen, Ph.D., University of Illinois, 2003; Lecturer

Staff

Barker, Nancy, Assistant Business Manager
Benedict, Brian, Director of Career Services
Bunge, Elizabeth, Student Services Assistant
Chambers, Stephanie, Career Services Specialist
Coryell, Geoff, Multimedia Technology Specialist
Daugherty, Victoria, Recruiting Specialist
Edwards, Natalie, Academic Advisor
**Courses**

**Informatics**

INFO-B 501 Introduction to Informatics (3 cr.) Basic information representation and processing; searching and organization; evaluation and analysis of information. Internet-based information access tools; ethics and economics of information sharing.

INFO-B 505 Informatics Project Management (3 cr.) This course introduces standard project management concepts and capabilities, in the context of innovative and creative knowledge-work projects involving computers. These are targeted as a common ground for all members of a successful team, not only for the Project Manager. Through lecture, reading, discussion, computer lab exercises, and projects, students will become more proficient with basic project management terminology, techniques and technologies. Students will apply industry-standard project management in a framework of productive team dynamics, consumer frame of reference, and organizational change and optionally continuing to professional certification.

INFO-B 510 Data Acquisition and Laboratory Automation (3 cr.) This course covers the entire process by which signals from laboratory instruments are turned into useful data: (1) fundamentals of signal conditioning and sampling; (2) interfacing, communications, and data transfer; (3) markup languages and capability systems datasets; (4) general lab automation; (5) robotics. A significant portion of this course is devoted to practical learning using LabVIEW.

INFO-B 512 Scientific and Clinical Data Management (3 cr.) Management and mining of data generated in scientific laboratories and clinical trials for data mining and knowledge discovery requires robust solutions that include knowledge discovery techniques and databases, extraction of data/metadata stored in data warehouses that use Storage Use Networks and dealing with security issues of handling this data.

INFO-B 519 Introduction to Bioinformatics (3 cr.) In this course, students learn fundamental concepts and methods in bioinformatics, a field at the intersection of biology and computing. It surveys a wide range of topics including computational sequence analysis, sequence homology searching and motif finding, gene finding and genome annotation, protein structure analysis and modeling, genomics and SNP analysis, DNA microarrays and gene expression analysis, Proteomics, network/systems biology, and biological knowledge discovery. It serves a gateway course for all entry-level bioinformatics graduate students. Prerequisite: students should be enrolled in the graduate program of bioinformatics, or have advanced training in at least one of the following areas: computer science, applied mathematics, quantitative biomedical sciences, bioengineering, biotechnology, and biostatistics.

INFO-B 529 Machine Learning for Bioinformatics (3 cr.) P: B519 The course covers advanced topics in bioinformatics with a focus on machine learning. The course will review existing techniques such as hidden Markov models, artificial neural network, decision trees, stochastic grammars, and kernel methods. Examine application of these techniques to current bioinformatics problems including: genome annotation and comparison, gene finding, RNA secondary structure prediction, protein structure prediction, gene expression analysis, proteomics, and integrative functional genomics.

INFO-B 532 Seminar in Bioinformatics (1-3 cr.) Presentation and discussion of new topics in bioinformatics. Concentration on a particular area each semester to be announced before registration. Total credit for seminars and independent study courses may not exceed 9 credit hours.

INFO-B 552 Independent Study in Bioinformatics (1-3 cr.) Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit. Total credit for seminars and independent study courses may not exceed 9 hours.

INFO-B 556 Biological Database Management (3 cr.) This course studies database management and its application to bioinformatics. Topics include data modeling, data indexing and query optimization with a bioinformatics perspective, and database issues arising from the complex nature of bioinformatics data. The course also involves the study of current challenges related to bioinformatics data management, data integration, and the Semantic Web.

INFO-B 572 Computational Chemistry and Molecular Modeling (3 cr.) P: I571 Computer models of molecules and their behavior in gas and condensed phases; implicit and explicit solvation models; quantum and molecular mechanics; search strategies for conformational analysis; geometry optimization methods; information content from Monte Carlo and molecular dynamics simulations; QSAR; CoMFA; docking.

INFO-B 573 Programming for Science Informatics (3 cr.) Students will receive a thorough understanding of software development for chem- and bioinformatics, and broaden experience of working in a scientific computing group. Topics include programming for the web, depiction of chemical and biological structures in 2D and 3D, science informatics tool kits, software APIs, AI and machine-learning algorithm development,
high-performance computing, database management, managing a small software development group, and design and usability of science informatics software.

INFO-B 576 Structural Approaches to Systems Biology (3 cr.) Computational approaches to characterizing and predicting tertiary protein configuration, based on known data of atomic, intramolecular and intermolecular interactions. The course presents a balanced and integrative outlook at the various molecular components that determine biological function, sub-cellular organization, dysfunction and even disease examined at the nanoscale.

INFO-B 590 Topics in Informatics (3 cr.) Variable topic. Emphasis is on new developments and research in informatics. Can be repeated with different topics, subject to approval of the Dean.

INFO-B 600 Professionalism and Pedagogy in Informatics (3 cr.) This course introduces students to topics and skills necessary for entering careers in industry or the academy. Topics covered include career planning, curriculum development, effective teaching, research ethics, scholarly and trade publishing, grantsmanship, and intellectual property consideration.

INFO-B 601 Introduction to Complex Systems (3 cr.) This course is an introduction to dynamic complex systems and complexity management, using the basic mathematical notions of dynamical system theory, without being highly technical mathematically. The course provides an evaluation of models, theories, methods and research from an operational and disciplined approach. Students will be introduced with a new way of making sense of each of these and other issues by exploring how other complex adaptive systems behave. The course will revolve around some cardinal topics including but not limited to reductionism versus system biology, chaos theory, fractal networks, self similarity, agent-based models, discrete and continuous simulation, evolution, artificial life, social network theory, etc. each one introduced by specific examples and abstracted thereby.

INFO-B 605 Social Foundations of Informatics (3 cr.) Topics include the economics of information businesses and information societies, legal and regulatory factors that shape information and information technology use, the relationship between organization cultures and their use of information and information technology, and ownership of intellectual property.

INFO-B 619 Structural Bioinformatics (3 cr.) This course covers the function of biological macromolecules (DNA, RNA, protein) and informatics approaches based on their sequence and 3D structure. Topics include molecular visualization, structure determination and alignment, and the prediction of protein structure, interactions, and function.

INFO-B 621 Computational Techniques in Comparative Genomics (3 cr.) Course will summarize computational techniques for comparing genomes on the DNA and protein sequence levels. Topics include state-of-the-art computational techniques and their applications: understanding of hereditary diseases and cancer, genetic mobile elements, genome rearrangements, genome evolution, and the identification of potential drug targets in microbial genomes.

INFO-B 627 Advanced Seminar I–Bioinformatics (3 cr.) Introduce students to major historical, contemporary, and emerging theories, methods, techniques, technologies and applications in the field of Bioinformatics. Students will explore relevant and influential research, results and applications. Students will develop an understanding of leading research approaches and paradigms, and will design an independent research program in relation to their individual research fields and personal interests. The course will focus on research approaches in bioinformatics, emerging technologies in biology and chemistry, and basic computational techniques.

INFO-B 637 Advanced Seminar II – Bioinformatics (3 cr.) P: Advanced graduate standing or consent of instructor. Introduces students to major historical contemporary and emerging theories, methods, and techniques in the field of Bioinformatics. Students will examine and explore relevant and influential research, results and applications. Students will develop an understanding of leading research approaches and paradigms, and will design and independent research program in relation to their individual research fields and personal interests. The course will focus on research approaches in bioinformatics, emerging technologies in biology and chemistry, and basic computational techniques.

INFO-B 646 Computational Systems Biology (3 cr.) Introduction of how Omics data are generated, managed, analyzed from large-scale computational perspectives, exploring computational resources, especially biological pathways for integrative mining and computational analysis representing and modeling multiscale biological networks, relating static/dynamic properties to the understanding phenotypic functions at the molecular systems level.

INFO-B 656 Translational Bioinformatics Applications (3 cr.) This course entails a cohesive approach to the theory and practice of bioinformatics applications in translational medicine (TM). It includes topics related to the complexities of low, medium and high-throughput applications in TM and powerful solutions to TM data management problems by employing various informatics frameworks.

INFO-B 690 Topics in Informatics (3 cr.) Variable topic. Course is intended for Ph.D. students in the School of Informatics. Can be repeated with different topics, subject to approval of the dean.

INFO-B 691 Thesis/Project in Health Informatics (1-6 cr.) The student prepares and presents a thesis or project in the area of health informatics. The product is substantial, typically multi-chapter paper or carefully designed and evaluated application, based on well-planned research or scholarly project. Details are worked out between the student and sponsoring faculty member.

INFO-B 692 Thesis/Project in Bioinformatics (1-6 cr.) The student prepares and presents thesis or project in an area of bioinformatics. The product is substantial, typically a multi-chapter paper or carefully designed and evaluated application, based on well-planned research or
quantitative to qualitative research; from deterministic, methodologies used in informatics research, from full spectrum of research concepts, designs, and core advanced topics that include, but are not limited to, Markov chains and random walks, random graphs, and discrete probability, optimization, statistical inference mathematics, models or computation, counting techniques manipulation. The topics include proof methods in methods for information modeling, analysis, and governance issues and working with professionals such as contracts, real and personal property, shareholder and planning for growth, resources for entrepreneurs, relations, bankruptcy and other pitfalls, insurance, and bylaws, tax implications, marketing and public relations, drafting business plans, preparing appropriate paperwork such as articles of incorporation, financing and credit, selecting a business structure, new company, such as sole proprietorship, partnership, corporation, etc., matters that need to be considered when starting a solid foundation on a variety of legal and business issues. This course is intended for students who are interested in starting their own company or who anticipate joining a start-up company. It will provide students with a solid foundation on a variety of legal and business matters that need to be considered when starting a new company, such as selecting a business structure (sole proprietorship, partnership, corporation, etc.), financing and credit, drafting business plans, preparing appropriate paperwork such as articles of incorporation and bylaws, tax implications, marketing and public relations, bankruptcy and other pitfalls, insurance, and planning for growth, resources for entrepreneurs, contracts, real and personal property, shareholder and governance issues and working with professionals such as attorneys, accountants and insurance agents. This is an introduction to mathematical methods for information modeling, analysis, and manipulation. The topics include proof methods in mathematics, models or computation, counting techniques and discrete probability, optimization, statistical inference and core advanced topics that include, but are not limited to, Markov chains and random walks, random graphs, and Fourier analysis. Full spectrum of research concepts, designs, and methodologies used in informatics research, from quantitative to qualitative research; from deterministic, hypothesis-driven experimental designs to a posteriori discovery through data mining. Philosophical foundations to practical applications. Provides the conceptual framework in which the informatics graduate student may develop their own research agenda. **Graduate Course Descriptions**

**Informatics**

**INFO-B 501 Introduction to Informatics (3 cr.)** Basic information representation and processing; searching and organization; evaluation and analysis of information. Internet-based information access tools; ethics and economics of information sharing.

**INFO-B 505 Informatics Project Management (3 cr.)** This course introduces standard project management concepts and capabilities, in the context of innovative and creative knowledge-work projects involving computers. These are targeted as a common ground for all members of a successful team, not only for the Project Manager. Through lecture, reading, discussion, computer lab exercises, and projects, students will become more proficient with basic project management terminology, techniques and technologies. Students will apply industry-standard project management in a framework of productive team dynamics, consumer frame of reference, and organizational change and optionally continuing to professional certification.

**INFO-B 510 Data Acquisition and Laboratory Automation (3 cr.)** This course covers the entire process by which signals from laboratory instruments are turned into useful data: (1) fundamentals of signal conditioning and sampling; (2) interfacing, communications, and data transfer; (3) markup languages and capability systems datasets; (4) general lab automation; (5) robotics. A significant portion of this course is devoted to practical learning using LabVIEW.

**INFO-B 512 Scientific and Clinical Data Management (3 cr.)** Management and mining of data generated in scientific laboratories and clinical trials for data mining and knowledge discovery requires robust solutions that include knowledge discovery techniques and databases, extraction of data/metadata stored in data warehouses that use Storage Use Networks and dealing with security issues of handling this data.

**INFO-B 519 Introduction to Bioinformatics (3 cr.)** In this course, students learn fundamental concepts and methods in bioinformatics, a field at the intersection of biology and computing. It surveys a wide range of topics including computational sequence analysis, sequence homology searching and motif finding, gene finding and genome annotation, protein structure analysis and modeling, genomics and SNP analysis, DNA microarrays and gene expression analysis, Proteomics, network/systems biology, and biological knowledge discovery. It serves a gateway course for all entry-level bioinformatics graduate students. Prerequisite: students should be enrolled in the graduate program of bioinformatics, or have advanced training in at least one of the following areas: computer science, applied mathematics, quantitative biomedical sciences, bioengineering, biotechnology, and biostatistics.

**INFO-B 529 Machine Learning for Bioinformatics (3 cr.)** P: B519 The course covers advanced topics in bioinformatics with a focus on machine learning. The
course will review existing techniques such as hidden Markov models, artificial neural network, decision trees, stochastic grammars, and kernel methods. Examine application of these techniques to current bioinformatics problems including: genome annotation and comparison, gene finding, RNA secondary structure prediction, protein structure prediction, gene expression analysis, proteomics, and integrative functional genomics.

INFO-B 532 Seminar in Bioinformatics (1-3 cr.)
Presentation and discussion of new topics in bioinformatics. Concentration on a particular area each semester to be announced before registration. Total credit for seminars and independent study courses may not exceed 9 credit hours.

INFO-B 552 Independent Study in Bioinformatics (1-3 cr.)
Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit. Total credit for seminars and independent study courses may not exceed 9 hours.

INFO-B 556 Biological Database Management (3 cr.)
This course studies database management and its application to bioinformatics. Topics include data modeling, data indexing and query optimization with a bioinformatics perspective, and database issues arising from the complex nature of bioinformatics data. The course also involves the study of current challenges related to bioinformatics data management, data integration, and the Semantic Web.

INFO-B 572 Computational Chemistry and Molecular Modeling (3 cr.)
Pr: I571 Computer models of molecules and their behavior in gas and condensed phases; implicit and explicit solvation models; quantum and molecular mechanics; search strategies for conformational analysis; geometry optimization methods; information content from Monte Carlo and molecular dynamics simulations; QSAR; CoMFO; docking.

INFO-B 573 Programming for Science Informatics (3 cr.)
Students will receive a thorough understanding of software development for chem- and bioinformatics, and broaden experience of working in a scientific computing group. Topics include programming for the web, depiction of chemical and biological structures in 2D and 3D, science informatics tool kits, software APIs, AI and machine-learning algorithm development, high-performance computing, database management, managing a small software development group, and design and usability of science informatics software.

INFO-B 576 Structural Approaches to Systems Biology (3 cr.)
Computational approaches to characterizing and predicting tertiary protein configuration, based on known data of atomic, intramolecular and intermolecular interactions. The course presents a balanced and integrative outlook at the various molecular components that determine biological function, subcellular organization, dysfunction and even disease examined at the nanoscale.

INFO-B 590 Topics in Informatics (3 cr.)
Variable topic. Emphasis is on new developments and research in informatics. Can be repeated with different topics, subject to approval of the Dean.

INFO-B 600 Professionalism and Pedagogy in Informatics (3 cr.)
This course introduces students to topics and skills necessary for entering careers in industry or the academy. Topics covered include career planning, curriculum development, effective teaching, research ethics, scholarly and trade publishing, grantsmanship, and intellectual property consideration.

INFO-B 601 Introduction to Complex Systems (3 cr.)
This course is an introduction to dynamic complex systems and complexity management, using the basic mathematical notions of dynamical system theory, without being highly technical mathematically. The course provides an evaluation of models, theories, methods and research from an operational and disciplined approach. Students will be introduced with a new way of making sense of each of these and other issues by exploring how other complex adaptive systems behave. The course will revolve around some cardinal topics including but not limited to reductionism versus system biology, chaos theory, fractal networks, self similarity, agent-based models, discrete and continuous simulation, evolution, artificial life, social network theory, etc. Each one introduced by specific examples and abstracted thereby.

INFO-B 605 Social Foundations of Informatics (3 cr.)
Topics include the economics of information businesses and information societies, legal and regulatory factors that shape information and information technology use, the relationship between organization cultures and their use of information and information technology, and ownership of intellectual property.

INFO-B 619 Structural Bioinformatics (3 cr.)
This course covers the function of biological macromolecules (DNA, RNA, protein) and informatics approaches based on their sequence and 3D structure. Topics include molecular visualization, structure determination and alignment, and the prediction of protein structure, interactions, and function.

INFO-B 621 Computational Techniques in Comparative Genomics (3 cr.)
Course will summarize computational techniques for comparing genomes on the DNA and protein sequence levels. Topics include state-of-the-art computational techniques and their applications: understanding of hereditary diseases and cancer, genetic mobile elements, genome rearrangements, genome evolution, and the identification of potential drug targets in microbial genomes.

INFO-B 627 Advanced Seminar I – Bioinformatics (3 cr.)
Introduce students to major historical, contemporary, and emerging theories, methods, technologies and applications in the field of Bioinformatics. Students will explore relevant and influential research, results and applications. Students will develop an understanding of leading research approaches and paradigms, and will design an independent research program in relation to their individual research fields and personal interests.

The course will focus on research approaches in bioinformatics, emerging technologies in biology and chemistry, and basic computational techniques.

INFO-B 637 Advanced Seminar II – Bioinformatics (3 cr.)
Pr: Advanced graduate standing or consent of instructor. Introduces students to major historical, contemporary and emerging theories, methods, and
techniques in the field of Bioinformatics. Students will examine and explore relevant and influential research, results and applications. Students will develop an understanding of leading research approaches and paradigms, and will design and independent research program in relation to their individual research fields and personal interests. The course will focus on research approaches in bioinformatics, emerging technologies in biology and chemistry, and basic computational techniques.

INFO-B 646 Computational Systems Biology (3 cr.)
Introduction of how Omics data are generated, managed, analyzed from large-scale computational perspectives, exploring computational resources, especially biological pathways for integrative mining and computational analysis representing and modeling multiscale biological networks, relating static/dynamic properties to the understanding phenotypic functions at the molecular systems level.

INFO-B 656 Translational Bioinformatics Applications (3 cr.)
This course entails a cohesive approach to the theory and practice of bioinformatics applications in translational medicine (TM). It includes topics related to the complexities of low, medium and high-throughput applications in TM and powerful solutions to TM data management problems by employing various informatics frameworks.

INFO-B 690 Topics in Informatics (3 cr.)
Variable topic. Course is intended for Ph.D. students in the School of Informatics. Can be repeated with different topics, subject to approval of the dean.

INFO-B 691 Thesis/Project in Health Informatics (1-6 cr.)
The student prepares and presents a thesis or project in the area of health informatics. The product is substantial, typically multi-chapter paper or carefully designed and evaluated application, based on well-planned research or scholarly project. Details are worked out between the student and sponsoring faculty member.

INFO-B 692 Thesis/Project in Bioinformatics (1-6 cr.)
The student prepares and presents thesis or project in an area of bioinformatics. The product is substantial, typically a multi-chapter paper or carefully designed and evaluated application, based on well-planned research or scholarly project. Details are worked out between student and sponsoring faculty member.

INFO-B 698 Research in Informatics (1-12 cr.)
Research under the direction of a member of the graduate faculty that is not dissertation related. Can be repeated for credit for a total of 30 credit hours.

INFO-B 699 Independent Study in Informatics (1-3 cr.)
Independent research and study for Ph.D. students under the direction of a faculty member, culminating in a written report. May be repeated for a maximum of 12 credit hours.

INFO-B 790 Informatics Research Rotation (3 cr.)
Work with faculty, investigate research opportunities. Can be repeated for a total of 6 credit hours.

INFO-B 890 Thesis Readings and Research (1-12 cr.)
Research under the direction of a member of the graduate faculty leading to a Ph.D. dissertation. Can be repeated for credit for a total of 30 credit hours.

INFO-G 599 Thesis Research (0 cr.)
Master's students who have enrolled in 30 or more hours of graduate course work applicable to the degree and who have completed all other requirements of the degree except the thesis of final project of performance may enroll in GS99. Requires section authorization.

INFO-H 504 Social Dimensions of Science Informatics (3 cr.)
Course will examine ethical, legal, and social issues surrounding contemporary research and practice in science informatics. Topics include the nature of science and technology, the ramifications of recent advances in science informatics, and relevant science policy and research ethics. General knowledge of science informatics is assumed.

INFO-H 550 Legal and Business Issues in Informatics (3 cr.)
This course is intended for students who are interested in starting their own company or who anticipate joining a start-up company. It will provide students with a solid foundation on a variety of legal and business matters that need to be considered when starting a new company, such as selecting a business structure (sole proprietorship, partnership, corporation, etc.), financing and credit, drafting business plans, preparing appropriate paperwork such as articles of incorporation and bylaws, tax implications, marketing and public relations, bankruptcy and other pitfalls, insurance, planning for growth, resources for entrepreneurs, contracts, real and personal property, shareholder and governance issues and working with professionals such as attorneys, accountants and insurance agents.

INFO-H 611 Mathematical and Logical Foundations of Informatics (3 cr.)
An introduction to mathematical methods for information modeling, analysis, and manipulation. The topics include proof methods in mathematics, models or computation, counting techniques and discrete probability, optimization, statistical inference and core advanced topics that include, but are not limited to, Markov chains and random walks, random graphs, and Fourier analysis.

INFO-I 557 Informatics Research Design (3 cr.)
Full spectrum of research concepts, designs, and methodologies used in informatics research, from quantitative to qualitative research; from deterministic, hypothesis-driven experimental designs to a posteriori discovery through data mining. Philosophical foundations to practical applications. Provides the conceptual framework in which the informatics graduate student may develop their own research agenda.

Informatics

INFO-B 501 Introduction to Informatics (3 cr.)
Basic information representation and processing; searching and organization; evaluation and analysis of information. Internet-based information access tools; ethics and economics of information sharing.

INFO-B 505 Informatics Project Management (3 cr.)
This course introduces standard project management concepts and capabilities, in the context of innovative and creative knowledge-work projects involving computers. These are targeted as a common ground for all members of a successful team, not only for the Project Manager.
Through lecture, reading, discussion, computer lab exercises, and projects, students will become more proficient with basic project management terminology, techniques and technologies. Students will apply industry-standard project management in a framework of productive team dynamics, consumer frame of reference, and organizational change and optionally continuing to professional certification.

INFO-B 510 Data Acquisition and Laboratory Automation (3 cr.) This course covers the entire process by which signals from laboratory instruments are turned into useful data: (1) fundamentals of signal conditioning and sampling; (2) interfacing, communications, and data transfer; (3) markup languages and capability systems datasets; (4) general lab automation; (5) robotics. A significant portion of this course is devoted to practical learning using LabVIEW.

INFO-B 512 Scientific and Clinical Data Management (3 cr.) Management and mining of data generated in scientific laboratories and clinical trials for data mining and knowledge discovery requires robust solutions that include knowledge discovery techniques and databases, extraction of data/metadata stored in data warehouses that use Storage Use Networks and dealing with security issues of handling this data.

INFO-B 530 Foundations of Health Informatics (3 cr.) This course will introduce the foundation of health informatics. It will review how information sciences and computer technology can be applied to enhance research and practice in healthcare. The basic principles of informatics that govern communication systems, clinical decisions, information retrieval, telemedicine, bioinformatics and evidence based medicine will be explored.

INFO-B 531 Seminar in Health Informatics (1-3 cr.) Variable topic. Emphasis is on advanced topics and research in health informatics.

INFO-B 535 Clinical Information Systems (3 cr.) Clinical Information Systems includes: human computer interface and systems design; healthcare decision support and clinical guidelines; system selection; organizational issues in system integration; project management for information technology change; system evaluation; regulatory policies; impact of the Internet; economic impacts of e-health; distributed healthcare information technologies and future trends.

INFO-B 551 Independent Study in Health Informatics (1-3 cr.) Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit. Total credit for seminars and independent study courses may not exceed 9 hours.

INFO-B 578 Data Analysis for Clinical Administrative Decision Making (3 cr.) P: INFO I575 Focuses on understanding, manipulating, and analyzing quantitative data in nursing and healthcare. Includes use of computer-based systems for data management and statistical analysis. Application and interpretation of multivariate statistical models for decision making.

INFO-B 581 Health Informatics Standards and Terminologies (3 cr.) Health information standards specify representation of health information for the purpose of communication between information systems. Standards not only standardize data formats, but also the conceptualizations underlying the data structures. The design process of data standards, domain analysis, conceptualization, modeling, and the methods and tools commonly used are explored.

INFO-B 582 Health Information Exchange (3 cr.) This course describes the drivers and challenges, the data and services of electronic health information exchange (HIE). The five focus areas of HIE are reviewed relative to strategies and actions: Aligning Incentives; Engaging Consumers; Improving Population Health; Managing Privacy, Security and Confidentiality; and, Transforming Care Delivery.

INFO-B 583 Security and Privacy Policies and Regulations for Health Care (3 cr.) This course discusses privacy and security regulations for health care information transactions including policy, procedures, guidelines, security architectures, risk assessments, disaster recovery, and business continuity. Particular attention is given to the Health Insurance Portability and Accountability Act (HIPAA) and the Health Information Technology for Economic and Clinical Health (HITECH) Act.

INFO-B 584 Practicum in Health Information Technology (3 cr.) This course provides an opportunity for the learner to synthesize all previous coursework and to demonstrate beginning competency in Health Information Technology (HIT) applications. The course employs an application focus in which the learner demonstrates comprehension, critical thinking, and problem-solving abilities within the context of a real-world environment.

INFO-B 590 Topics in Informatics (3 cr.) Variable topic. Emphasis is on new developments and research in informatics. Can be repeated with different topics, subject to approval of the Dean.

INFO-B 600 Professionalism and Pedagogy in Informatics (3 cr.) This course introduces students to topics and skills necessary for entering careers in industry or the academy. Topics covered include career planning, curriculum development, effective teaching, research ethics, scholarly and trade publishing, grantsmanship, and intellectual property consideration.

INFO-B 605 Social Foundations of Informatics (3 cr.) Topics include the economics of information businesses and information societies, legal and regulatory factors that shape information and information technology use, the relationship between organization cultures and their use of information and information technology, and ownership of intellectual property.

INFO-B 641 Business of Health Informatics (3 cr.) This class focuses on the economic importance of healthcare information technology adoption for value realization, as a strategic asset, as an investment, and transformation toward integrated decision making. Topics covered include but are not limited to implementation of Decision Support System, barcode tracking, Electronic Health Records, pay-for-performance incentives for e-prescribing.

INFO-B 642 Clinical Decision Support Systems (3 cr.) This course provides an overview of the background
and state-of-the-art Clinical Decision Support Systems (CDSS). Topics include: the design principles behind clinical decision support systems, mathematical foundations of the knowledge-based systems and pattern recognition systems, clinical vocabularies, legal and ethical issues, patient centered clinical decision support systems, and the applications of clinical decision support systems in clinical practice.

INFO-B 643 Natural Language Processing and Text Mining for Biomedical Records and Reports (3 cr.)
This course familiarizes students with applications of Natural Language Processing and text mining in health care. While the course provides a short introduction to commonly used algorithms, techniques and software, the focus is on existing health care applications including clinical records and narratives, biomedical literature and claims processing.

INFO-B 667 Seminar in Health Informatics I (3 cr.)
This course provides graduate students with advanced knowledge on a wide range of technical and analytical topics in health informatics. The course involves a combination of lectures, practicums, and discussions to engage students in the various aspects of an informaticist's role. The topics and presenters will be different each semester.

INFO-B 668 Seminar in Health Informatics II (3 cr.)
This course provides graduate students with knowledge on a wide range of current topics in health informatics from faculty and professionals engaged in cutting edge research and practice. Students connect with innovative faculty while learning through a combination of lectures, practicums, and discussions. The topics and presenters will be different each semester.

INFO-B 690 Topics in Informatics (3 cr.) 
Variable topic. Course is intended for Ph.D. students in the School of Informatics. Can be repeated with different topics, subject to approval of the dean.

INFO-B 691 Thesis/Project in Health Informatics (1-6 cr.)
The student prepares and presents a thesis or project in the area of health informatics. The product is substantial, typically multi-chapter paper or carefully designed and evaluated application, based on well-planned research or scholarly project. Details are worked out between the student and sponsoring faculty member.

INFO-B 698 Research in Informatics (1-12 cr.)
Research under the direction of a member of the graduate faculty that is not dissertation related. Can be repeated for credit for a total of 30 credit hours.

INFO-B 699 Independent Study in Informatics (1-3 cr.)
Independent readings and research for Ph.D. students under the direction of a faculty member, culminating in a written report. May be repeated for a maximum of 12 credit hours.

INFO-B 790 Informatics Research Rotation (3 cr.)
Work with faculty, investigate research opportunities. Can be repeated for a total of 6 credit hours.

INFO-B 890 Thesis Readings and Research (1-12 cr.)
Research under the direction of a member of the graduate faculty leading to a Ph.D. dissertation. Can be repeated for credit for a total of 30 credit hours.

INFO-G 599 Thesis Research (0 cr.)
Master's students who have enrolled in 30 or more hours of graduate course work applicable to the degree and who have completed all other requirements of the degree except the thesis of final project of performance may enroll in G599. Requires section authorization.

INFO-H 550 Legal and Business Issues in Informatics (3 cr.)
This course is intended for students who are interested in starting their own company or who anticipate joining a start-up company. It will provide students with a solid foundation on a variety of legal and business matters that need to be considered when starting a new company, such as selecting a business structure (sole proprietorship, partnership, corporation, etc.), financing and credit, drafting business plans, preparing appropriate paperwork such as articles of incorporation and bylaws, tax implications, marketing and public relations, bankruptcy and other pitfalls, insurance, planning for growth, resources for entrepreneurs, contracts, real and personal property, shareholder and governance issues and working with professionals such as attorneys, accountants and insurance agents.

INFO-H 611 Mathematical and Logical Foundations of Informatics (3 cr.)
An introduction to mathematical methods for information modeling, analysis, and manipulation. The topics include proof methods in mathematics, models or computation, counting techniques and discrete probability, optimization, statistical inference and core advanced topics that include, but are not limited to, Markov chains and random walks, random graphs, and Fourier analysis.

INFO-I 575 Informatics Research Design (3 cr.)
Full spectrum of research concepts, designs, and methodologies used in informatics research, from quantitative to qualitative research; from deterministic, hypothesis-driven experimental designs to a posteriori discovery through data mining. Philosophical foundations to practical applications. Provides the conceptual framework in which the informatics graduate student may develop their own research agenda.

Human-Centered Computing
INFO-B 505 Informatics Project Management (3 cr.)
This course introduces standard project management concepts and capabilities, in the context of innovative and creative knowledge-work projects involving computers. These are targeted as a common ground for all members of a successful team, not only for the Project Manager. Through lecture, reading, discussion, computer lab exercises, and projects, students will become more proficient with basic project management terminology, techniques and technologies. Students will apply industry-standard project management in a framework of productive team dynamics, consumer frame of reference, and organizational change and optionally continuing to professional certification.

INFO-G 599 Thesis Research (0 cr.)
Master's students who have enrolled in 30 or more hours of graduate course work applicable to the degree and who have completed all other requirements of the degree except the thesis of final project of performance may enroll in G599. Requires section authorization.
INFO-H 500 Fundamental Comp Concepts Info (3 cr.)
An introduction to fundamental principles of computer concepts for Informatics study, including an overview of computer architecture, computer algorithms, fundamentals of operating systems, data structure, file organization and database concepts.

INFO-H 501 Introduction to Informatics (3 cr.)
Basic information representation and processing; searching and organization; evaluation and analysis of information. Internet-based information access tools; ethics and economics of information sharing.

INFO-H 502 Human-Centered Research Methods in Informatics (3 cr.)
This course surveys a broad range of research methods employed in Informatics, exploring their meta-theoretical underpinnings and exemplifying their application to specific research questions. This course is intended for students in Informatics graduate programs, especially PhD students, who need a grounding in research methods.

INFO-H 503 Social Impact of Information Technologies (3 cr.)
An overview of important social, legal, and ethical issues raised by information technology.

INFO-H 504 Social Dimensions of Science Informatics (3 cr.)
Course will examine ethical, legal, and social issues surrounding contemporary research and practice in science informatics. Topics include the nature of science and technology, the ramifications of recent advances in science informatics, and relevant science policy and research ethics. General knowledge of science informatics is assumed.

INFO-H 506 Globalization and Information (3 cr.)
Explores the processes that promote and impede movement of human action and informational activities to the most general levels, e.g., the level of the world as a whole. Surveys diverse theories of globalization to identify the best approaches for professional informatics career planning and making information globally accessible.

INFO-H 525 Organizational Informatics and Economics Security (3 cr.)
Organizational process embed implicit and explicit decisions and information control. Security technologies and implementations make explicit organizational choices that determine individual autonomy within an organization. Security implementations allocate risk, determine authority over processes, make explicit relationships in overlapping hierarchies, and determine trust extended to organizational participants.

INFO-H 534 Seminar in Human-Computer Interaction (1-3 cr.)
Topics vary yearly and include the following: information visualization, immersive technologies, designing hypermedia for educational applications, user-centered design techniques and tools, formal methods and cognitive modeling in HCI.

INFO-H 536 Foundational Mathematics of Cybersecurity (3 cr.)
Students will learn mathematical tools necessary to understand modern cyber security. The course will cover introductory mathematical material from a number of disparate fields, including probability theory, computational theory, complexity theory, group theory, and information theory.

INFO-H 537 Legal and Social Informatics of Security (3 cr.)
This is a case-based course on privacy and security in social contexts. Cases will particularly address the specific designs of technologies (e.g., P3P, PICS) and discuss how different technically feasible design choices would result in distinct regulatory regimes, business strategies, or support different forms of social interaction. This course will focus on specific security and privacy technologies as socio-technical systems.

INFO-H 538 Introduction to Cryptography (3 cr.)
Introduction to the foundational primitives of cryptography and implementations. A primary goal of this course will be to understand the security definitions for each primitive and how they are used in cryptographic protocols. The ethics of insecure or on-the-fly protocol design will be discussed.

INFO-H 539 Cryptographic Protocols (3 cr.)
The class teaches a basic understanding of computer security by looking at how things go wrong, and how people abuse the system. The focus of the class is on how computer systems are attacked, and once this is understood it is possible to propose ways to make the system secure.

INFO-H 540 Data Mining for Security (3 cr.)
The objective of this course is to provide an understanding of the impact of data mining in security with a particular focus on intrusion detection. There will be an introduction to data mining where data mining techniques including association rules, clustering and classification are described. Security basics will be presented, focusing on topics such as authentication and access control that are relevant to data mining. This seminar course will explore recent research work in this area and intrusion detection.

INFO-H 541 Interaction Design Practice (3 cr.)
Human-computer interaction design (HCID) describes the way a person or group accomplishes tasks with a computer: what the individual or group does and how the computer responds; what the computer does and how the individual or group responds. Sometimes known as ‘interface design,’ HCID becomes increasingly important as computing intelligence and connectivity spread ubiquitously to home, work, and play environments. This course will be organized around a collection of readings and several design projects concerned with applying human-computer interaction principles to the design, selection, and evaluation of interactive systems.

INFO-H 543 Interaction Design Methods (3 cr.)
Students will learn basic concepts and methods for usability studies and evaluation of interactive systems as well as apply those methods to actual system design evaluations. This course is not only for understanding the basics and traditional approaches in this area, but also for exploring new ways of evaluating the usability of state-of-the-art technology-based systems such as systems in ubiquitous computing, CSCW, tangible and social computing areas.

INFO-H 550 Legal and Business Issues in Informatics (3 cr.)
This course is intended for students who are interested in starting their own company or who anticipate joining a start-up company. It will provide students with a solid foundation on a variety of legal and business matters that need to be considered when starting a new company, such as selecting a business structure (sole proprietorship, partnership, corporation, etc.), financing and credit, drafting business plans, preparing appropriate paperwork such as articles of incorporation.
and bylaws, tax implications, marketing and public relations, bankruptcy and other pitfalls, insurance, planning for growth, resources for entrepreneurs, contracts, real and personal property, shareholder and governance issues and working with professionals such as attorneys, accountants and insurance agents.

**INFO-H 554 Independent Study in Human-Computer Interaction (1-3 cr.)** Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit. Total credit for seminars and independent study courses may not exceed nine 9 hours.

**INFO-H 561 Meaning and Form in HCI (3 cr.)** As a continuation of HCI1 (H541), students will learn methodologies and principles for two types of core activities in human-computer interaction design: a) requirements analysis, contextual inquiry and ethnography as applied to the design of interactive systems in the social context? b) conceptual design for the modeling of the interactive structure of web, hypermedia and software applications. Weekly readings on the text books will be integrated with academic and professional articles and online media.

**INFO-H 563 Psychology of Human Computer Interaction (3 cr.)** Covers the psychological and behavioral science of human computer interaction, including cognitive architecture, memory, problem-solving, mental models, perception, action, and language. Emphasis is placed on developing an understanding of the interaction between human and machine systems and how these processes impact the design and testing of interactive technologies.

**INFO-H 564 Prototyping for Interactive Systems (3 cr.)** The course covers methodologies for designing and prototyping graphic user interfaces, including rapid (paper) and dynamic (interactive) prototypes. Principles of design research and visual communication are discussed in the context of interaction design, cognition and user behavior, as well as usability testing techniques for concept validation.

**INFO-H 590 Topics in Informatics (3 cr.)** Variable topic. Emphasis is on new developments and research in informatics. Can be repeated with different topics, subject to approval of the Dean.

**INFO-H 600 Professionalism and Pedagogy in Informatics (3 cr.)** Course will introduce students to topics and skills necessary for entering careers in industry or the academy. Topics covered will include career planning, curriculum development, effective teaching, research ethics, scholarly and trade publishing, grantsmanship, and intellectual property consideration.

**INFO-H 604 Human Computer Interaction Design Theory (3 cr.)** The course will explore, analyze, and criticize underlying assumptions and the rational rationale behind some of the most influential theoretical attempts in HC and related fields. The purpose of the course is to make students aware of how theories can influence practice and to develop critical thinking around the role, purpose, and function of theories.

**INFO-H 605 Social Foundations of Informatics (3 cr.)** Topics include the economics of information businesses and information societies, legal and regulatory factors that shape information and information technology use, the relationship between organization cultures and their use of information and information technology, and ownership of intellectual property.

**INFO-H 611 Mathematical and Logical Foundations of Informatics (3 cr.)** An introduction to mathematical methods for information modeling, analysis, and manipulation. The topics include proof methods in mathematics, models or computation, counting techniques and discrete probability, optimization, statistical inference and core advanced topics that include, but are not limited to, Markov chains and random walks, random graphs, and Fourier analysis.

**INFO-H 624 Advanced Seminar I–Human-Computer Interaction (3 cr.)** P: Advanced graduate standing or consent of instructor. Introduces students to major historical, contemporary, and emerging theories, methods, techniques, technologies, and applications in the field of human-computer interaction. Students will explore relevant and influential research, results, and application. Students will design an independent research program in relation to their individual research fields and personal interests.

**INFO-H 628 Advanced Seminar I in Compex Systems (3 cr.)** Introduces students to major historical contemporary and emerging theories, methods, and techniques in the field of complex systems. Students will examine and explore relevant and influential research, results and applications. Students will develop an understanding of leading research approaches and paradigms, and will design an independent research program in relation to their individual research fields and personal interests. The course will focus on the theory of complex systems, systems science and artificial life.

**INFO-H 634 Advanced Seminar II – Human Computer Interaction (3 cr.)** P: Advanced graduate standing or consent of instructor. Introduces students to major historical, contemporary, and emerging theories, methods, techniques, technologies, and applications in the field of human-computer interaction. Students will explore relevant and influential research, results, and applications. Students will develop an understanding of leading research approaches and paradigms, and will design an independent research program in relation to their individual research fields and personal interests.

**INFO-H 628 Advanced Seminar II in Compex Systems (3 cr.)** Introduces students to major historical contemporary and emerging theories, methods, and techniques in the field of complex systems. Students will examine and explore relevant and influential research, results and applications. Students will develop an understanding of leading research approaches and paradigms, and will design an independent research program in relation to their individual research fields and personal interests. The course will be an exposition of “the science at the edge” and the forefront of research to complex systems.

**INFO-H 651 The Ethnography of Informatics (3 cr.)** Introduces ethnography as a social science methodology and way of knowing with which to study information and its social contexts. Places ethnography in relation to other research methodologies relevant to the production of the
informatics knowledge base. Trains students in the use of a broad range of ethnographic techniques relevant to the study of automated information technology in use. Designed to be open to students from other programs with sufficient methodological and substantive background.

INFO-H 680 Human-Computer Interaction Professional Practice I (3 cr.) P: INFO H541, H561, H543, H563, H564 This course represents Part One of a two-part course series, which fulfills the final HCI MS project requirement. Part One should showcase the accumulative knowledge of the student in the areas of product design and development. Students will explore relevant and applied research concepts, while considering various HCI design approaches. Final outcomes will include the completion of the first half of the final project, i.e., the completion of a final product.

INFO-H 681 Human Computer Interaction Professional Practice II (3 cr.) P: INFO H680 This course represents part two of a two-part course series, which fulfills the final HCI MS project requirement. The project will showcase the accumulative knowledge of the student in the areas of product assessment and documentation. Final outcomes will include the completion of the second half of the final project, i.e. product testing and analysis and writing of the paper.

INFO-H 690 Topics in Informatics (3 cr.) Variable topic. Emphasis on new developments and research in informatics. Course is intended for Ph.D. students in the School of Informatics. Can be repeated with different topics, subject to approval of the dean.

INFO-H 694 Thesis/Project in Human-Computer Interaction (1-6 cr.) The student prepares and presents a thesis or project in an area of human-computer interaction. The product is substantial, typically multi-chapter paper, or a carefully designed and evaluated application, based on well-planned research or scholarly project. Details are worked out between the student and sponsoring faculty member.

INFO-H 698 Research in Informatics (1-12 cr.) Research under the direction of a member of the graduate faculty that is not dissertation related. Can be repeated for credit for a total of 30 credit hours.

INFO-H 699 Independent Study in Informatics (1-3 cr.) Independent readings and research for Ph.D. students under the direction of a faculty member, culminating in a written report. May be repeated for a maximum of 12 credit hours.

INFO-H 790 Informatics Research Rotation (3 cr.) Work with faculty, investigate research opportunities. Can be repeated for a total of 6 credit hours.

INFO-H 890 Thesis Readings and Research (1-12 cr.) Research under the direction of a member of the graduate faculty leading to a Ph.D. dissertation. Can be repeated for credit for a total of 30 credit hours.

INFO-I 575 Informatics Research Design (3 cr.) Full spectrum of research concepts, designs, and methodologies used in informatics research, from quantitative to qualitative research; from deterministic, hypothesis-driven experimental designs to a posteriori discovery through data mining. Philosophical foundations to practical applications. Provides the conceptual framework in which the informatics graduate student may develop their own research agenda.

Masters Level Courses

SLIS-S 501 Reference (3 cr.) P: or Concurrent S401. This course introduces students to the basic information sources and services among different types of libraries and information centers, including academic, public, special, and school media.

SLIS-S 502 Collection Development and Management (3 cr.) Collection Development and Management examines the principles and techniques that guide the development, management, and evaluation of library collections and the selection of materials in various types of libraries. The course provides students with experience in the major phases involved in starting and developing collections of print and non-print materials: the formulation of collection development plans, the selection of materials, and the evaluation and preservation of library collections. It enables students to recognize and respond to challenges and opportunities of special interest to collection development and methodological issues. The production and distribution of information resources, issues of access and ownership, intellectual freedom, copyright, and resource sharing.

SLIS-S 503 Organization and Representation of Knowledge and Information (3 cr.) Introduces students to various disciplines’ approaches to the understanding, organization, representation (summarizing), and use of knowledge and information. This survey looks for commonality among the approaches taken in information science, cognitive psychology, semiotics, and artificial intelligence, among others. The goal is to identify criteria for evaluation and improvement of ways to organize and represent information for future retrieval. Information systems currently used in libraries and information centers will be studied as examples. Emphasis is on concepts and ideas, with appropriate attention to terminology and technology.

SLIS-S 504 Cataloging (3 cr.) P: S401. Historical development and principles essential to the understanding of the conceptual foundations of providing bibliographic access and control of materials and information. Discussion and examples in the application of AACR2r will be presented to illustrate and reflect current practice. Emphasis is on monographic publications.

SLIS-S 505 Evaluation of Library Sources and Services (3 cr.) P: S502. Examines the applied evaluation of library resources and services, including collections, document delivery, technical services, reference services, and overall library performance. Emphasis is placed on the available methods and methodological issues. The checklist method, availability studies, document delivery tests, use studies, applied bibliometrics, and the use of automation are covered.

SLIS-S 506 Introduction to Research (3 cr.) P: S401, completion of 6 credit hours in SLIS (S501 and S502 recommended), or consent of instructor. Introduces the research process, including concepts, design, conduct, and evaluation. Examines the principles and characteristics of approaches and methodologies relevant to research in the field. Examples of data sources and
introduction to methods of statistical description and analysis; ethical issues.

SLIS-S 511 Database Design (3 cr.) P: S401 or consent of instructor. Concerned with a comprehensive view of the processes involved in developing formal access to information from a user-centered point of view. Considers various database models (such as flat file, hierarchical, and relational), and hypertext (in terms of text, sound, numeric, image, and geographic data). Students will design and implement databases using several commercial database management systems.

SLIS-S 516 Human-Computer Interaction (3 cr.)
Examines the human factors associated with information technology and seeks to provide students with knowledge of the variables likely to influence the perceived usability, and hence the acceptability, of any information technology. In so doing, it will enable students to progress further toward specialist work in the important field of human-computer interaction.

SLIS-S 517 Web Programming (3 cr.)
The main focus of this course is to instruct students to develop and implement dynamic and interactive web applications. In order to do so, students will learn the basics of an open source programming language both through lectures and hands-on exercises in the lab.

SLIS-S 519 Evaluation of Information Systems (3 cr.)
P: S401. Theoretical and practical exploration of the issues surrounding contemporary information systems. A specific focus will be on evaluating information systems from the user perspective. This evaluation approach will cut across disciplinary frameworks: behavioral, cognitive, and social sciences. The approach will also touch on multiple research methods: online surveys, sense-making, critical incident, and network analysis.

SLIS-S 521 Humanities Information (3 cr.)
P: S501 or consent of instructor. Introduction to information sources and services in the disciplines of performing arts, music, fine arts, literature, language, philosophy, and religion. In addition, the course addresses information needs and behavior patterns of users seeking these types of information.

SLIS-S 522 Social Sciences Information (3 cr.)
P: S401 and S501 or consent of instructor. Study of the core information tools in the fields of anthropology, economics, history, political science, psychology, and sociology. Includes key bibliographic databases and electronic network tools. Evaluation of research dealing with information channels in these fields.

SLIS-S 523 Science and Technology Information (3 cr.)
P: S401 and S501. General materials, reference books, periodicals, government documents, nonbook media in the individual literature of individual disciplines; patents and report literature. Examination of production, publication, distribution, and forms of scientific and technical literature.

SLIS-S 524 Adult Readers Advisory (3 cr.)
P: S501 and S502. A review and discussion of trends reflected in subject content and use of book and nonbook materials for patrons in secondary school and public libraries in relation to changing young adult and adult needs and the role of libraries in meeting such needs.

SLIS-S 525 Government Information (3 cr.)
P: S401 and S501. Survey of government information dissemination in all formats and at all levels of government. Consideration of government information policy. Primary emphasis given to U.S. government information but some consideration given to state and local publications in the United States, and those of international organizations.

SLIS-S 526 Business Information (3 cr.)
P: S401 and S501 or consent of instructor. Introduction to basic business materials. Includes resources, research methods, current developments, automated systems, and databases.

SLIS-S 532 Information Architecture for the Web (3 cr.) P: S401. Focuses on website development. Students study information architecture as an approach for site organization and design, and learn about product management for complex web development tasks. In lab sessions, students work with markup languages and scripting and develop sites, typically for real clients, as well as local libraries.

SLIS-S 533 Online Searching (3 cr.)
P: S401 or consent of instructor. Principles, methods, and techniques of advanced online information retrieval (IR). Characteristics of and search strategies for the use of bibliographic, referral, citation, fact, numeric, and full text databases and search systems. Considers standards, use of communications software, front-ends and micro-based IR systems, and creation of in-house databases.

SLIS-S 541 Information Policy (3 cr.)
Data creation, publication, dissemination, and use occur in a complex social context. Legal and regulatory structures continue to evolve to control these processes. This course explores international and U.S. principles, laws, and regulations affecting the information industry. Focus varies with the topic; for example, copyright of electronic information sources or transborder data flow. May be repeated for credit when topic varies.

SLIS-S 550 Perspectives on Librarianship (3 cr.)
Overview of the library as a social institution-historically, currently, and for the future-within social, economic, political, and cultural contexts. Focuses on the institution, the collections and formats, and the users to create an understanding of the role and importance of libraries. S550 provides excellent opportunities to help students explore the library profession.

SLIS-S 551 Library Management (3 cr.)
Management and administration of all types of libraries. Covers basics of organizational structure, planning, budget management, human resources issues and skills, and an understanding of the manager in the context of the organization.

SLIS-S 552 Academic Library Management (3 cr.)
Management and administration of academic libraries, including specific material related to organization structure, planning, budget management, human resources issues and skills, and an understanding of the manager in the context of a higher education environment.

SLIS-S 553 Public Library Management (3 cr.)
Management and administration of public libraries, including specific material related to organization structure, planning, budget management, human
resources issues and skills, and an understanding of the manager in the context of a community environment.

SLIS-S 554 Library Systems (3 cr.) P: S401. Principles for the design, selection, implementation and management of automated systems of all types in libraries, including systems for technical services processing, reference and user services, and management. Focus is on present and future applications of technology in libraries, their technical features, and their implications for library services and management. When possible, some practical experience with a particular application will be provided.

SLIS-S 556 Systems Analysis and Design (3 cr.) P: computer or consent of instructor. This course introduces the basic concepts underlying systems analysis and design, focusing on contextual inquiry/design and data modeling, as well as the application of those analysis techniques in the analysis and design of organizational information systems.

SLIS-S 571 Materials for Youth (3 cr.) Evaluation and use of books, magazines, recordings, films, radio and television broadcasts, and other sources of information and recreation.

SLIS-S 572 Youth Services (3 cr.) P: S571 or consent of instructor. This course emphasizes the history, philosophy, and description of children and young adult library services. It takes a holistic look at the role of the youth services librarian from planning and evaluation to specific services and programs, and examines the current and future outlook for this type of librarianship. Emphasis is on the public library, but cooperation with appropriate services and programs, such as school media centers, is also discussed.

SLIS-S 573 Education of Information Users (3 cr.) P: S401, S501 or S516. Introduces students to the roles of librarians in adult education in university and college libraries and in public libraries. The course explores information literacy, library instructional models, education and training theories, and practical approaches for optimizing learning opportunities in library-based settings. Information literacy standards from the Association of College and Research Libraries (ACRL) and others are explored and applied to instructional design and practice. S573 also introduces students to outcomes-based planning and evaluation, a process for planning library-based educational programs with outcomes, or specific learning objectives in-mind.

SLIS-S 574 Information Inquiry for School Teachers (3 cr.) Information Inquiry for School Teachers (3 cr.; formerly L551) This course is intended to be an opportunity for teachers and future teachers (including school library media specialists as teachers) to practice methods in critically thinking about information/media, and to use the inquiry process as a means to teach their students to be critical reviewers and communicators as well. Application of national and state standards for information literacy K - 12. Offered over the Internet.

SLIS-S 580 History of Libraries (3 cr.) Development of libraries and information service from earliest times to the present, with emphasis on the library in relation to social, economic, cultural, and political trends.

SLIS-S 581 Archives and Records Management (3 cr.) Introduces basic theories, methods, and significant problems in archives and records management. The course also discusses how archivists are responding to the challenge of managing and preserving electronic records.

SLIS-S 582 Preservation (3 cr.) Examines causes of library and archival materials deterioration. Develops conceptual framework and management perspective for preservation programs using technical standards, program development tools, scientific and administrative research reports, and advocacy literature. Explores the new information technologies and media as both preservation tools and challenges.

SLIS-S 601 Directed Readings (1-4 cr.) P: Consent of instructor. Readings and study in any area of library or information science having an extensive literature. A student may enroll for this course twice in the same semester under different instructors. Normally S601 is completed under the direction of a full-time faculty member. Readings done under S601 shall not duplicate the content of any course now in the curriculum of the School of Library and Information Science. Proposal Form due by March 15th.

SLIS-S 602 Directed Research (1-3 cr.) P: Proposal form and consent of instructor and 15 SLIS graduate credit hours completed including S505 or S506. Individual research in a problem in the field of library and information science.

SLIS-S 603 Workshop in Library and Information Science (1-3 cr.) Group study of specific problems in the library and information field. Generally includes a hands-on element. No more than 6 hours of S603 credit may be used toward the requirements for any SLIS degree.

SLIS-S 604 Topics in Library and Information Science (1-4 cr.) Study of specific topics in librarianship and preservation. May be repeated for credit when topic varies. Same course number used for different courses.

SLIS-S 605 Internship in Library and Information Science (2-6 cr.) P: Permission of faculty advisor. Graded S/F. Supervised internship in an information management environment. Professionals in library and information management mentor each graduate student. Sixty on-site hours must be completed for each credit earned. Students document their experiences through journals, abstracts of related publications, and a final presentation. Normally, at least 18 credits must be completed before enrollment*. Guidelines and placement listings are available on the SLIS website.

SLIS-S 621 Audio and Video Sources (3 cr.) P: S401 concurrent or consent of instructor. User-focused approach to decision making in the digital audio and video information environment. Emphasizes collection development in support of user services, including access to remote collections and evaluation of multimedia materials and delivery mechanisms, and issues related to emerging technologies. Scope includes adult and young adult audiences.

SLIS-S 622 Resources and Services for People with Disabilities (3 cr.) Access to information is essential for sustained independence of people with disabilities.
This course studies materials, services, and assistive technologies to support this access.

**SLIS-S 623 Genealogy and Local History (3 cr.)**
P: S401, S501, & S502. This course is designed to focus on two specific collection areas: Genealogy Resources and Indiana Resources. Students will work on developing collection policies creating collections with limited funding and evaluating existing special collections. The class will also look at the pros and cons of several issues (staffing issues, volunteers, integrated collections, circulating/non-circulating, limited resources, material types).

**SLIS-S 631 Advanced Cataloging (3 cr.)** P: S504. Provides extensive background in description and access for electronic and non-book resources.

**SLIS-S 632 Technical Services (3 cr.)** C: S553, S551, S552 or consent of instructor. Principles of organization and function of library technical services, including acquisition, cataloging, serials, circulation. Special emphasis on research and development in library systems and technology. Includes file organization, documentation system development, analysis, and evaluation for manual, mechanical, and automated applications.

**SLIS-S 640 Seminar in Intellectual Freedom (3 cr.)** P: 9 hours of SLIS graduate credit or permission of instructor. Beginning with a history of and alternative philosophical justifications for censorship, the student is introduced to constraints, obligations, and problems relating to intellectual freedom.

**SLIS-S 644 Consumer Health Informatics (3 cr.)** P: S401, S501 or consent of instructor. This is a consumer health informatics course in which students will learn about how technologies are used to deliver healthcare to the public.

**SLIS-S 650 Library Philanthropy (3 cr.)** Introduces the role of private giving in support of libraries. Examines personal and corporate philanthropy and their applicability in libraries and information centers.

**SLIS-S 652 Digital Libraries (3 cr.)** This course introduces digital libraries — networked information servers that provide access to multimedia data for local and remote users. Primary emphasis is on developing digital libraries, based on understanding tools for presentation and manipulation of multimedia as well as analysis of user needs.

**SLIS-S 653 Health Science Librarianship (3 cr.)** P: S401, S501 or consent of instructor. Explores the roles of health sciences libraries, librarianship and informationists in academia and hospital libraries, health information technology and information services environments, and in research and administrative teams. This course provides an introduction to the healthcare industry, health sciences schools and education (medicine, nursing, dentistry, public health, pharmacy, allied health and others), and the culture of healthcare in the United States. Students gain extensive experience with popular reference resources, and searching MEDLINE, PubMed, and specialty bibliographic databases in the health sciences. Students will increase their understanding of librarian and informationist roles in information literacy education, evidence based practice, health literacy, and other issues.

**SLIS-S 654 Law Librarianship (3 cr.)** P: S501 or consent of instructor. An introduction to basic legal materials and law librarianship. Primary and secondary resources; indexes; digests and citators; specialized research methods; current developments in automated legal research. History of law libraries in the U.S., their organization and administration. The role of law librarians in law schools and law firms.

**SLIS-S 671 School Media (3 cr.)** P: S501, S571, and S574 or concurrent or consent of instructor. Establishes the professional teaching and administrative role of the certified school library media specialist in K-12 settings. Situations are examined that pertain specifically to policy development, budgeting, collection development, instructional design, support staff training, facility design, district supervision, and information networking within the modern school corporation. Students make site visits to leading school information centers, conferences, and media fairs.

**SLIS-S 672 Seminar on Literature for Youth (3 cr.)** P: S571 or consent of instructor. An advanced seminar, addresses such topics as: images of minority groups, societal problems (e.g., poverty and family patterns), or informational needs and materials including access and availability of print, nonprint, and computer resources. May be repeated for credit when topic varies.

**SLIS-S 681 The Book 1450 to the Present (3 cr.)** A survey of the book from 1450 to the present, with emphasis on the development of the book in the West. Focuses on the physical aspects of the book from the mid-fifteenth through the twentieth centuries, and on some of the many roles of the book in society during this period; also increases awareness of current scholarly trends in the history of the book.

**Media Arts and Science**

**INFO-H 605 Social Foundations of Informatics (3 cr.)**
Topics include the economics of information businesses and information societies, legal and regulatory factors that shape information and information technology use, the relationship between organization cultures and their use of information and information technology, and ownership of intellectual property.

**NEWM-N 500 Principles of Multimedia Technology (3 cr.)**
This course examines issues related to digital media communication in the context of e-commerce and the information industry, especially its impact on the cultural, economic, social, and ethical dimensions of local and global communities. Topics also include: usability, intellectual property, and a diversity of user markets for new media products.

**NEWM-N 501 Foundations of Digital Arts Production (3 cr.)**
This course examines the production process and management of digital multimedia. Students investigate and produce projects by researching foundations in the use of digital video with special emphasis on production process of storytelling. Skills learned will include: project development and video production. Students will develop presentation skills through research papers.
NEWM-N 502 Digital Media Motion and Simulation Methods (3 cr.) Examinations the fundamentals of three-dimensional animation through storyboards and planning, modeling, texturing, lighting, rendering, and composite techniques. Topics will include nurbs design development, texture mapping for realism and stylistic output, keyframe and path animation, and cinematography lighting techniques. Skills will be developed through design and modeling of individual or team multidisciplinary projects.

NEWM-N 503 Digital Media Application Design Processes (3 cr.) Presents the principles and fundamentals of design techniques using authoring tools on PC, Macintosh, and emerging computer platforms. Included are storyboarding, planning and organization of scripts, use of current technology, computers, video and digital arts equipment; computer-assisted design and project planner software tools and management of design team concepts.

NEWM-N 504 Advanced Interactive Design Applications (3 cr.) Incorporates extensive analysis and use of computer and multimedia authoring tools intended for character simulation design. The course will study the concepts of physics-based bipedal movement in relation to gravity, balance, anticipation, potential energy, personality constructs, and locomotion. Assessment modeling for character depiction and animation will be planned and storyboarded. Other topics include more advanced facets of computer animation including paint tube modeling, layered texture mapping, and track and block animation for cyclical actions.

NEWM-N 505 Internship in Media Arts and Technology (3 cr.) An internship program for students to work with and learn from experts in media (digital arts) technology fields who are developing and using new applications in commercial and educational settings. Requirements for interns include the development of a technology project proposal; interview, resume, and project presentation; on-site intern residency; project report; oral and media presentation of project outcomes.

NEWM-N 506 Media Arts Project or Thesis (1-6 cr.) Students prepare a thesis or project that includes supporting documentation, as well as a final public defense. In either case, students are required to prepare a proposal that is approved by their advisor or committee chair before beginning their research.

NEWM-N 510 Web Database Concepts (3 cr.) Addresses diverse issues arising when designing World Wide Web interface. Basic database concepts will be presented but the course will focus on discussion of interface issues specific to Web databases, technologies for linking databases to Web servers for delivery, discussion of various Web-database applications, case studies, and industry trends.

NEWM-N 553 Independent Study (1-3 cr.) Research and/or production related to a particular theme or topic in media arts. Course topic, learning outcomes, and a plan of study must be developed by the student, with guidance from the instructor, prior to registration. Course can be repeated multiple times. Approval by the program advisor is required for registration.

NEWM-N 585 Seminars in Media Arts and Science (3 cr.) Current trends, problems, best practices and developments in new media. Students pursue a special interest and share information and experience with the group. This course is an in-depth exploration of topics and issues at the forefront of new media. Seminar format with research papers and class discussion/presentations.

Informatics
INFO-B 501 Introduction to Informatics (3 cr.) Basic information representation and processing; searching and organization; evaluation and analysis of information. Internet-based information access tools; ethics and economics of information sharing.

INFO-B 505 Informatics Project Management (3 cr.) This course introduces standard project management concepts and capabilities, in the context of innovative and creative knowledge-work projects involving computers. These are targeted as a common ground for all members of a successful team, not only for the Project Manager. Through lecture, reading, discussion, computer lab exercises, and projects, students will become more proficient with basic project management terminology, techniques and technologies. Students will apply industry-standard project management in a framework of productive team dynamics, consumer frame of reference, and organizational change and optionally continuing to professional certification.

INFO-B 510 Data Acquisition and Laboratory Automation (3 cr.) This course covers the entire process by which signals from laboratory instruments are turned into useful data: (1) fundamentals of signal conditioning and sampling; (2) interfacing, communications, and data transfer; (3) markup languages and capability systems datasets; (4) general lab automation; (5) robotics. A significant portion of this course is devoted to practical learning using LabVIEW.

INFO-B 512 Scientific and Clinical Data Management (3 cr.) Management and mining of data generated in scientific laboratories and clinical trials for data mining and knowledge discovery requires robust solutions that include knowledge discovery techniques and databases, extraction of data/metadata stored in data warehouses that use Storage Use Networks and dealing with security issues of handling this data.

INFO-B 530 Foundations of Health Informatics (3 cr.) This course introduces the foundation of health informatics. It will review how information sciences and computer technology can be applied to enhance research and practice in healthcare. The basic principles of informatics that govern communication systems, clinical decisions, information retrieval, telemedicine, bioinformatics and evidence based medicine will be explored.

INFO-B 531 Seminar in Health Informatics (1-3 cr.) Variable topic. Emphasis is on advanced topics and research in health informatics.

INFO-B 535 Clinical Information Systems (3 cr.) Clinical Information Systems includes: human computer interface and systems design; healthcare decision support and
clinical guidelines; system selection; organizational issues in system integration; project management for information technology change; system evaluation; regulatory policies; impact of the Internet; economic impacts of e-health; distributed healthcare information technologies and future trends.

INFO-B 551 Independent Study in Health Informatics (1-3 cr.) Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit. Total credit for seminars and independent study courses may not exceed 9 hours.

INFO-B 578 Data Analysis for Clinical Administrative Decision Making (3 cr.) P: INFO I575 Focuses on understanding, manipulating, and analyzing quantitative data in nursing and healthcare. Includes use of computer-based systems for data management and statistical analysis. Application and interpretation of multivariate statistical models for decision making.

INFO-B 581 Health Informatics Standards and Terminologies (3 cr.) Health information standards specify representation of health information for the purpose of communication between information systems. Standards not only standardize data formats, but also the conceptualizations underlying the data structures. The design process of data standards, domain analysis, conceptualization, modeling, and the methods and tools commonly used are explored.

INFO-B 582 Health Information Exchange (3 cr.) This course describes the drivers and challenges, the data and services of electronic health information exchange (HIE). The five focus areas of HIE are reviewed relative to strategies and actions: Aligning Incentives; Engaging Consumers; Improving Population Health; Managing Privacy, Security and Confidentiality; and, Transforming Care Delivery.

INFO-B 583 Security and Privacy Policies and Regulations for Health Care (3 cr.) This course discusses privacy and security regulations for health care information transactions including policy, procedures, guidelines, security architectures, risk assessments, disaster recovery, and business continuity. Particular attention is given to the Health Insurance Portability and Accountability Act (HIPAA) and the Health Information Technology for Economic and Clinical Health (HITECH) Act.

INFO-B 584 Practicum in Health Information Technology (3 cr.) This course provides an opportunity for the learner to synthesize all previous coursework and to demonstrate beginning competency in Health Information Technology (HIT) applications. The course employs an application focus in which the learner demonstrates comprehension, critical thinking, and problem-solving abilities within the context of a real-world environment.

INFO-B 590 Topics in Informatics (3 cr.) Variable topic. Emphasis is on new developments and research in informatics. Can be repeated with different topics, subject to approval of the Dean.

INFO-B 600 Professionalism and Pedagogy in Informatics (3 cr.) This course introduces students to topics and skills necessary for entering careers in industry or the academy. Topics covered include career planning, curriculum development, effective teaching, research ethics, scholarly and trade publishing, grantmanship, and intellectual property consideration.

INFO-B 605 Social Foundations of Informatics (3 cr.) Topics include the economics of information businesses and information societies, legal and regulatory factors that shape information and information technology use, the relationship between organization cultures and their use of information and information technology, and ownership of intellectual property.

INFO-B 641 Business of Health Informatics (3 cr.) This class focuses on the economic importance of healthcare information technology adoption for value realization, as a strategic asset, as an investment, and transformation toward integrated decision making. Topics covered include but are not limited to implementation of Decision Support System, barcode tracking, Electronic Health Records, pay-for-performance incentives for e-prescribing.

INFO-B 642 Clinical Decision Support Systems (3 cr.) This course provides an overview of the background and state-of-the-art Clinical Decision Support Systems (CDSS). Topics include: the design principles behind clinical decision support systems, mathematical foundations of the knowledge-based systems and pattern recognition systems, clinical vocabularies, legal and ethical issues, patient centered clinical decision support systems, and the applications of clinical decision support systems in clinical practice.

INFO-B 643 Natural Language Processing and Text Mining for Biomedical Records and Reports (3 cr.) This course familiarizes students with applications of Natural Language Processing and text mining in health care. While the course provides a short introduction to commonly used algorithms, techniques and software, the focus is on existing health care applications including clinical records and narratives, biomedical literature and claims processing.

INFO-B 667 Seminar in Health Informatics I (3 cr.) This course provides graduate students with advanced knowledge on a wide range of technical and analytical topics in health informatics. The course involves a combination of lectures, practicums, and discussions to engage students in the various aspects of an informaticist's role. The topics and presenters will be different each semester.

INFO-B 668 Seminar in Health Informatics II (3 cr.) This course provides graduate students with knowledge on a wide range of current topics in health informatics from faculty and professionals engaged in cutting edge research and practice. Students connect with innovative faculty while learning through a combination of lectures, practicums, and discussions. The topics and presenters will be different each semester.

INFO-B 690 Topics in Informatics (3 cr.) Variable topic. Course is intended for Ph.D. students in the School of Informatics. Can be repeated with different topics, subject to approval of the dean.

INFO-B 691 Thesis/Project in Health Informatics (1-6 cr.) The student prepares and presents a thesis or project in the area of health informatics. The product
is substantial, typically multi-chapter paper or carefully designed and evaluated application, based on well-planned research or scholarly project. Details are worked out between the student and sponsoring faculty member.

**INFO-B 698 Research in Informatics (1-12 cr.)**
Research under the direction of a member of the graduate faculty that is not dissertation related. Can be repeated for credit for a total of 30 credit hours.

**INFO-B 699 Independent Study in Informatics (1-3 cr.)**
Independent readings and research for Ph.D. students under the direction of a faculty member, culminating in a written report. May be repeated for a maximum of 12 credit hours.

**INFO-B 790 Informatics Research Rotation (3 cr.)**
Work with faculty, investigate research opportunities. Can be repeated for a total of 6 credit hours.

**INFO-B 890 Thesis Readings and Research (1-12 cr.)**
Research under the direction of a member of the graduate faculty leading to a Ph.D. dissertation. Can be repeated for credit for a total of 30 credit hours.

**INFO-G 599 Thesis Research (0 cr.)**
Master’s students who have enrolled in 30 or more hours of graduate course work applicable to the degree and who have completed all other requirements of the degree except the thesis of final project of performance may enroll in G599. Requires section authorization.

**INFO-H 550 Legal and Business Issues in Informatics (3 cr.)**
This course is intended for students who are interested in starting their own company or who anticipate joining a start-up company. It will provide students with a solid foundation on a variety of legal and business matters that need to be considered when starting a new company, such as selecting a business structure (sole proprietorship, partnership, corporation, etc.), financing and credit, drafting business plans, preparing appropriate paperwork such as articles of incorporation and bylaws, tax implications, marketing and public relations, bankruptcy and other pitfalls, insurance, planning for growth, resources for entrepreneurs, contracts, real and personal property, shareholder and governance issues and working with professionals such as attorneys, accountants and insurance agents.

**INFO-H 611 Mathematical and Logical Foundations of Informatics (3 cr.)**
An introduction to mathematical methods for information modeling, analysis, and manipulation. The topics include proof methods in mathematics, models or computation, counting techniques and discrete probability, optimization, statistical inference and core advanced topics that include, but are not limited to, Markov chains and random walks, random graphs, and Fourier analysis.

**INFO-I 575 Informatics Research Design (3 cr.)**
Full spectrum of research concepts, designs, and methodologies used in informatics research, from quantitative to qualitative research; from deterministic, hypothesis-driven experimental designs to a posteriori discovery through data mining. Philosophical foundations to practical applications. Provides the conceptual framework in which the informatics graduate student may develop their own research agenda.

**Health Information Administration**

**HIA-M 110 Computer Concepts for Health Information (3 cr.)**
Course provides an overview of applications for the health and medical professionals. Topics include: audit trails, generating, quantifying and analyzing medical reports, word processing, computer hardware, medical software, copyright and fair usage. Students retrieve and present medical data.

**HIA-M 210 Data Organization and Presentation in the Healthcare Environment (3 cr.)**
Students will study and apply problem solving, decision analysis and data presentation techniques used in healthcare data representation for both internal and external users. ICD and CPT classification systems will be modeled and analyzed utilizing spreadsheets.

**HIA-M 220 Healthcare Decision Support (3 cr.)**
This course provides an overview of essential information technology tools necessary for quantitative and qualitative decision making in a healthcare environment. Students will learn effective methods to analyze patient data including ICD and CPT classification systems as they relate to decision processes in a healthcare environment.

**HIA-M 270 Foundations and Principles of Health Information Management (2 cr.)**
Course focuses on the administration of foundational principles of management within a health information department. Students will gain an understanding of the language of quantitative methods as well as the processes that are required for health information managers to function in a healthcare environment which demands competency in the areas of profit margins, management of financial resources and complex reimbursement processes.

**HIA-M 275 Effective Communication for the Healthcare Environment (3 cr.)**
Course is designed to develop effective interaction among internal and external customers in a healthcare environment. Emphasis is placed on professional communications with superiors, peers and subordinates in all areas of healthcare. Topics include: policy creation, HIM job descriptions, information technology proposal requests, e-mail etiquette and presentation skills.

**HIA-M 300 Database Design for Health Information Administration (3 cr.)**
Introduction to database design with an emphasis on managing data in the health information environment. Topics and concepts include creating data table relationships and normalization. Utilizing Microsoft Access to create user forms and reports. Students will be required to create a large group project.

**HIA-M 315 Quantitative Methods and Research (2 cr.)**
This course will outline the procedures associated with vital statistics in health care (birth/death certificates). The student will learn about the statistics associated with health care. The research portion will focus on data search and access techniques, national research policy making, biomedical and health research investigation, and research protocol data management.

**HIA-M 322 Hospital Organization and Management (3 cr.)**
Orientation to hospital departments hospital organization; inter- and intra-relationships of hospital and community agencies.
HIA-M 325 Health Care Information Requirements and Standards I (3 cr.) Course outlines the essential documents/data content required for maintaining legal health records using paper and electronic media. Federal, state and local law, accreditation standards and regulatory requirements for maintaining patient data examined. Documentation in acute care, psychiatric and other healthcare settings. Students begin to explore the health information management professions.

HIA-M 326 Laboratory Enrichment for Healthcare Information Requirements and Standards I (1 cr.) This course consists of exercises that reinforce the lectures in HIA-M 325. Students explore up-to-date Web resources used in the healthcare field as well as perform database searches. Students engage in laboratory exercises that consist of evaluating health records for completeness, regulatory compliance and documentation.

HIA-M 327 Healthcare Information Requirements and Standards II (3 cr.) This course is a continuation of HIA-M 325 and includes the ongoing review of health record documentation, in particular secondary data bases such as cancer registry, long term care and other healthcare settings. Healthcare information resources, both in print and on the World Wide Web are researched and examined extensively.

HIA-M 328 Laboratory Enrichment for Healthcare Information Requirements and Standards II (1 cr.) P: M325 This course consists of exercises that reinforce the lectures in HIA-M 327. Students explore Web resources used in the healthcare field and perform extensive database searches.

HIA-M 330 Medical Terminology (3 cr.) The purpose of this course is to further develop a student's understanding and use of medical terminology. There is a focus on spelling and pronunciation, abbreviations, analyzing words based on their root, prefix or suffix as well as identifying common mistakes within medical terminology.

HIA-M 350 Medical Science for Health Information I (3 cr.) This course will cover pathophysiology and pharmacology associated with the body systems.

HIA-M 355 ICD-9-CM Coding (3 cr.) This course will focus on International Classification of Diseases (ICD) and coding. Students will learn how to code, index, and sequence diagnoses and procedures. Ethical coding guidelines will be taught.

HIA-M 356 Laboratory Enrichment for ICD-9-CM Coding (1 cr.) This course is a laboratory for HIA-M 355 that provides hands-on experience in assigning ICD-9-CM codes. Actual patient records are used for coding practice which focuses on correct code assignment and sequencing of codes to follow ethical coding guidelines. Students will also gain hands-on experience with electronic health records and coding software used in the HIM industry.

HIA-M 370 Health information Management (3 cr.) This course will focus on human resources management in a Health information Department. Work scheduling, work flow and work design will be discussed. Other issues in managing an HIM department will be addressed such as education and training, establishing productivity standards, developing a budget and managing contracts.

HIA-M 375 Health information Technology (3 cr.) Introduction to health information standards that have been developed for the electronic health record and information interoperability and standards in development. Emphasis on understanding healthcare organization networks, intranets, the role of the Internet in patient data access, differences between clinical and administrative information systems used in healthcare organizations and the management and maintenance of those systems.

HIA-M 380 Seminar in Health Information Administration (1-3 cr.) Allows the student to refine their skills in planning healthcare seminars for the profession, hospitals, and within the classroom setting. Written summaries and oral presentations required.

HIA-M 400 Health Information Storage and Retrieval (3 cr.) This course will focus on the creation of forms design, including the retrieval, filing, and storage of health care information according to the guidelines established by federal and state regulations. Registries will be discussed with specific focus on the cancer registry and master patient index (MPI).

HIA-M 420 Health Care Planning and Information Systems (3 cr.) Understanding the design of systems, research various vendors, present information so that a selection of information system can be recommended. This course will also address systems planning; systems selection process; clinical and business applications of computing in healthcare; resolving organization information issues.

HIA-M 443 Professional Practicum in Health Information Management I (1-8 cr.) This course is designed to provide professional practice experience in an approved clinical site under the direction of an HIA faculty member and an onsite clinical instructor. Students also receive didactic and practicum experience in the classroom. Emphasis on clinical science, health information management, business administration and information systems.

HIA-M 444 Professional Practicum in Health Information Management II (1-8 cr.) P: M443 This course is a continuation of HIA-M 443 and includes professionally supervised experience in an approved clinical site as well as practicum experience in the classroom.

HIA-M 445 Medicine and the Law (1-2 cr.) Presentation of concepts of law in medical, and/or health related areas as applied to the physician, hospital, health institutions, health information and individual health workers.

HIA-M 450 Medical Science for Health Information II (3 cr.) P: M350. This course is a continuation of M350. Course will cover pathophysiology and pharmacology associated with the body systems.

HIA-M 455 CPT Coding (3 cr.) P: M355. Focus on Current Procedural Terminology coding. Sequence of procedures as they relate to correct coding guidelines. Study of Health Care Common Procedure Coding System (HCPCS) will also be included.
HIA-M 456 Clinical in Health Information Administration (1 cr.) P: M355 This course is a laboratory for HIA-M 455 that provides hands-on experience in assigning CPT codes. Actual patient records are used for coding practice which focuses on correct code assignment and sequencing of codes to follow ethical coding guidelines. Students will also gain hands-on experience with electronic health records and coding software used in the HIM industry.

HIA-M 457 Practicum in Medical Coding (4 cr.) Course is designed for students completing the Certificate in Medical Coding. Students will participate in a supervised laboratory practicum focusing on the coding of complex medical records using both the ICD and CPT coding systems. Onsite observations related to coding function in approved clinical settings are included in the course content.

HIA-M 461 Release of Health Care Information (1 cr.) This course will outline the requirements associated with confidentiality and privacy of health information. This course will focus on Health Insurance Portability and Accountability Act (HIPAA) code sets and transactions privacy.

HIA-M 462 Health Care Quality Improvement (2 cr.) This course will identify quality/performance improvement methods and techniques for health care professionals. Interpretation of data appropriate to user needs and presentation of information will also be covered.

HIA-M 470 Health Care Reimbursement Systems (3 cr.) P: M355,M455 This course will present data elements that apply to prospective payment systems. It will allow the student to gain the knowledge of correct reimbursement systems and to identify issues and patient types in meeting medical necessity guidelines.

HIA-M 490 Directed Study (1 cr.) This course will reinforce the concepts taught throughout the semester in an independent study approach in order to review for the certification examination.

HIA-M 499 Capstone Experience (3 cr.) This final project will allow the student to synthesize all of the information learned throughout the professional program. Written research projects and oral presentations will test the student's integrated knowledge and abilities across the field.

Human-Centered Computing
INFO-B 505 Informatics Project Management (3 cr.) This course introduces standard project management concepts and capabilities, in the context of innovative and creative knowledge-work projects involving computers. These are targeted as a common ground for all members of a successful team, not only for the Project Manager. Through lecture, reading, discussion, computer lab exercises, and projects, students will become more proficient with basic project management terminology, techniques and technologies. Students will apply industry-standard project management in a framework of productive team dynamics, consumer frame of reference, and organizational change and optionally continuing to professional certification.

INFO-G 599 Thesis Research (0 cr.) Master's students who have enrolled in 30 or more hours of graduate course work applicable to the degree and who have completed all other requirements of the degree except the thesis of final project of performance may enroll in G599. Requires section authorization.

INFO-H 500 Fundamental Comp Concepts Info (3 cr.) An introduction to fundamental principles of computer concepts for Informatics study, including an overview of computer architecture, computer algorithms, fundamentals of operating systems, data structure, file organization and database concepts.

INFO-H 501 Introduction to Informatics (3 cr.) Basic information representation and processing; searching and organization; evaluation and analysis of information. Internet-based information access tools; ethics and economics of information sharing.

INFO-H 502 Human-Centered Research Methods in Informatics (3 cr.) This course surveys a broad range of research methods employed in Informatics, exploring their meta-theoretical underpinnings and exemplifying their application to specific research questions. This course is intended for students in Informatics graduate programs, especially PhD students, who need a grounding in research methods.

INFO-H 503 Social Impact of Information Technologies (3 cr.) An overview of important social, legal, and ethical issues raised by information technology.

INFO-H 504 Social Dimensions of Science Informatics (3 cr.) Course will examine ethical, legal, and social issues surrounding contemporary research and practice in science informatics. Topics include the nature of science and technology, the ramifications of recent advances in science informatics, and relevant science policy and research ethics. General knowledge of science informatics is assumed.

INFO-H 506 Globalization and Information (3 cr.) Explores the processes that promote and impede movement of human action and informational activities to the most general levels, e.g., the level of the world as a whole. Surveys diverse theories of globalization to identify the best approaches for professional informatics career planning and making information globally accessible.

INFO-H 525 Organizational Informatics and Economics Security (3 cr.) Organizational process embed implicit and explicit decisions and information control. Security technologies and implementations make explicit organizational choices that determine individual autonomy within an organization. Security implementations allocate risk, determine authority over processes, make explicit relationships in overlapping hierarchies, and determine trust extended to organizational participants.

INFO-H 534 Seminar in Human-Computer Interaction (1-3 cr.) Topics vary yearly and include the following: information visualization, immersive technologies, designing hypermedia for educational applications, user-centered design techniques and tools, formal methods and cognitive modeling in HCI.

INFO-H 536 Foundational Mathematics of Cybersecurity (3 cr.) Students will learn mathematical tools necessary to understand modern cyber security. The course will cover introductory mathematical material from a number of disparate fields, including probability
theory, computational theory, complexity theory, group theory, and information theory.

**INFO-H 537 Legal and Social Informatics of Security (3 cr.)** This is a case-based course on privacy and security in social contexts. Cases will particularly address the specific designs of technologies (e.g., P3P, PICS) and discuss how different technically feasible design choices would result in distinct regulatory regimes, business strategies, or support different forms of social interaction. This course will focus on specific security and privacy technologies as socio-technical systems.

**INFO-H 538 Introduction to Cryptography (3 cr.)** Introduction to the foundational primitives of cryptography and implementations. A primary goal of this course will be to understand the security definitions for each primitive and how they are used in cryptographic protocols. The ethics of insecure or on-the-fly protocol design will be discussed.

**INFO-H 539 Cryptographic Protocols (3 cr.)** The class teaches a basic understanding of computer security by looking at how things go wrong, and how people abuse the system. The focus of the class is on how computer systems are attacked, and once this is understood it is possible to propose ways to make the system secure.

**INFO-H 540 Data Mining for Security (3 cr.)** The objective of this course is to provide an understanding of the impact of data mining in security with a particular focus on intrusion detection. There will be an introduction to data mining where data mining techniques including association rules, clustering and classification are described. Security basics will be presented, focusing on topics such as authentication and access control that are relevant to data mining. This seminar course will explore recent research work in this area and intrusion detection.

**INFO-H 541 Interaction Design Practice (3 cr.)** Human-computer interaction design (HCID) describes the way a person or group accomplishes tasks with a computer: what the individual or group does and how the computer responds; what the computer does and how the individual or group responds. Sometimes known as ‘interface design,’ HCID becomes increasingly important as computing intelligence and connectivity spread ubiquitously to home, work, and play environments. This course will be organized around a collection of readings and several design projects concerned with applying human-computer interaction principles to the design, selection, and evaluation of interactive systems.

**INFO-H 543 Interaction Design Methods (3 cr.)** Students will learn basic concepts and methods for usability studies and evaluation of interactive systems as well as apply those methods to actual system design evaluations. This course is not only for understanding the basics and traditional approaches in this area, but also for exploring new ways of evaluating the usability of state-of-the-art technology-based systems such as systems in ubiquitous computing, CSCW, tangible and social computing areas.

**INFO-H 550 Legal and Business Issues in Informatics (3 cr.)** This course is intended for students who are interested in starting their own company or who anticipate joining a start-up company. It will provide students with a solid foundation on a variety of legal and business matters that need to be considered when starting a new company, such as selecting a business structure (sole proprietorship, partnership, corporation, etc.), financing and credit, drafting business plans, preparing appropriate paperwork such as articles of incorporation and bylaws, tax implications, marketing and public relations, bankruptcy and other pitfalls, insurance, planning for growth, resources for entrepreneurs, contracts, real and personal property, shareholder and governance issues and working with professionals such as attorneys, accountants and insurance agents.

**INFO-H 554 Independent Study in Human-Computer Interaction (1-3 cr.)** Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit. Total credit for seminars and independent study courses may not exceed nine 9 hours.

**INFO-H 561 Meaning and Form in HCI (3 cr.)** As a continuation of HCI1 (H541), students will learn methodologies and principles for two types of core activities in human-computer interaction design: a) requirements analysis, contextual inquiry and ethnography as applied to the design of interactive systems in the social context? b) conceptual design for the modeling of the interactive structure of web, hypermedia and software applications. Weekly readings on the text books will be integrated with academic and professional articles and online media.

**INFO-H 563 Psychology of Human Computer Interaction (3 cr.)** Covers the psychological and behavioral science of human computer interaction, including cognitive architecture, memory, problem-solving, mental models, perception, action, and language. Emphasis is placed on developing an understanding of the interaction between human and machine systems and how these processes impact the design and testing of interactive technologies.

**INFO-H 564 Prototyping for Interactive Systems (3 cr.)** The course covers methodologies for designing and prototyping graphic user interfaces, including rapid (paper) and dynamic (interactive) prototypes. Principles of design research and visual communication are discussed in the context of interaction design, cognition and user behavior, as well as usability testing techniques for concept validation.

**INFO-H 590 Topics in Informatics (3 cr.)** Variable topic. Emphasis is on new developments and research in informatics. Can be repeated with different topics, subject to approval of the Dean.

**INFO-H 600 Professionalism and Pedagogy in Informatics (3 cr.)** Course will introduce students to topics and skills necessary for entering careers in industry or the academy. Topics covered will include career planning, curriculum development, effective teaching, research ethics, scholarly and trade publishing, grantsmanship, and intellectual property consideration.

**INFO-H 604 Human Computer Interaction Design Theory (3 cr.)** The course will explore, analyze, and criticize underlying assumptions and the rational rationale behind some of the most influential theoretical attempts in HC and related fields. The purpose of the course is to make students aware of how theories can influence
practice and to develop critical thinking around the role, purpose, and function of theories.

INFO-H 605 Social Foundations of Informatics (3 cr.)
Topics include the economics of information businesses and information societies, legal and regulatory factors that shape information and information technology use, the relationship between organization cultures and their use of information and information technology, and ownership of intellectual property.

INFO-H 611 Mathematical and Logical Foundations of Informatics (3 cr.) An introduction to mathematical methods for information modeling, analysis, and manipulation. The topics include proof methods in mathematics, models or computation, counting techniques and discrete probability, optimization, statistical inference and core advanced topics that include, but are not limited to, Markov chains and random walks, random graphs, and Fourier analysis.

INFO-H 624 Advanced Seminar I – Human-Computer Interaction (3 cr.) P: Advanced graduate standing or consent of instructor. Introduces students to major historical, contemporary, and emerging theories, methods, techniques, technologies, and applications in the field of human-computer interaction. Students will explore relevant and influential research, results, and application. Students will design an independent research program in relation to their individual research fields and personal interests.

INFO-H 628 Advanced Seminar I in Complex Systems (3 cr.) Introduces students to major historical contemporary and emerging theories, methods, and techniques in the field of complex systems. Students will examine and explore relevant and influential research, results and applications. Students will develop an understanding of leading research approaches and paradigms, and will design an independent research program in relation to their individual research fields and personal interests. The course will focus on the theory of complex systems, systems science and artificial life.

INFO-H 634 Advanced Seminar II – Human Computer Interaction (3 cr.) P: Advanced graduate standing or consent of instructor. Introduces students to major historical, contemporary, and emerging theories, methods, techniques, technologies, and applications in the field of human-computer interaction. Students will explore relevant and influential research, results, and applications. Students will develop an understanding of leading research approaches and paradigms, and will design an independent research program in relation to their individual research fields and personal interests.

INFO-H 628 Advanced Seminar II in Complex Systems (3 cr.) Introduces students to major historical contemporary and emerging theories, methods, and techniques in the field of complex systems. Students will examine and explore relevant and influential research, results and applications. Students will develop an understanding of leading research approaches and paradigms, and will design an independent research program in relation to their individual research fields and personal interests. The course will be an exposition of "the science at the edge" and the forefront of research to complex systems.

INFO-H 651 The Ethnography of Informatics (3 cr.)
Introduces ethnography as a social science methodology and way of knowing with which to study information and its social contexts. Places ethnography in relation to other research methodologies relevant to the production of the informatics knowledge base. Trains students in the use of a broad range of ethnographic techniques relevant to the study of automated information technology in use. Designed to be open to students from other programs with sufficient methodological and substantive background.

INFO-H 680 Human-Computer Interaction Professional Practice I (3 cr.) P: INFO H541, H561, H543, H563, H564 This course represents Part One of a two-part course series, which fulfills the final HCI MS project requirement. Part One should showcase the cumulative knowledge of the student in the areas of product design and development. Students will explore relevant and applied research concepts, while considering various HCI design approaches. Final outcomes will include the completion of the first half of the final project, i.e., the completion of a final product.

INFO-H 681 Human Computer Interaction Professional Practice II (3 cr.) P: INFO H680 This course represents part two of a two-part course series, which fulfills the final HCI MS project requirement. The project will showcase the accumulative knowledge of the student in the areas of product assessment and documentation. Final outcomes will include the completion of the second half of the final project, i.e., product testing and analysis and writing of the paper.

INFO-H 690 Topics in Informatics (3 cr.) Variable topic. Emphasis on new developments and research in informatics. Course is intended for Ph.D. students in the School of Informatics. Can be repeated with different topics, subject to approval of the dean.

INFO-H 694 Thesis/Project in Human-Computer Interaction (1-6 cr.) The student prepares and presents a thesis or project in an area of human-computer interaction. The product is substantial, typically multi-chapter paper, or a carefully designed and evaluated application, based on well-planned research or scholarly project. Details are worked out between the student and sponsoring faculty member.

INFO-H 698 Research in Informatics (1-12 cr.)
Research under the direction of a member of the graduate faculty that is not dissertation related. Can be repeated for credit for a total of 30 credit hours.

INFO-H 699 Independent Study in Informatics (1-3 cr.) Independent readings and research for Ph.D. students under the direction of a faculty member, culminating in a written report. May be repeated for a maximum of 12 credit hours.

INFO-H 790 Informatics Research Rotation (3 cr.) Work with faculty, investigate research opportunities. Can be repeated for a total of 6 credit hours.

INFO-H 890 Thesis Readings and Research (1-12 cr.) Research under the direction of a member of the graduate faculty leading to a Ph.D. dissertation. Can be repeated for credit for a total of 30 credit hours.

INFO-I 575 Informatics Research Design (3 cr.)
Full spectrum of research concepts, designs, and
methodologies used in informatics research, from quantitative to qualitative research; from deterministic, hypothesis-driven experimental designs to a posteriori discovery through data mining. Philosophical foundations to practical applications. Provides the conceptual framework in which the informatics graduate student may develop their own research agenda.

Informatics
INFO-I 100 First Year Experience (1 cr.)
This course introduces specific survival skills for success in college and beyond, while reconciling personal learning skills with instructor-based teaching styles. Master the art of inquiry and elevate your sense of integrity while sharpening your personal edge by exploring critical thinking, project management and current/future job market trends. Required by all informatics and media arts and science majors.

INFO-I 101 Introduction to Informatics (4 cr.)
Problem solving with information technology; introductions to information representation, relational databases, system design, propositional logic, cutting-edge technologies: CPU, operation systems, networks, laboratory emphasizing information technology including web page design, word processing, databases, using tools available on campus.

INFO-I 112 Basic Tools of Informatics - Programming and Database Concepts (3 cr.)
Introduction to programming and database design concepts. Emphasis on problem-solving and information gathering techniques. The lecture will discuss general concepts and syntax. The lab will focus on the use of software, including a programming language, modifying and accessing data using visual tools, and building database applications using forms and development tools.

INFO-I 130 Introduction to Cybersecurity (1 cr.)
P: I101 C: I110 This course introduces students to Cybersecurity. The course will primarily focus on introduction to three core areas (technical aspects of security, organizational aspects of security, and legal aspects of security). Through examples of security problems in real life, this course will illuminate fundamental ideas and concepts of information security.

INFO-I 201 Mathematical Foundations of Informatics (4 cr.)
An introduction to the suite of mathematical and logical tools used in information sciences, including finite mathematics, automata and computability theory, elementary probability and statistics, and basics of classical information theory. Cross listed with COGS Q250. Credit given for either INFO I201 or COGS Q250.

INFO-I 202 Social Informatics (3 cr.)
Introduction to key social research perspectives and literatures on the use of information and communication technologies. Discusses current topics such as information ethics, relevant legal frameworks, popular and controversial uses of technology (e.g. peer-to-peer file sharing), digital divides, etc. Outlines research methodologies for social informatics.

INFO-I 210 Information Infrastructure I (4 cr.)
The software architecture of information systems. Basic concepts of systems and applications programming.

INFO-I 211 Information Infrastructure II (4 cr.)
P: INFO I210 The systems architecture of distributed applications. Advanced programming, including an introduction to the programming of graphical systems.

INFO-I 230 Analytical Foundations of Security (3 cr.)
P: I130 This course will allow students to re-evaluate and conceptualize material learned in discrete courses to consider the topics from the perspective of security. For example, computer system basics such as hardware (CPU, memory, ...) and software are reconsidered from the perspective of how their interactions create vulnerabilities. Vulnerabilities that combine standard hardware and software configurations will be examined, as these illuminate both security and computer networks. Operating systems and file systems are examined from the perspective of access control, permissions and availability of system services, etc.

INFO-I 231 Introduction to the Mathematics of Cybersecurity (3 cr.)
P: I130 C: I130 Introduces the basic mathematical tools used in modern cybersecurity. Covers mathematical material from a number of disparate fields, including probability theory, analysis of algorithms, complexity theory, number theory, and group theory.

INFO-I 270 Introduction to Human-Computer Interaction Principles and Practices (3 cr.)
Students learn the fundamental principles and practices of human-computer interaction (HCI) and evaluation. Specific focus is given to the introductory knowledge of HCI methods, tools, and techniques for designing and evaluating user interfaces through the use of low and high fidelity prototypes for the Web and software.

INFO-I 275 Introduction to Human-Computer Interaction Theory (3 cr.)
Students will learn the fundamental theories of human-computer interaction (HCI) and user-centered design. This course is both a survey of HCI research and an introduction to the psychological, behavioral, and other social science knowledge and techniques relevant to the design of interactive and ubiquitous computing systems.

INFO-I 300 Human-Computer Interaction (3 cr.)
P: INFO I270 An intermediate course that teaches students how to assess the usability of software through quantitative and qualitative methods, including conducting task analyses, usability studies, heuristic inspections, interviews, surveys, and focus groups. The course also introduces students to the tool and techniques for designing and testing user interfaces based on a human-centered methodology.

INFO-I 303 Organizational Informatics (3 cr.)
Examines the various needs, uses, and consequences of information in organizational contexts. Topics include organizational types and characteristics, functional areas and business processes, information-based products and services, the use of and redefining role of information technology, the changing character of work life and organizational practices, sociotechnical structures, and the rise and transformation of information-based industries. Credit given for either INFO I303 or SPEA V369.

INFO-I 305 Introduction to Research in Informatics (3 cr.)
P: Sophomore standing This course presents a broad overview of research philosophy, designs and methods. Its focus is on social science research methods and the content is specifically tailored to reflect the rapidly emerging field of informatics. The course will include major
methods that are the core of contemporary approaches to research in informatics.

**INFO-I 308 Information Representation (3 cr.)** The basic structure of information representation in digital information systems. It covers three modules: web development, relational databases, and XML technologies. Through this course, students are able to develop web pages that are able to interact with the backend servers; represent relational databases in the ER model, query the data using the formal query language SQL; and use XML technologies to store and display data.

**INFO-I 310 Multimedia Arts and Technology (3 cr.)** This course studies how the paradigm shift to a digital world will affect humanity. The course will consider the evolution of media arts and its underlying principles of communications. Students will study application development paradigms in current practice. Readings, lectures, class discussions, and research papers.

**INFO-I 320 Distributed Systems and Collaborative Computing (3 cr.)** P: INFO I211 An introductory treatment of distributed systems and programming. Topics range from the distributed and object models of computation to advanced concepts, such as remote method invocations, object brokers, object services, open systems, and future trends for distributed information systems.

**INFO-I 330 Legal and Social Informatics of Security (3 cr.)** This course will examine that set of ethical and legal problems most tightly bound to the issues of information control. The interaction and technology changes, but the core issues have remained: privacy; intellectual property; Internet law; concepts of jurisdiction; speech anonymity versus accountability; and ethical decision-making in the network environment.

**INFO-I 350 Foundations in Legal Informatics (3 cr.)** This course examines the basic concepts of the design, evaluation and use of technology in the study and practice of law. The course provides an overview of the application of a variety of emerging informatics and new media technologies to the field of law. Will cover technology for law office management, legal research, litigation support, document management, imaging and animations, case management, and electronic court filing.

**INFO-I 391 Internship in Informatics Professional Practice (1-3 cr.)** P: Approval of the dean and completion of 100- and 200-level requirements in informatics. Students gain professional work experience in an industry or research organization setting, using skills and knowledge acquired in informatics course work. May be repeated for a maximum of three credit hours.

**INFO-I 399 Current Topics in Informatics (1-3 cr.)** Variable topic. Emphasis is on new developments and research in informatics. Can be repeated twice with different topic.

**INFO-I 400 Topics in Informatics (1-3 cr.)** P: at least junior standing, or permission of instructor. Variable topic. Emphasis is on new developments and research in informatics. Can be repeated twice for credit when topics vary, subject to approval of the dean.

**INFO-I 402 Informatics Project Management (3 cr.)** P: Sophomore standing This course will focus on project management in an Informatics setting. Students will become conversant in the tools and techniques of project management, such as project selection methods, work breakdown structures, network diagrams, critical path analysis, critical chain scheduling, cost estimates, earned value management, motivation theory and team building.

**INFO-I 410 Electronic Discovery (3 cr.)** P: INFO I211 This course will focus on the legal, ethical, financial, logistical, procedural and technological considerations of electronic discovery and its implications for lawyers and their clients. It will highlight recently revised federal and state rules, new state and federal legislation and recent court cases that impact electronic discovery policies and processes. We will also consider electronic discovery from the point of view of a corporation that has to prepare for – and then respond to – requests for the production of digital evidence.

**INFO-I 421 Applications of Data Mining (3 cr.)** P: INFO I211 This course explores the use of data mining techniques in different settings, including business and scientific domains. The emphasis will be on using techniques, instead of developing new techniques or algorithms. Students will select, prepare, visualize, analyze, and present data that leads to the discovery of novel and usable information.

**INFO-I 425 Applying Web Services in Information Systems (3 cr.)** P: INFO I211 and INFO I308 An extensive survey of network security. Covers threats to information confidentiality, integrity, and availability in different Internet layers, and defense mechanisms which control these threats. Also provides a necessary foundation on network security, such as cryptographic primitives/protocols, authentication, authorization, and access control technologies. Hands-on experiences through programming assignments and course projects.

**INFO-I 430 Security for Networked Systems (3 cr.)** P: INFO I211 and INFO I308 This course examines how cloud computing and service-oriented architecture contribute to solutions for Informatics problems in areas such as business, health care, and life sciences. Students will develop an understanding of why, when, and how organizations utilize Web services to manage data, as well as the skills to design, implement, and deploy Web services applications.

**INFO-I 433 Protocol Design and Analysis (3 cr.)** Covers the fundamentals of computer security by looking at how things can go wrong, how people can abuse the system, and ways to make the system secure. Students will gain a basic overview of existing security problems and be introduced to methods for addressing such problems. Should be taken by anyone designing, selecting, or using applications in which security or privacy plays a role.

**INFO-I 441 Interaction Design Practice (3 cr.)** Human-computer interaction design (HCID) describes the way a person or group accomplishes tasks with a computer - what the individual or group does and how the computer responds; what the computer does and how the individual or group responds. This course will be organized a collection of readings and three design projects applying human-computer interaction principles to the design, selection, and evaluation of interactive systems.

**INFO-I 445 Competitive Intelligence for Informatics I (3 cr.)** This course will focus on the basic principles, techniques and methods of competitive analysis,
the types of competitive analysis systems and their applications, traditional and new sources of information about competitors and industries, the nature of business information and its lifecycle, the ethical issues of competitive analysis and the application of competitive intelligence to real-world scenarios.

INFO-I 453 Computer and Information Ethics (3 cr.) P: Sophomore standing Ethical and professionalization issues that arise in the context of designing and using networked information technologies and information resources. Examines frameworks for making ethical decisions, emergent technologies and their ethical implications, information/computer professionalism. Topics include privacy, intellectual property, cybercrime, games, social justice, and codes of professional ethics.

INFO-I 465 Informatics for Social Change (3 cr.) This course focuses on the theory and practice of service learning at IUPUI. Students will apply the knowledge of their expertise area in a service project for the local or global community. Projects will be completed through students’ current and developing new media production, information technology, and client-based research skills.

INFO-I 470 Litigation Support Systems and Courtroom Presentations (3 cr.) Provide students with an opportunity to use specialized software that is available for organizing, managing, retrieving, and presenting documents and evidence in a legal matter. Students will gain hands-on experience with software tools and learn what is effective and allowable from a technical, legal and ethical standpoint.

INFO-I 475 Informatics in Sports (3 cr.) Technology applications are changing the sports world in biomechanics, sports advancement and injury prevention, equipment, entertainment, gaming, and journalism. The approach of this course is to delineate what digital technologies are progressing the sporting field most and changing the way we view athletics.

INFO-I 480 Experience Design and Evaluation of Ubiquitous Computing (3 cr.) The course focuses on ubiquitous computing and related interface/system design, and user-experience issues. Applications include interactive systems which support natural/gesture/touch-based interactions on devices such as mobile, extra-small-and-large displays, and other non-traditional pervasive technologies. Projects include interaction and evaluative techniques: field observation, contextual inquiry, ethnography, survey/interviews, and cognitive walkthrough.

INFO-I 490 Internship in Informatics Professional Practice (3-6 cr.) P: approval of dean and completion of 100- and 200- level requirements in informatics Students gain professional work experience in an industry or research organization setting, using skills and knowledge acquired in informatics course work.

INFO-I 491 Capstone Project Internship (1-6 cr.) P: Consent of instructor Students culminate their course studies through practical application of concepts and practices working in industry. Course requires prior authorization and approval of internship through the Career Services Office. Required coursework is completed via Oncourse.

INFO-I 492 Senior Thesis (3 cr.) P: Consent of instructor The senior student prepares and presents a thesis: a substantial, typically multi-chapter, paper based on a well-planned research or scholarly project, as determined by the student and a sponsoring faculty member.

INFO-I 493 Senior Thesis (3 cr.) P: Consent of instructor The senior student prepares and presents a thesis: a substantial, typically multichapter paper based on a well-planned research or scholarly project, as determined by the student and a sponsoring faculty member.

INFO-I 494 Design and Development of an Information System (3 cr.) P: Consent of instructor System design and development present both technical and managerial problems with which students will be familiar from their undergraduate course work. This course puts these lessons into practice as students work in teams to develop an information system. Examples of course projects include design and development of a database for a business or academic application, preparation and presentation of an interactive media performance or exhibit, or design and implementation of a simulated environment (virtual reality).

INFO-I 495 Design and Development of an Information System (3 cr.) P: Consent of instructor System design and development present both technical and managerial problems with which students will be familiar from their undergraduate course work. This course puts these lessons into practice as students work in teams to develop an information system. Examples of course projects include design and development of a database for a business or academic application, preparation and presentation of an interactive media performance or exhibit, or design and implementation of a simulated environment (virtual reality).

INFO-I 499 Readings and Research in Informatics (1-3 cr.) P: consent of instructor and completion of 100- and 200- level requirements in informatics Independent readings and research related to a topic of special interest to the student. Written report required.

NEWM-N 221 Media Applications I (3 cr.) P: NEWM N101 or INFO I101 Introduces concepts and skills related to the design of interactive multimedia applications for the Web, the desktop, and mobile devices. Within the context of industry-standard application design tools, students use markup tags and scripting to create applications that emphasize graphics, animation, sounds, and interactivity.

NEWM-N 222 Media Applications II (3 cr.) P: NEWM N221 Introduces intermediate concepts and skills related to the design of interactive multimedia applications for the Web, the desktop, and mobile devices. Within the context of industry-standard application design tools, students use information modeling, markup tags, and scripting to create applications that emphasize graphics, animation, sounds, and interactivity.

NEWM-N 299 Directed Study (2 cr.) This course applies design and visualization information towards the development of a comprehensive portfolio and resume. The development of the portfolio and resume will provide students with a framework for display of personal growth and achievement. Students will develop a portfolio and resume to be used for future career opportunities.
INFO-Y 395 Career Development for Informatics Majors (1 cr.) Develops skills and knowledge that enable the student to successfully pursue the career search both at the time of graduation and later as the student progresses through their career. The course covers techniques and strategies which make the job search more efficient and effective.

Library and Information Science
Masters Level Courses

SLIS-S 501 Reference (3 cr.) P: or Concurrent S401. This course introduces students to the basic information sources and services among different types of libraries and information centers, including academic, public, special, and school media.

SLIS-S 502 Collection Development and Management (3 cr.) Collection Development and Management examines the principles and techniques that guide the development, management, and evaluation of library collections and the selection of materials in various types of libraries. The course provides students with experience in the major phases involved in starting and developing collections of print and non-print materials: the formulation of collection development plans, the selection of materials, and the evaluation and preservation of library collections. It enables students to recognize and respond to challenges and opportunities of special interest to collection developers including changes in the production and distribution of information resources, issues of access and ownership, intellectual freedom, copyright, and resource sharing.

SLIS-S 503 Organization and Representation of Knowledge and Information (3 cr.) Introduces students to various disciplines' approaches to the understanding, organization, representation (summarizing), and use of knowledge and information. This survey looks for commonality among the approaches taken in information science, cognitive psychology, semiotics, and artificial intelligence, among others. The goal is to identify criteria for evaluation and improvement of ways to organize and represent information for future retrieval. Information systems currently used in libraries and information centers will be studied as examples. Emphasis in the course is on concepts and ideas, with appropriate attention to terminology and technology.

SLIS-S 504 Cataloging (3 cr.) P: S401. Historical development and principles essential to the understanding of the conceptual foundations of providing bibliographic access and control of materials and information. Discussion and examples in the application of AACR2 will be presented to illustrate and reflect current practice. Emphasis is on monographic publications.

SLIS-S 505 Evaluation of Library Sources and Services (3 cr.) P: S502. Examines the applied evaluation of library resources and services, including collections, document delivery, technical services, reference services, and overall library performance. Emphasis is placed on the available methods and methodological issues. The checklist method, availability studies, document delivery tests, use studies, applied bibliometrics, and the use of automation are covered.

SLIS-S 506 Introduction to Research (3 cr.) P: S401, completion of 6 credit hours in SLIS (S501 and S502 recommended), or consent of instructor. Introduces the research process, including concepts, design, conduct, and evaluation. Examines the principles and characteristics of approaches and methodologies relevant to research in the field. Examples of data sources and introduction to methods of statistical description and analysis; ethical issues.

SLIS-S 511 Database Design (3 cr.) P: S401 or consent of instructor. Concerned with a comprehensive view of the processes involved in developing formal access to information from a user-centered point of view. Considers various database models (such as flat file, hierarchical, and relational), and hypertext (in terms of text, sound, numeric, image, and geographic data). Students will design and implement databases using several commercial database management systems.

SLIS-S 516 Human-Computer Interaction (3 cr.) Examines the human factors associated with information technology and seeks to provide students with knowledge of the variables likely to influence the perceived usability, and hence the acceptability, of any information technology. In so doing, it will enable students to progress further toward specialist work in the important field of human-computer interaction.

SLIS-S 517 Web Programming (3 cr.) The main focus of this course is to instruct students to develop and implement dynamic and interactive web applications. In order to do so, students will learn the basics of an open source programming language both through lectures and hands-on exercises in the lab.

SLIS-S 519 Evaluation of Information Systems (3 cr.) P: S401. Theoretical and practical exploration of the issues surrounding contemporary information systems. A specific focus will be on evaluating information systems from the user perspective. This evaluation approach will cut across disciplinary frameworks: behavioral, cognitive, and social sciences. The approach will also touch on multiple research methods: online surveys, sense-making, critical incident, and network analysis.

SLIS-S 521 Humanities Information (3 cr.) P: S501 or consent of instructor. Introduction to information sources and services in the disciplines of performing arts, music, fine arts, literature, language, philosophy, and religion. In addition, the course addresses information needs and behavior patterns of users seeking these types of information.

SLIS-S 522 Social Sciences Information (3 cr.) P: S401 and S501 or consent of instructor. Study of the core information tools in the fields of anthropology, economics, history, political science, psychology, and sociology. Includes key bibliographic databases and electronic network tools. Evaluation of research dealing with information channels in these fields.

SLIS-S 523 Science and Technology Information (3 cr.) P: S401 and S501. General materials, reference books, periodicals, government documents, nonbook media in the individual literature of individual disciplines; patents and report literature. Examination of production, publication, distribution, and forms of scientific and technical literature.

SLIS-S 524 Adult Readers Advisory (3 cr.) P: S501 and S502. A review and discussion of trends reflected in
subject content and use of book and nonbook materials for patrons in secondary school and public libraries in relation to changing young adult and adult needs and the role of libraries in meeting such needs.

**SLIS-S 525 Government Information (3 cr.)** P: S401 and S501. Survey of government information dissemination in all formats and at all levels of government. Consideration of government information policy. Primary emphasis given to U.S. government information but some consideration given to state and local publications in the United States, and those of international organizations.

**SLIS-S 526 Business Information (3 cr.)** P: S401 and S501 or consent of instructor. Introduction to basic business materials. Includes resources, research methods, current developments, automated systems, and databases.

**SLIS-S 532 Information Architecture for the Web (3 cr.)** P: S401. Focuses on website development. Students study information architecture as an approach for site organization and design, and learn about product management for complex web development tasks. In lab sessions, students work with markup languages and scripting and develop sites, typically for real clients, as well as local libraries.

**SLIS-S 533 Online Searching (3 cr.)** P: S401 or consent of instructor. Principles, methods, and techniques of advanced online information retrieval (IR). Characteristics of and search strategies for the use of bibliographic, referral, citation, fact, numeric, and full text databases and search systems. Considers standards, use of communications software, front-ends and micro-based IR systems, and creation of in-house databases.

**SLIS-S 541 Information Policy (3 cr.)** Data creation, publication, dissemination, and use occur in a complex social context. Legal and regulatory structures continue to evolve to control these processes. This course explores international and U.S. principles, laws, and regulations affecting the information industry. Focus varies with the topic; for example, copyright of electronic information sources or transborder data flow. May be repeated for credit when topic varies.

**SLIS-S 550 Perspectives on Librarianship (3 cr.)** Overview of the library as a social institution-historically, currently, and for the future-within social, economic, political, and cultural contexts. Focuses on the institution, the collections and formats, and the users to create an understanding of the role and importance of libraries. SS550 provides excellent opportunities to help students explore the library profession.

**SLIS-S 551 Library Management (3 cr.)** Management and administration of all types of libraries. Covers basics of organizational structure, planning, budget management, human resources issues and skills, and an understanding of the manager in the context of the organization.

**SLIS-S 552 Academic Library Management (3 cr.)** Management and administration of academic libraries, including specific material related to organization structure, planning, budget management, human resources issues and skills, and an understanding of the manager in the context of a higher education environment.

**SLIS-S 553 Public Library Management (3 cr.)** Management and administration of public libraries, including specific material related to organization structure, planning, budget management, human resources issues and skills, and an understanding of the manager in the context of a community environment.

**SLIS-S 554 Library Systems (3 cr.)** P: S401. Principles for the design, selection, implementation and management of automated systems of all types in libraries, including systems for technical services processing, reference and user services, and management. Focus is on present and future applications of technology in libraries, their technical features, and their implications for library services and management. When possible, some practical experience with a particular application will be provided.

**SLIS-S 556 Systems Analysis and Design (3 cr.)** P: computer or consent of instructor. This course introduces the basic concepts underlying systems analysis and design, focusing on contextual inquiry/design and data modeling, as well as the application of those analysis techniques in the analysis and design of organizational information systems.

**SLIS-S 571 Materials for Youth (3 cr.)** Evaluation and use of books, magazines, recordings, films, radio and television broadcasts, and other sources of information and recreation.

**SLIS-S 572 Youth Services (3 cr.)** P: S571 or consent of instructor. This course emphasizes the history, philosophy, and description of children and young adult library services. It takes a holistic look at the role of the youth services librarian from planning and evaluation to specific services and programs, and examines the current and future outlook for this type of librarianship. Emphasis is on the public library, but cooperation with appropriate services and programs, such as school media centers, is also discussed.

**SLIS-S 573 Education of Information Users (3 cr.)** P: S401, S501 or S516. Introduces students to the roles of librarians in adult education in university and college libraries and in public libraries. The course explores information literacy, library instructional models, education and training theories, and practical approaches for optimizing learning opportunities in library-based settings. Information literacy standards from the Association of College and Research Libraries (ACRL) and others are explored and applied to instructional design and practice. S573 also introduces students to outcomes-based planning and evaluation, a process for planning library-based educational programs with outcomes, or specific learning objectives in-mind.

**SLIS-S 574 Information Inquiry for School Teachers (3 cr.)** Information Inquiry for School Teachers (3 cr.; formerly L551) This course is intended to be an opportunity for teachers and future teachers (including school library media specialists as teachers) to practice methods in critically thinking about information/media, and to use the inquiry process as a means to teach their students to be critical reviewers and communicators as well. Application of national and state standards for information literacy K - 12. Offered over the Internet.
SLIS-S 580 History of Libraries (3 cr.) Development of libraries and information service from earliest times to the present, with emphasis on the library in relation to social, economic, cultural, and political trends.

SLIS-S 581 Archives and Records Management (3 cr.) Introduces basic theories, methods, and significant problems in archives and records management. The course also discusses how archivists are responding to the challenge of managing and preserving electronic records.

SLIS-S 582 Preservation (3 cr.) Examines causes of library and archival materials deterioration. Develops conceptual framework and management perspective for preservation programs using technical standards, program development tools, scientific and administrative research reports, and advocacy literature. Explores the new information technologies and media as both preservation tools and challenges.

SLIS-S 601 Directed Readings (1-4 cr.) P: Consent of instructor. Readings and study in any area of library or information science having an extensive literature. A student may enroll for this course twice in the same semester under different instructors. Normally S601 is completed under the direction of a full-time faculty member. Readings done under S601 shall not duplicate the content of any course now in the curriculum of the School of Library and Information Science. Proposal Form due by March 15th.

SLIS-S 602 Directed Research (1-3 cr.) P: Proposal form and consent of instructor and 15 SLIS graduate credit hours completed including S505 or S506. Individual research in a problem in the field of library and information science.

SLIS-S 603 Workshop in Library and Information Science (1-3 cr.) Group study of specific problems in the library and information field. Generally includes a hands-on element. No more than 6 hours of S603 credit may be used toward the requirements for any SLIS degree.

SLIS-S 604 Topics in Library and Information Science (1-4 cr.) Study of specific topics in librarianship and preservation. May be repeated for credit when topic varies. Same course number used for different courses.

SLIS-S 605 Internship in Library and Information Science (2-6 cr.) P: Permission of faculty advisor. Graded S/F. Supervised internship in an information management environment. Professionals in library and information management mentor each graduate student. Sixty on-site hours must be completed for each credit earned. Students document their experiences through journals, abstracts of related publications, and a final presentation. Normally, at least 18 credits must be completed before enrollment*. Guidelines and placement listings are available on the SLIS website.

SLIS-S 621 Audio and Video Sources (3 cr.) P: S401 concurrent or consent of instructor. User-focused approach to decision making in the digital audio and video information environment. Emphasizes collection development in support of user services, including access to remote collections and evaluation of multimedia materials and delivery mechanisms, and issues related to emerging technologies. Scope includes adult and young adult audiences.

SLIS-S 622 Resources and Services for People with Disabilities (3 cr.) Access to information is essential for sustained independence of people with disabilities. This course studies materials, services, and assistive technologies to support this access.

SLIS-S 623 Genealogy and Local History (3 cr.) P: S401, S501, & S502. This course is designed to focus on two specific collection areas: Genealogy Resources and Indiana Resources. Students will work on developing collection policies creating collections with limited funding, and evaluating existing special collections. The class will also look at the pros and cons of several issues (staffing issues, volunteers, integrated collections, circulating/non-circulating, limited resources, material types).

SLIS-S 631 Advanced Cataloging (3 cr.) P: S504. Provides extensive background in description and access for electronic and non-book resources.

SLIS-S 632 Technical Services (3 cr.) C: S553, S551, S552 or consent of instructor Principles of organization and function of library technical services, including acquisition, cataloging, serials, circulation. Special emphasis on research and development in library systems and technology. Includes file organization, documentation system development, analysis, and evaluation for manual, mechanical, and automated applications.

SLIS-S 640 Seminar in Intellectual Freedom (3 cr.) P: 9 hours of SLIS graduate credit or permission of instructor. Beginning with a history of and alternative philosophical justifications for censorship, the student is introduced to constraints, obligations, and problems relating to intellectual freedom.

SLIS-S 644 Consumer Health Informatics (3 cr.) P: S401, S501 or consent of instructor. This is a consumer health informatics course in which students will learn about how technologies are used to deliver healthcare to the public.

SLIS-S 650 Library Philanthropy (3 cr.) Introduces the role of private giving in support of libraries. Examines personal and corporate philanthropy and their applicability in libraries and information centers.

SLIS-S 652 Digital Libraries (3 cr.) This course introduces digital libraries — networked information servers that provide access to multimedia data for local and remote users. Primary emphasis is on developing digital libraries, based on understanding tools for presentation and manipulation of multimedia as well as analysis of user needs.

SLIS-S 653 Health Science Librarianship (3 cr.) P: S401, S501 or consent of instructor. Explores the roles of health sciences libraries, librarianship and informationists in academia and hospital libraries, health information technology and information services environments, and in research and administrative teams. This course provides an introduction to the healthcare industry, health sciences schools and education (medicine, nursing, dentistry, public health, pharmacy, allied health and others), and the culture of...
healthcare in the United States. Student gain extensive experience with popular reference resources, and searching MEDLINE, PubMed, and specialty bibliographic databases in the health sciences. Students will increase their understanding of librarian and information roles in information literacy education, evidence based practice, health literacy, and other issues

SLIS-S 654 Law Librarianship (3 cr.) P: S501 or consent of instructor. An introduction to basic legal materials and law librarianship. Primary and secondary resources; indexes; digests and citators; specialized research methods; current developments in automated legal research. History of law libraries in the U.S., their organization and administration. The role of law librarians in law schools and law firms.

SLIS-S 671 School Media (3 cr.) P: S501, S571, and S574 or concurrent or consent of instructor. Establishes the professional teaching and administrative role of the certified school library media specialist in K-12 settings. Situations are examined that pertain specifically to policy development, budgeting, collection development, instructional design, support staff training, facility design, district supervision, and information networking within the modern school corporation. Students make site visits to leading school information centers, conferences, and media fairs.

SLIS-S 672 Seminar on Literature for Youth (3 cr.) P: S571 or consent of instructor. An advanced seminar, addresses such topics as: images of minority groups, societal problems (e.g., poverty and family patterns), or informational needs and materials including access and availability of print, nonprint, and computer resources. May be repeated for credit when topic varies.

SLIS-S 681 The Book 1450 to the Present (3 cr.) A survey of the book from 1450 to the present, with emphasis on the development of the book in the West. Focuses on the physical aspects of the book from the mid-fifteenth through the twentieth centuries, and on some of the many roles of the book in society during this period; also increases awareness of current scholarly trends in the history of the book.

Undergraduate Courses
SLIS-S 401 Computer-based Information Tools (3 cr.) Graded S/F. This skills-based course introduces basic applications that will be used throughout the student's course work and beyond. Students' experiences in this course should be seen as a basis for further skill development and learning throughout their careers. The course covers computing platforms, access tools, and management tools. Demonstration of skills will be by a mastery test or an assignment in each unit of the course. S401 does not count toward graduate degree requirements.

Media Arts and Science
Media Arts and Science
INFO-H 605 Social Foundations of Informatics (3 cr.) Topics include the economics of information businesses and information societies, legal and regulatory factors that shape information and information technology use, the relationship between organization cultures and their use of information and information technology, and ownership of intellectual property.

NEWM-N 500 Principles of Multimedia Technology (3 cr.) This course examines issues related to digital media communication in the context of e-commerce and the information industry, especially its impact on the cultural, economic, social, and ethical dimensions of local and global communities. Topics also include: usability, intellectual property, and a diversity of user markets for new media products.

NEWM-N 501 Foundations of Digital Arts Production (3 cr.) This course examines the production process and management of digital multimedia. Students investigate and produce projects by researching foundations in the use of digital video with special emphasis on production process of storytelling. Skills learned will include: project development and video production. Students will develop presentation skills through research papers.

NEWM-N 502 Digital Media Motion and Simulation Methods (3 cr.) Applications in animation/ simulation design and creation using computer desktop tools. Examines the fundamentals of three-dimensional animation through storyboards and planning, modeling, texturing, lighting, rendering, and composite techniques. Topics will include nurbs design development, texture mapping for realism and stylistic output, keyframe and path animation, and cinematography lighting techniques. Skills will be developed through design and modeling of individual or team multidisciplinary projects.

NEWM-N 503 Digital Media Application Design Processes (3 cr.) Presents the principles and fundamentals of design techniques using authoring tools on PC, Macintosh, and emerging computer platforms. Included are storyboarding, planning and organization of scripts, use of current technology, computers, video and digital arts equipment; computer-assisted design and project planner software tools and management of design team concepts.

NEWM-N 504 Advanced Interactive Design Applications (3 cr.) Incorporates extensive analysis and use of computer and multimedia authoring tools intended for character simulation design. The course will study the concepts of physics-based bipedal movement in relation to gravity, balance, anticipation, potential energy, personality constructs, and locomotion. Assessment modeling for character depiction and animation will be planned and storyboarded. Other topics include more advanced facets of computer animation including paint tube modeling, layered texture mapping, and track and block animation for cyclical actions.

NEWM-N 505 Internship in Media Arts and Technology (3 cr.) An internship program for students to work with and learn from experts in media (digital arts) technology fields who are developing and using new applications in commercial and educational settings. Requirements for interns include the development of a technology project proposal; interview, resume, and project presentation; on-site intern residency; project report; oral and media presentation of project outcomes.
NEWM-N 506 Media Arts Project or Thesis (1-6 cr.)
Students prepare a thesis or project that includes supporting documentation, as well as a final public defense. In either case, students are required to prepare a proposal that is approved by their advisor or committee chair before beginning their research.

NEWM-N 510 Web Database Concepts (3 cr.)
Addresses diverse issues arising when designing World Wide Web interface. Basic database concepts will be presented but the course will focus on discussion of interface issues specific to Web databases, technologies for linking databases to Web servers for delivery, discussion of various Web-database applications, case studies, and industry trends.

NEWM-N 553 Independent Study (1-3 cr.)
Research and/or production related to a particular theme or topic in media arts. Course topic, learning outcomes, and a plan of study must be developed by the student, with guidance from the instructor, prior to registration. Course can be repeated multiple times. Approval by the program advisor is required for registration.

NEWM-N 585 Seminars in Media Arts and Science (3 cr.)
Current trends, problems, best practices and developments in new media. Students pursue a special interest and share information and experience with the group. This course is an in-depth exploration of topics and issues at the forefront of new media. Seminar format with research papers and class discussion/presentations.

New Media

NEWM-N 100 Foundations of New Media (3 cr.)
An exploration of the characteristics of digital media, including interactivity, hypermedia, immersion, and storytelling. Includes an introduction to the practice, theory, and history of new media, from the viewpoint of technology, communication, and culture. There are readings, demonstrations, examples, hands-on projects, and written assignments.

NEWM-N 101 Multimedia Authoring Tools (3 cr.)
A hands-on introduction to some of the fundamental tools used in industry to produce interactive media-rich Web pages. Case studies of sites that incorporate text, sounds, graphics, animations, and interactivity. Other topics include the design, development, and deployment of a personal Web site.

NEWM-N 102 Digital Media Imagery (3 cr.)
A hands-on introduction to the basic tools used in industry for the creation, editing, manipulation, and uses of 2D raster and vector graphics. Other topics include the integration of imagery into a personal Web site.

NEWM-N 175 Digital Media I: Vector Imaging (3 cr.)
P: N101 Vector graphics are produced using traditional visualization (sketches) and computer methods. Color theory, geometric construction, perspective, and rendering techniques are utilized in vector-based graphic creation for use in new media applications.

NEWM-N 180 Digital Media II: Raster Imaging (3 cr.)
P: N101 Raster graphics are produced using traditional visualization (sketches) and computer methods. Topics will include image composition, realistic representation, digital imaging for new media, color mode and palette usage, material, and value representation.

NEWM-N 190 Topics in Interactive Media (1-3 cr.)
Special topics in interactive media, with a focus on exploring concepts at the forefront of media arts.

NEWM-N 199 Directed Study I (1 cr.)
This course introduces the new media student to the current job market and will provide instruction on the development of job promotional material. Students will explore various new media careers in business, education, entertainment, science, and other related fields.

NEWM-N 200 Desktop Tools for Digital Media (3 cr.)
A hands-on survey of the wide variety of tools used in creating multimedia animation, video, sound, and digital effects.

NEWM-N 201 Design Issues in Digital Media (3 cr.)
Exploration of the traditional principles of visual design, as expressed in digital design tools and applied to digital media. Topics include visual literacy, fundamental design elements and design principles, and their expression in various tools for digital design. Hands-on practice with applying design principles in several projects.

NEWM-N 202 Digital Storytelling (3 cr.)
P: N100 Examination of the principles of storytelling across a range of digital media formats, with attention to techniques for creating story-rich projects. Explores the role of agency, interactivity, story structure, and narrative, as well as the opportunities and challenges raised by emerging interactive and transmedia approaches to story-rich projects.

NEWM-N 204 Introduction to Interactive Media (3 cr.)
The creation of interactive multimedia products for multi-platform delivery. Topics include the multimedia production process, audience analysis, hardware and software requirements, authoring tools, scripting, content development, interface design, distribution, and development strategies. Concentration will be on real-world applications for interactive multimedia.

NEWM-N 210 Introduction to Digital Sound (3 cr.)
P: N101 An introduction to digital sound creation and editing. Topics will focus on analog sound techniques and equipment, analog-to-digital conversion, basic editing, formats and conversions, digital-to-analog conversion, and basic sound effect techniques for new media.

NEWM-N 215 Online Document Development (3 cr.)
P: N101, N102 Study of the creation, publication, and management of documents, images, and other media types on the Web. Topics include Web publishing, asset preparation, document types, contemporary content management systems and their use in the organization. Hands-on experience with contemporary systems for content management.

NEWM-N 221 Media Applications I (3 cr.)
P: NEWM N101 or INFO I101 Introduces concepts and skills related to the design of interactive multimedia applications for the Web, the desktop, and mobile devices. Within the context of industry-standard application design tools, students use markup tags and scripting to create applications that emphasize graphics, animation, sounds, and interactivity.

NEWM-N 222 Media Applications II (3 cr.)
P: N221 Introduces intermediate concepts and skills related to the design of interactive multimedia applications for the Web, the desktop, and mobile devices. Within the context of
industry-standard application design tools, students use information modeling, markup tags, and scripting to create applications that emphasize graphics, animation, sounds, and interactivity.

**NEWM-N 230 Introduction to Game Design and Development (3 cr.)** P: N221 Introduction to designing and developing games, examining the role that games play in daily life, and analyzing the impact of games in popular culture. Additional topics include world creation, game space design, programming 2D games, character and creature design, animation, and playability testing.

**NEWM-N 238 2D Animation (3 cr.)** P: N101 Introduction to traditional techniques for 2D animation, and their application in digital media. An exploration of the 12 principles of animation and how to use them to create effective animations.

**NEWM-N 241 Stop Motion Animation (3 cr.)** Through lecture and hands-on practice, this class studies the production techniques of stop action animation. Topics include the study of pioneers in the field, evolution from analog to digital techniques, and the building of sets and characters. Students will produce a series of short frame-by-frame digital animations.

**NEWM-N 243 Introduction to 3D (3 cr.)** An introduction to the concepts and production process of 3D graphics and animation. Students learn basic techniques and theories related to modeling, texturing, lighting, animation, and rendering. Students produce animated graphics and text within the context of various projects.

**NEWM-N 250 Team Building in Technology (3 cr.)** P: N202. Practical introduction to working in groups of three or more people. Topics include the interpersonal process, decision-making styles, the creative effort, problem-solving, conflict resolution, leadership, and assessment techniques.

**NEWM-N 253 Introduction to Digital Video (3 cr.)** Introduction to video production techniques for digital media. Hardware, software, and technique are explored through lecture and projects. All phases of video production are addressed, from pre-production through production to post-production with a focus on the digital media aspects.

**NEWM-N 255 Introduction to Digital Sound (3 cr.)** Introduction to role and function of sound in interactive media. Concepts, theory, and practice related to audio, including voice, music, and sound effects. Effective listening skills, and understanding how people listen and comprehend sound. Experience with tools and techniques for recording, editing, and reproduction.

**NEWM-N 256 Digital Composition (3 cr.)** P: N102 An introduction to digital cameras and the principles of photographic composition for multimedia. Topics include shot selection, framing, camera movements, and time-based effects, as well as the use of photographs in storytelling.

**NEWM-N 260 Scriptwriting (3 cr.)** P: N202 An introduction to writing for new media. Concentrating on developing ideas, concepts, plans and stories, students will generate scripts and analysis for numerous new media projects. Other topics covered include writing for scripts, grants, storyboards, and advertising and marketing plans.

**NEWM-N 261 Storyboarding for Multimedia (3 cr.)** P: N101, N102 Introduction to story and production planning through traditional and digital techniques. Topics include the development of roughs, storyboards, and animation as planning devices for digital storytelling and other new media products.

**NEWM-N 265 Sound Composition (3 cr.)** An introduction to digital sound creation and editing. Concentrating on sound effects, voiceover, and composition, students will generate sound for various new media projects. Other topics covered include recording, formatting, effects, editing, and conversion.

**NEWM-N 270 Visual Composition (3 cr.)** An introduction to the composition of visual information in regards to new media. Students will develop a visual style through digital and traditional methods to tell stories. Other topics covered include digital photography, framing, shot selection, camera movements, and time-based programs.

**NEWM-N 284 Building Physical Prototypes (3 cr.)** An examination of concept formation for multimedia technology, including current, emerging, and future devices and displays. Learn to build physical and digital prototypes to facilitate idea development and presentation. Students research ideas, develop prototypes, evaluate, and present results.

**NEWM-N 285 Interactive Design (3 cr.)** P: N101 Examination of issues related to interactivity, including the frameworks, models, and theories related to user interaction with new media products. Topics include user modeling, types of user interfaces, and interaction paradigms.

**NEWM-N 288 New Media Marketplace Innovation (3 cr.)** Through discussion, reading and writing, this course introduces students to the strategies needed to think outside the box and generate innovation in digital products and services, with an emphasis on existing or potential businesses and markets.

**NEWM-N 290 Creative Concept Development (3 cr.)** Exploration of creativity, ideation, and concept development. Students learn the processes of creative thinking, idea generation and development, and creative problem solving through specific theories, methodologies, and application in multimedia projects.

**NEWM-N 295 Career Enrichment Cooperative (3 cr.)** P: Junior standing. A semester of external career experiences designed to enrich the student’s preparedness for entering the workforce. Periodic meetings with faculty advisors and a comprehensive written report on the experience detailing the intern’s activities and reactions are required.

**NEWM-N 299 Directed Study (2 cr.)** This course applies design and visualization information towards the development of a comprehensive portfolio and resume. The development of the portfolio and resume will provide students with a framework for display of personal growth and achievement. Students will develop a portfolio and resume to be used for future career opportunities.
NEWM-N 300 Digital Media Production (3 cr.) P: N101, N102 Hands-on experience in taking a project through the typical product life-cycle, from initial contact to final acceptance. Topics include communicating with a client, cost estimation, product design, implementation, handling change requests, product documentation, acceptance testing, and post-process review.

NEWM-N 311 The Digital Paradigm Shift: Effects in International Cultures and Society (3 cr.) Examination of the digital paradigm shift and its global impact on cultures and societies. A study of major paradigm shifts in reference to culture and society as well as the implications for the future. Readings, lectures, class discussions.

NEWM-N 315 Online Document Development II (3 cr.) P: N215 Advanced creation, publication, and management of interactive publications for online distribution with the inclusion of emerging technologies for a media-rich experience. Topics include interactive Web site development, animations for the Web, online interactive design, document conversion, file exchanges, and digital media development for online usage.

NEWM-N 321 ActionScript in 3D (3 cr.) P: N222 Introduces skills for the design and development of interactive 3D applications for the Web and the desktop. Topics include 3D concepts, 3D code libraries, interactivity, system performance issues, and potential applications.

NEWM-N 322 Dynamic Data Applications (3 cr.) P: N222 Examines the techniques used in multimedia applications to communicate with back-end data and information services, and to create applications with runtime access to data, information, and media assets.

NEWM-N 328 Visualizing Information (3 cr.) P: N222 Exploration of techniques for using graphics and sound to present data and information. Topics include data types (including data that is geographical and/or time-varying), presentation techniques, effective use of design elements, and effective use of interactive media.

NEWM-N 330 Intermediate Game Design and Development (3 cr.) P: N230 Design and development of 3D games in the context of a 3D game engine. Topics include world creation, game space design, programming, design and modeling of characters and creatures, environmental animation, and playability testing.

NEWM-N 332 Sequential Narrative (3 cr.) P: N202 An introduction to the use of panel-to-panel and frame-to-frame sequential storytelling as foundational elements of animation and storytelling. Other topics covered include pre-visualization, storyboards, and character design.

NEWM-N 335 Character Modeling and Animation (3 cr.) P: N230 Intermediate course in designing characters, for a variety of applications. Topics include character modeling, locomotion, facial animation, and lip movement.

NEWM-N 340 Digital Video Production (3 cr.) P: N253 Video production techniques for digital media. Preproduction, production, and postproduction of digital video will be addressed and utilized for the completion of a short video project. Other topics covered include directing, editing, media optimization, and assembling assets.

NEWM-N 342 3D Animation (3 cr.) P: N243, N253 Introduction to 3D computer graphic animation for students interested in producing animations for product design, gaming, entertainment, marketing, training, and simulation. Topics include environment design, modeling, motion studies, camera movement, and composition.

NEWM-N 343 3D Modeling (3 cr.) P: N243, N342 and N253 Intermediate modeling course, aimed at achieving high-detail, professional quality 3D models for games, film, architecture, science, and other application areas. In-depth use of professional software packages. Possible topics include modeling high-resolution organic characters, modeling foliage and ornate structures, displacement mapping techniques.

NEWM-N 344 3D Production (3 cr.) P: N243, N342 and N343 Team-based course focusing on the creation of high-end, broadcast-quality animations. Team members demonstrate mastery of narrative, modeling, lighting, effects, rendering, and animation skills culminating in a final team project. Other topics include planning, preproduction, production, and postproduction.

NEWM-N 353 Intermediate Video (3 cr.) P: N253 Video production techniques for digital media. Preproduction, production, and postproduction of digital video will be addressed and utilized for the completion of a short video project. Other topics covered include directing, editing, media optimization, and assembling assets.

NEWM-N 355 Intermediate Sound (3 cr.) P: N255 Intermediate course in designing soundtracks and sound effects for various media applications. Topics include digital signal processing, digital sound techniques, sound recording using a variety of synthesizers and samplers, editing techniques, file formats and conversion techniques.

NEWM-N 356 Lighting and Field Production (3 cr.) P: N253 Theoretical and practical application of lighting, filming, and audio recording. Students will work in a variety of locations to encompass as many different environments as possible. Other topics covered include daytime shooting, nighttime shooting, studio shooting, and storytelling.

NEWM-N 357 Digital Effects (3 cr.) P: N253 Integration of computer-generated imagery and digital effects technique for video production. Students learn techniques for creating digital effects, shooting video for effects, and the use of effects to aid in storytelling. Other topics covered include programming/scripting, shooting raw footage, effects, and media integration.

NEWM-N 385 Seeing Sideways: Experimental Approaches to New Media (3 cr.) In this non-traditional open format course students will explore a variety of methods for fostering creative exploration in new media. Discussion, readings, blogging, and directed exercises lead the student to find individual ways of exploring different areas of new media through a variety of output options.

NEWM-N 399 Directed Study III (1 cr.) P: Junior standing or N299 This course applies design and visualization information towards the development of a comprehensive portfolio. The development of the portfolio will provide
students with a framework for display of personal growth and achievement. Students will develop a portfolio to be used for future career opportunities.

NEWM-N 400 Imaging and Digital Media Seminar (3 cr.) Variable titled course designed to bring guest speakers from the industry and other disciplines on campus to expose students to the wide realm of new media and how it can be utilized in each discipline. Class discussions, assigned readings, and research papers.

NEWM-N 410 History and Theory of Digital Media (3 cr.) Examines the history of computer-based media, technologies, and the digital information age. Topics include studying the historical components and developments, as well as present digital media and research speculation towards the future of digital media and technologies.

NEWM-N 413 Advanced Web (3 cr.) P: N315 A survey of advanced issues in Web site design, maintenance, and enhancement. Possible topics include Web analytics, clickstream analysis, ads and other revenue opportunities, payment systems, attracting visitors, and search engine optimization.

NEWM-N 420 Multimedia Project Development (3 cr.) P: (COMM-R 110 and ENG-W 131 and JOUR-J 200) or ENG-132 or TCM 220 and Senior standing. THIS IS A PRE-CAPSTONE COURSE. Project design in new media. Topics include product planning and design, hardware and software selection, cost estimation, timelines, project management tools, feasibility studies, prototyping, and product presentation. Students work individually or in small groups to develop a project plan suitable for a capstone experience.

NEWM-N 421 Physical Object Interfaces (3 cr.) P: N222 Exploration of the possibilities for interacting with computer applications through physical objects and other tangible media. Introduces the use of several sensor technologies to support interactivity, including cameras, proximity, contact, and RFID. Students design, build, and evaluate applications that address various scenarios.

NEWM-N 422 Advanced Interactive Production (3 cr.) P: N322 A project-based course emphasizing the design, implementation, and evaluation of interactive new media applications. Working individually and in teams, students create multiple products, evaluate the products, and evaluate their own production process.

NEWM-N 431 Game On! (3 cr.) An exploration of the evolution, concepts, and impact of video games. Examines the role of games in popular culture, as well as the impact on contemporary notions of interactivity, learning, and storytelling. Includes discussion of console and online games, casual games, Alternate Reality Games, serious games, and others.

NEWM-N 432 Advanced Sequential Narrative (3 cr.) P: N332 Advanced topics in the creation of sequential narrative using 2D animation. Topics include ideas of pacing, tempo, sequence, and synchronization of graphic and audio elements.

NEWM-N 438 Advanced 2D Animation (3 cr.) P: N238 The creation, development, and production of animation utilizing advanced methods of performance and movement. Possible topics include character and environment design, soundtrack, syncing, backgrounds and animation, and motion principles.

NEWM-N 440 DV and CGI Digital Effects (3 cr.) P: N 342 and N 343 Covering the integration of CGI and digital effects technique for video production. Students learn the techniques for creating digital effects, shooting video for effects, and the use of effects to aid in storytelling. Other topics covered include programming/scripting, shooting raw footage, effects and integrating all new media.

NEWM-N 442 Advanced 3D Animation Techniques (3 cr.) P: N342 Advanced techniques in computer animation, including character development and dynamics. Possible topics include story development, character facial animation and locomotion, dynamics, special effects, composites, fluid effects and particle systems.

NEWM-N 443 Advanced Lighting and Texturing (3 cr.) P: N243 Advanced course in creating 3D objects and environments with specialized texturing and lighting. Possible topics include an examination of state-of-the-art examples, reproduction of results, and production of individual portfolio-quality projects. Possible software includes use of Autodesk Maya, mental ray, Adobe Photoshop and Adobe AfterEffects.

NEWM-N 444 Stereoscopic Production and Display (3 cr.) P: N243 The production and display of stereoscopic imagery for various applications, including games, education, science, virtual reality, and marketing. Topics include human stereoscopic perception, types of stereoscopic displays, evolution of techniques, production issues for various types of stereoscopic media.

NEWM-N 450 Usability Principles for New Media Interfaces (3 cr.) P: N285 Examination of principles of human-computer interaction (HCI) and user experience modeling. Study of user-centered design, usability, and usability testing in the context of new media (hypermedia and multimedia). Topics include aesthetics, human factors, and cognitive psychology as related to user interfaces, navigation, and interactivity.

NEWM-N 453 Advanced Video (3 cr.) P: N353 Application of technical and critical-thinking skills towards understanding the genre of documentary films. Students review, discuss, and analyze several exemplar films, as well as do the research, planning, production, editing, post-production, and evaluation of a short high-quality documentary.

NEWM-N 455 Advanced Sound Design (3 cr.) Students design, record, and edit sound files, apply effects, and mix several audio projects using state of the art technology. Topics include acoustics, circuits, waveforms, digital signal processing (DSP), and studio design and equipment. Emphasis is on practical techniques for integrating sound with other media.

NEWM-N 465 Informatics for Social Change (3 cr.) This course focuses on the theory and practice of service learning at IUPUI. Students will apply the knowledge of their technology expertise area in a service project for the local, state or global community. Projects will be completed through students’ current and developing new media production, information technology, and client-based research skills.
NEWM-N 475 Research in Design Methods (3 cr.) This course is designed to give students an understanding of the advanced concepts of theoretical topics, simulation modeling, and analysis concepts. Investigate applications of simulation in systems characterized by probabilistic behavior.

NEWM-N 480 Technology and the Law (3 cr.) Provides students with a solid foundation on legal matters that impact new media and informatics, including intellectual property (copyright, patents, trademark, trade secrets), contracts, licensing, privacy, publicity, global legal issues, and professional ethics.

NEWM-N 485 Seminar in New Media (3 cr.)
P: Prerequisite varies by topic. Current trends, problems, best practices, and developments in new media. Students pursue a special interest and share information and experiences with the group. This course is an in-depth exploration of topics and issues at the forefront of new media. Seminar format with research papers and class discussion/presentations.

NEWM-N 490 Independent Study (1-6 cr.) Departmental consent required. Research and practical experience in various areas of new media as selected by the student prior to registration, outlined in consultation with the instructor and approved by the program advisor. Total credit of internship/independent study shall not exceed nine hours.

NEWM-N 495 Enrichment Internship (3 cr.) P: Junior standing. Completion of 9 credit hours of new media electives at the 300-400 level is required. Industry, corporate, or similar experience in new media-oriented employment. Projects jointly arranged, coordinated, and evaluated by faculty and industrial supervisors. Apply during the semester prior to desired internship. Total credit of internship/independent study shall not exceed nine hours.

NEWM-N 499 Capstone Experience (3 cr.) To be taken during the students' senior year. Departmental consent required. The capstone experience is the culmination of the student's major in both knowledge and abilities of a particular area of interest in new media. The successful execution, individually or as a team, integrates student's learning across the field.

Undergraduate Course Descriptions
General Education Courses
INFO-I 101 Introduction to Informatics (4 cr.) Problem solving with information technology; introductions to information representation, relational databases, system design, propositional logic, cutting-edge technologies: CPU, operation systems, networks, laboratory emphasizing information technology including web page design, word processing, databases, using tools available on campus.

This course is approved for the Analytical Reasoning component of the General Education core.

INFO-I 202 Social Informatics (3 cr.)
Introduction to key social research perspectives and literatures on the use of information and communication technologies. Discusses current topics such as information ethics, relevant legal frameworks, popular and controversial uses of technology (e.g. peer-to-peer file sharing), digital divides, etc. Outlines research methodologies for social informatics.

This course is approved for the Social Sciences component of the General Education core.

INFO-I 270 Introduction to Human-Computer Interaction Principles and Practices (3 cr.) Students learn the fundamental principles and practices of human-computer interaction (HCI) and evaluation. Specific focus is given to the introductory knowledge of HCI methods, tools, and techniques for designing and evaluating user interfaces through the use of low and high fidelity prototypes for the Web and software.

This course is approved for the Social Sciences component of the General Education core.

INFO-I 275 Introduction to Human-Computer Interaction Theory (3 cr.) Students will learn the fundamental theories of human-computer interaction (HCI) and user-centered design. This course is both a survey of HCI research and an introduction to the psychological, behavioral, and other social science knowledge and techniques relevant to the design of interactive and ubiquitous computing systems.

This course is approved for the Social Sciences component of the General Education core.

INFO-I 280 Foundations of New Media (3 cr.) An exploration of the characteristics of digital media, including interactivity, hypermedia, immersion, and storytelling. Includes an introduction to the practice, theory, and history of new media, from the viewpoint of technology, communication, and culture. There are readings, demonstrations, examples, hands-on projects, and written assignments.

This course is approved for the Arts and Humanities component of the General Education core.

NEWM-N 100 Foundations of New Media (3 cr.)
An exploration of the characteristics of digital media, including interactivity, hypermedia, immersion, and storytelling. Includes an introduction to the practice, theory, and history of new media, from the viewpoint of technology, communication, and culture. There are readings, demonstrations, examples, hands-on projects, and written assignments.

This course is approved for the Social Sciences component of the General Education core.

NEWM-N 201 Design Issues in Digital Media (3 cr.) Exploration of the traditional principles of visual design, as expressed in digital design tools and applied to digital media. Topics include visual literacy, fundamental design elements and design principles, and their expression in various tools for digital design. Hands-on practice with applying design principles in several projects.

This course is approved for the Arts and Humanities component of the General Education core.

Health Information Administration
HIA-M 110 Computer Concepts for Health Information (3 cr.) Course provides an overview of applications for the health and medical professionals. Topics include: audit trails, generating, quantifying and analyzing medical reports, word processing, computer hardware, medical software, copyright and fair usage. Students retrieve and present medical data.

HIA-M 210 Data Organization and Presentation in the Healthcare Environment (3 cr.) Students will study and apply problem solving, decision analysis and data presentation techniques used in healthcare data representation for both internal and external users. ICD
and CPT classification systems will be modeled and analyzed utilizing spreadsheets.

**HIA-M 220 Healthcare Decision Support (3 cr.)** This course provides an overview of essential information technology tools necessary for quantitative and qualitative decision making in a healthcare environment. Students will learn effective methods to analyze patient data including ICD and CPT classification systems as they relate to decision processes in a healthcare environment.

**HIA-M 270 Foundations and Principles of Health Information Management (2 cr.)** Course focuses on the administration of foundational principles of management within a health information department. Students will gain an understanding of the language of quantitative methods as well as the processes that are required for health information managers to function in a healthcare environment which demands competency in the areas of profit margins, management of financial resources and complex reimbursement processes.

**HIA-M 275 Effective Communication for the Healthcare Environment (3 cr.)** Course is designed to develop effective interaction among internal and external customers in a healthcare environment. Emphasis is placed on professional communications with superiors, peers and subordinates in all areas of healthcare. Topics include: policy creation, HIM job descriptions, information technology proposal requests, e-mail etiquette and presentation skills.

**HIA-M 300 Database Design for Health Information Administration (3 cr.)** Introduction to database design with an emphasis on managing data in the health information environment. Topics and concepts include creating data table relationships and normalization. Utilizing Microsoft Access to create user forms and reports. Students will be required to create a large group project.

**HIA-M 315 Quantitative Methods and Research (2 cr.)** This course will outline the procedures associated with vital statistics in health care (birth/death certificates). The student will learn about the statistics associated with health care. The research portion will focus on data search and access techniques, national research policy with health care. The research portion will focus on data search and access techniques, national research policy with health care. This course will cover pathophysiology and pharmacology associated with the body systems.

**HIA-M 322 Hospital Organization and Management (3 cr.)** Orientation to hospital departments hospital organization; inter- and intra-relationships of hospital and community agencies. Orientation to hospital departments hospital organization; inter- and intra-relationships of hospital and community agencies.

**HIA-M 325 Health Care Information Requirements and Standards I (3 cr.)** Course outlines the essential documents/data content required for maintaining legal health records using paper and electronic media. Federal, state and local law, accreditation standards and regulatory requirements for maintaining patient data examined. Documentation in acute care, psychiatric and other healthcare settings. Students begin to explore the health information management professions.

**HIA-M 326 Laboratory Enrichment for Healthcare Information Requirements and Standards I (1 cr.)** This course consists of exercises that reinforce the lectures in HIA-M 325. Students explore up-to-date Web resources used in the healthcare field as well as perform database searches. Students engage in laboratory exercises that consist of evaluating health records for completeness, regulatory compliance and documentation.

**HIA-M 327 Healthcare Information Requirements and Standards II (3 cr.)** This course is a continuation of HIA-M 325 and includes the ongoing review of health record documentation, in particular secondary data bases such as cancer registry, long term care and other healthcare settings. Healthcare information resources, both in print and on the World Wide Web are researched and examined extensively.

**HIA-M 328 Laboratory Enrichment for Healthcare Information Requirements and Standards II (1 cr.)** P: M325 This course consists of exercises that reinforce the lectures in HIA-M 327. Students explore Web resources used in the healthcare field and perform extensive database searches.

**HIA-M 330 Medical Terminology (3 cr.)** The purpose of this course is to further develop a student’s understanding and use of medical terminology. There is a focus on spelling and pronunciation, abbreviations, analyzing words based on their root, prefix or suffix as well as identifying common mistakes within medical terminology.

**HIA-M 350 Medical Science for Health Information I (3 cr.)** This course will cover pathophysiology and pharmacology associated with the body systems.

**HIA-M 355 ICD-9-CM Coding (3 cr.)** This course will focus on International Classification of Diseases (ICD) and coding. Students will learn how to code, index, and sequence diagnoses and procedures. Ethical coding guidelines will be taught.

**HIA-M 356 Laboratory Enrichment for ICD-9-CM Coding (1 cr.)** This course is a laboratory for HIA-M 355 that provides hands-on experience in assigning ICD-9-CM codes. Actual patient records are used for coding practice which focuses on correct code assignment and sequencing of codes to follow ethical coding guidelines. Students will also gain hands-on experience with electronic health records and coding software used in the HIM industry.

**HIA-M 370 Health information Management (3 cr.)** This course will focus on human resources management in a Health information Department. Work scheduling, work flow and work design will be discussed. Other issues in managing an HIM department will be addressed such as education and training, establishing productivity standards, developing a budget and managing contracts.

**HIA-M 375 Health information Technology (3 cr.)** Introduction to health information standards that have been developed for the electronic health record and information interoperability and standards in development. Emphasis on understanding healthcare organization networks, intranets, the role of the Internet in patient data access, differences between clinical and administrative information systems used in healthcare organizations and the management and maintenance of those systems.

**HIA-M 380 Seminar in Health Information Administration (1-3 cr.)** Allows the student to refine their skills in planning healthcare seminars for the profession,
systems. Onsite observations related to coding function medical records using both the ICD and CPT coding laboratory practicum focusing on the coding of complex medical Coding. Students will participate in a supervised is designed for students completing the Certificate in Course HIA-M 457 Practicum in Medical Coding (4 cr.) software used in the HIM industry. on experience with electronic health records and coding ethical coding guidelines. Students will also gain hands-code assignment and sequencing of codes to follow code are used for coding practice which focuses on correct reimbursement systems. It will allow the student to gain the knowledge of correct reimbursement systems and to identify issues and patient types in meeting medical necessity guidelines.

HIA-M 490 Directed Study (1 cr.) This course will reinforce the concepts taught throughout the semester in an independent study approach in order to review for the certification examination.

HIA-M 499 Capstone Experience (3 cr.) This final project will allow the student to synthesize all of the information learned throughout the professional program. Written research projects and oral presentations will test the student's integrated knowledge and abilities across the field.

Informatics INFO-I 100 First Year Experience (1 cr.) This course introduces specific survival skills for success in college and beyond, while reconciling personal learning skills with instructor-based teaching styles. Master the art of inquiry and elevate your sense of integrity while sharpening your personal edge by exploring critical thinking, project management and current/future job market trends. Required by all informatics and media arts and science majors.

INFO-I 101 Introduction to Informatics (4 cr.) Problem solving with information technology; introductions to information representation, relational databases, system design, propositional logic, cutting-edge technologies: CPU, operation systems, networks, laboratory emphasizing information technology including web page design, word processing, databases, using tools available on campus.

This course is approved for the Analytical Reasoning component of the General Education core.

INFO-I 112 Basic Tools of Informatics - Programming and Database Concepts (3 cr.) Introduction to programming and database design concepts. Emphasis on problem-solving and information gathering techniques. The lecture will discuss general concepts and syntax. The lab will focus on the use of software, including a programming language, modifying and accessing data using visual tools, and building database applications using forms and development tools.
INFO-I 130 Introduction to Cybersecurity (1 cr.) P: I101 C: I101 This course introduces students to Cybersecurity. The course will primarily focus on introduction to three core areas (technical aspects of security, organizational aspects of security, and legal aspects of security). Through examples of security problems in real life, this course will illuminate fundamental ideas and concepts of information security.

INFO-I 201 Mathematical Foundations of Informatics (4 cr.) An introduction to the suite of mathematical and logical tools used in information sciences, including finite mathematics, automata and computability theory, elementary probability and statistics, and basics of classical information theory. Cross listed with COGS Q250. Credit given for either INFO I201 or COGS Q250.

INFO-I 202 Social Informatics (3 cr.) Introduction to key social research perspectives and literatures on the use of information and communication technologies. Discusses current topics such as information ethics, relevant legal frameworks, popular and controversial uses of technology (e.g. peer-to-peer file sharing), digital divides, etc. Outlines research methodologies for social informatics.

This course is approved for the Social Sciences component of the General Education core.

INFO-I 210 Information Infrastructure I (4 cr.) The software architecture of information systems. Basic concepts of systems and applications programming.

INFO-I 211 Information Infrastructure II (4 cr.) P: INFO I210 The systems architecture of distributed applications. Advanced programming, including an introduction to the programming of graphical systems.

INFO-I 230 Analytical Foundations of Security (3 cr.) P: I130 This course will allow students to re-evaluate and conceptualize material learned in discrete courses to consider the topics from the perspective of security. For example, computer system basics such as hardware (CPU, memory, ...) and software are reconsidered from the perspective of how their interactions create vulnerabilities. Vulnerabilities that combine standard and new tools will be examined, as these illuminate both security and computer networks. Operating systems and file systems are examined from the perspective of access control, permissions and availability of system services, etc.

INFO-I 231 Introduction to the Mathematics of Cybersecurity (3 cr.) P: I130 C: I130 Introduces the basic mathematical tools used in modern cybersecurity. Covers mathematical material from a number of disparate fields, including probability theory, analysis of algorithms, complexity theory, number theory, and group theory.

INFO-I 270 Introduction to Human-Computer Interaction Principles and Practices (3 cr.) Students learn the fundamental principles and practices of human-computer interaction (HCI) and evaluation. Specific focus is given to the introductory knowledge of HCI methods, tools, and techniques for designing and evaluating user interfaces through the use of low and high fidelity prototypes for the Web and software.

This course is approved for the Social Sciences component of the General Education core.

INFO-I 275 Introduction to Human-Computer Interaction Theory (3 cr.) Students will learn the fundamental theories of human-computer interaction (HCI) and user-centered design. This course is both a survey of HCI research and an introduction to the psychological, behavioral, and other social science knowledge and techniques relevant to the design of interactive and ubiquitous computing systems.

This course is approved for the Social Sciences component of the General Education core.

INFO-I 300 Human-Computer Interaction (3 cr.) P: INFO I270 An intermediate course that teaches students how to assess the usability of software through quantitative and qualitative methods, including conducting task analyses, usability studies, heuristic inspections, interviews, surveys, and focus groups. The course also introduces students to the tool and techniques for designing and testing user interfaces based on a human-centered methodology.

INFO-I 303 Organizational Informatics (3 cr.) Examines the various needs, uses, and consequences of information in organizational contexts. Topics include organizational types and characteristics, functional areas and business processes, information-based products and services, the use of and redefining role of information technology, the changing character of work life and organizational practices, sociotechnical structures, and the rise and transformation of information-based industries. Credit given for either INFO I303 or SPEA V369.

INFO-I 305 Introduction to Research in Informatics (3 cr.) P: Sophomore standing This course presents a broad overview of research philosophy, designs and methods. Its focus is on social science research methods and the content is specifically tailored to reflect the rapidly emerging field of informatics. The course will include major methods that are the core of contemporary approaches to research in informatics.

INFO-I 308 Information Representation (3 cr.) The basic structure of information representation in digital information systems. It covers three modules: web development, relational databases, and XML technologies. Through this course, students are able to develop web pages that are able to interact with the backend servers; represent relational databases in the ER model, query the data using the formal query language SQL; and use XML technologies to store and display data.

INFO-I 310 Multimedia Arts and Technology (3 cr.) This course studies how the paradigm shift to a digital world will affect humanity. The course will consider the evolution of media arts and its underlying principles of communications. Students will study application development paradigms in current practice. Readings, lectures, class discussions, and research papers.

INFO-I 320 Distributed Systems and Collaborative Computing (3 cr.) P: INFO I211 An introductory treatment of distributed systems and programming. Topics range from the distributed and object models of computation to advanced concepts, such as remote method invocations,
object brokers, object services, open systems, and future trends for distributed information systems.

INFO-I 330 Legal and Social Informatics of Security (3 cr.) This course will examine that set of ethical and legal problems most tightly bound to the issues of information control. The interaction and technology changes, but the core issues have remained: privacy; intellectual property; Internet law; concepts of jurisdiction; speech anonymity versus accountability; and ethical decision-making in the network environment.

INFO-I 350 Foundations in Legal Informatics (3 cr.) This course examines the basic concepts of the design, evaluation and use of technology in the study and practice of law. The course provides an overview of the application of a variety of emerging informatics and new media technologies to the field of law. Will cover technology for law office management, legal research, litigation support, document management, imaging and animations, case management, and electronic court filing.

INFO-I 390 Current Topics in Informatics (1-3 cr.) Variable topic. Emphasis is on new developments and research in informatics. Can be repeated twice with different topic.

INFO-I 400 Topics in Informatics (1-3 cr.) P: at least junior standing, or permission of instructor. Variable topic. Emphasis is on new developments and research in informatics. Can be repeated twice for credit when topics vary, subject to approval of the dean.

INFO-I 402 Informatics Project Management (3 cr.) P: Sophomore standing. This course will focus on project management in an Informatics setting. Students will become conversant in the tools and techniques of project management, such as project selection methods, work breakdown structures, network diagrams, critical path analysis, critical chain scheduling, cost estimates, earned value management, motivation theory and team building.

INFO-I 410 Electronic Discovery (3 cr.) This course will cover the legal, ethical, financial, logistical, procedural and technological considerations of electronic discovery and its implications for lawyers and their clients. It will highlight recently revised federal and state rules, new state and federal legislation and recent court cases that impact electronic discovery policies and processes. We will also consider electronic discovery from the point of view of a corporation that has to prepare for – and then respond to – requests for the production of digital evidence.

INFO-I 421 Applications of Data Mining (3 cr.) P: INFO-I 211 This course explores the use of data mining techniques in different settings, including business and scientific domains. The emphasis will be on using techniques, instead of developing new techniques or algorithms. Students will select, prepare, visualize, analyze, and present data that leads to the discovery of novel and usable information.

INFO-I 425 Applying Web Services in Information Systems (3 cr.) P: INFO-I 211 and INFO-I 308 This course examines how cloud computing and service-oriented architecture contribute to solutions for Informatics problems in areas such as business, health care, and life sciences. Students will develop an understanding of why, when, and how organizations utilize Web services to manage data, as well as the skills to design, implement, and deploy Web services applications.

INFO-I 430 Security for Networked Systems (3 cr.) P: INFO-I 211 and INFO-I 308 An extensive survey of network security. Covers threats to information confidentiality, integrity, and availability in different Internet layers, and defense mechanisms which control these threats. Also provides a necessary foundation on network security, such as cryptographic primitives/protocols, authentication, authorization, and access control technologies. Hands-on experiences through programming assignments and course projects.

INFO-I 433 Protocol Design and Analysis (3 cr.) Covers the fundamentals of computer security by looking at how things can go wrong, how people can abuse the system, and ways to make the system secure. Students will gain a basic overview of existing security problems and be introduced to methods for addressing such problems. Should be taken by anyone designing, selecting, or using applications in which security or privacy plays a role.

INFO-I 441 Interaction Design Practice (3 cr.) Human-computer interaction design (HCID) describes the way a person or group accomplishes tasks with a computer – what the individual or group does and how the computer responds; what the computer does and how the individual or group responds. This course will be organized a collection of readings and three design projects applying human-computer interaction design principles to the design, selection, and evaluation of interactive systems.

INFO-I 445 Competitive Intelligence for Informatics (3 cr.) This course will focus on the basic principles, techniques and methods of competitive analysis, the types of competitive analysis systems and their applications, traditional and new sources of information about competitors and industries, the nature of business information and its lifecycle, the ethical issues of competitive analysis and the application of competitive intelligence to real-world scenarios.

INFO-I 447 Computer and Information Ethics (3 cr.) P: Sophomore standing. Ethical and professional issues that arise in the context of designing and using networked information technologies and information resources. Examines frameworks for making ethical decisions, emergent technologies and their ethical implications, information/computer professionalism. Topics include privacy, intellectual property, cybersecurity, games, social justice, and codes of professional ethics.

INFO-I 465 Informatics for Social Change (3 cr.) This course focuses on the theory and practice of service learning at IUPUI. Students will apply the knowledge of their expertise area in a service project for the local or global community. Projects will be completed through students’ current and developing new media production, information technology, and client-based research skills.
INFO-I 470 Litigation Support Systems and Courtroom Presentations (3 cr.) Provide students with an opportunity to use specialized software that is available for organizing, managing, retrieving, and presenting documents and evidence in a legal matter. Students will gain hands-on experience with software tools and learn what is effective and allowable from a technical, legal and ethical standpoint.

INFO-I 475 Informatics in Sports (3 cr.) Technology applications are changing the sports world in biomechanics, sports advancement and injury prevention, equipment, entertainment, gaming, and journalism. The approach of this course is to delineate what digital technologies are progressing the sporting field most and changing the way we view athletics.

INFO-I 480 Experience Design and Evaluation of Ubiquitous Computing (3 cr.) The course focuses on ubiquitous computing and related interface/system design, and user-experience issues. Applications include interactive systems which support natural/gesture/touch-based interactions on devices such as mobile, extra-small-and-large displays, and other non-traditional pervasive technologies. Projects include interaction and evaluative techniques: field observation, contextual inquiry, ethnography, survey/interviews, and cognitive walkthrough.

INFO-I 490 Internship in Informatics Professional Practice (3-6 cr.) P: approval of dean and completion of 100- and 200- level requirements in informatics Students gain professional work experience in an industry or research organization setting, using skills and knowledge acquired in informatics course work.

INFO-I 491 Capstone Project Internship (1-6 cr.) P: Consent of instructor Students culminate their course studies through practical application of concepts and practices working in industry. Course requires prior authorization and approval of internship through the Career Services Office. Required coursework is completed via Oncourse.

INFO-I 492 Senior Thesis (3 cr.) P: Consent of instructor The senior student prepares and presents a thesis: a substantial, typically multi-chapter, paper based on a well-planned research or scholarly project, as determined by the student and a sponsoring faculty member.

INFO-I 493 Senior Thesis (3 cr.) P: Consent of instructor The senior student prepares and presents a thesis: a substantial, typically multichapter paper based on a well-planned research or scholarly project, as determined by the student and a sponsoring faculty member.

INFO-I 494 Design and Development of an Information System (3 cr.) P: Consent of instructor System design and development present both technical and managerial problems with which students will be familiar from their undergraduate course work. This course puts these lessons into practice as students work in teams to develop an information system. Examples of course projects include design and development of a database for a business or academic application, preparation and presentation of an interactive media performance or exhibit, or design and implementation of a simulated environment (virtual reality).

INFO-I 495 Design and Development of an Information System (3 cr.) P: Consent of instructor System design and development present both technical and managerial problems with which students will be familiar from their undergraduate course work. This course puts these lessons into practice as students work in teams to develop an information system. Examples of course projects include design and development of a database for a business or academic application, preparation and presentation of an interactive media performance or exhibit, or design and implementation of a simulated environment (virtual reality).

INFO-I 499 Readings and Research in Informatics (1-3 cr.) P: consent of instructor and completion of 100- and 200- level requirements in informatics Independent readings and research related to a topic of special interest to the student. Written report required.

NEWM-N 221 Media Applications I (3 cr.) P: NEWM N101 or INFO 1101 Introduces concepts and skills related to the design of interactive multimedia applications for the Web, the desktop, and mobile devices. Within the context of industry-standard application design tools, students use markup tags and scripting to create applications that emphasize graphics, animation, sounds, and interactivity.

NEWM-N 222 Media Applications II (3 cr.) P: NEWM N221 Introduces intermediate concepts and skills related to the design of interactive multimedia applications for the Web, the desktop, and mobile devices. Within the context of industry-standard application design tools, students use information modeling, markup tags, and scripting to create applications that emphasize graphics, animation, sounds, and interactivity.

NEWM-N 299 Directed Study (2 cr.) This course applies design and visualization information towards the development of a comprehensive portfolio and resume. The development of the portfolio and resume will provide students with a framework for display of personal growth and achievement. Students will develop a portfolio and resume to be used for future career opportunities.

INFO-Y 395 Career Development for Informatics Majors (1 cr.) Develops skills and knowledge that enable the student to successfully pursue the career search both at the time of graduation and later as the student progresses through their career. The course covers techniques and strategies which make the job search more efficient and effective.

Library and Information Science
SLIS-S 401 Computer-based Information Tools (3 cr.) Graded S/F. This skills-based course introduces basic applications that will be used throughout the student's course work and beyond. Students' experiences in this course should be seen as a basis for further skill development and learning throughout their careers. The course covers computing platforms, access tools, and management tools. Demonstration of skills will be by a mastery test or an assignment in each unit of the course. S401 does not count toward graduate degree requirements.

New Media
NEWM-N 100 Foundations of New Media (3 cr.) An exploration of the characteristics of digital media, including interactivity, hypermedia, immersion, and
storytelling. Includes an introduction to the practice, theory, and history of new media, from the viewpoint of technology, communication, and culture. There are readings, demonstrations, examples, hands-on projects, and written assignments.

This course is approved for the Arts and Humanities component of the General Education core.

NEWM-N 101 Multimedia Authoring Tools (3 cr.) A hands-on introduction to some of the fundamental tools used in industry to produce interactive media-rich Web pages. Case studies of sites that incorporate text, sounds, graphics, animations, and interactivity. Other topics include the design, development, and deployment of a personal Web site.

NEWM-N 102 Digital Media Imagery (3 cr.) A hands-on introduction to the basic tools used in industry for the creation, editing, manipulation, and uses of 2D raster and vector graphics. Other topics include the integration of imagery into a personal Web site.

NEWM-N 175 Digital Media I: Vector Imaging (3 cr.) P: N101 Vector graphics are produced using traditional visualization (sketches) and computer methods. Color theory, geometric construction, perspective, and rendering techniques are utilized in vector-based graphic creation for use in new media applications.

NEWM-N 180 Digital Media II: Raster Imaging (3 cr.) P: N101 Raster graphics are produced using traditional visualization (sketches) and computer methods. Topics will include image composition, realistic representation, digital imaging for new media, color mode and pallet usage, material, and value representation.

NEWM-N 190 Topics in Interactive Media (1-3 cr.) Special topics in interactive media, with a focus on exploring concepts at the forefront of media arts.

NEWM-N 199 Directed Study I (1 cr.) This course introduces the new media student to the current job market and will provide instruction on the development of job promotional material. Students will explore various new media careers in business, education, entertainment, science, and other related fields.

NEWM-N 200 Desktop Tools for Digital Media (3 cr.) A hands-on survey of the wide variety of tools used in creating multimedia animation, video, sound, and digital effects.

NEWM-N 201 Design Issues in Digital Media (3 cr.) Exploration of the traditional principles of visual design, as expressed in digital design tools and applied to digital media. Topics include visual literacy, fundamental design elements and design principles, and their expression in various tools for digital design. Hands-on practice with applying design principles in several projects.

This course is approved for the Arts and Humanities component of the General Education core.

NEWM-N 202 Digital Storytelling (3 cr.) P: N100 Examination of the principles of storytelling across a range of digital media formats, with attention to techniques for creating story-rich projects. Explores the role of agency, interactivity, story structure, and narrative, as well as the opportunities and challenges raised by emerging interactive and transmedia approaches to story-rich projects.

NEWM-N 204 Introduction to Interactive Media (3 cr.) The creation of interactive multimedia products for multi-platform delivery. Topics include the multimedia production process, audience analysis, hardware and software requirements, authoring tools, scripting, content development, interface design, distribution, and development strategies. Concentration will be on real-world applications for interactive multimedia.

NEWM-N 210 Introduction to Digital Sound (3 cr.) P: N101 An introduction to digital sound creation and editing. Topics will focus on analog sound techniques and equipment, analog-to-digital conversion, basic editing, formats and conversions, digital-to-analog conversion, and basic sound effect techniques for new media.

NEWM-N 215 Online Document Development (3 cr.) P: N101, N102 Study of the creation, publication, and management of documents, images, and other media types on the Web. Topics include Web publishing, asset preparation, document types, contemporary content management systems and their use in the organization. Hands-on experience with contemporary systems for content management.

NEWM-N 221 Media Applications I (3 cr.) P: NEWM N101 or INFO I101 Introduces concepts and skills related to the design of interactive multimedia applications for the Web, the desktop, and mobile devices. Within the context of industry-standard application design tools, students use markup tags and scripting to create applications that emphasize graphics, animation, sounds, and interactivity.

NEWM-N 222 Media Applications II (3 cr.) P: N221 Introduces intermediate concepts and skills related to the design of interactive multimedia applications for the Web, the desktop, and mobile devices. Within the context of industry-standard application design tools, students use information modeling, markup tags, and scripting to create applications that emphasize graphics, animation, sounds, and interactivity.

NEWM-N 230 Introduction to Game Design and Development (3 cr.) P: N221 Introduction to designing and developing games, examining the role that games play in daily life, and analyzing the impact of games in popular culture. Additional topics include world creation, game space design, programming 2D games, character and creature design, animation, and playability testing.

NEWM-N 238 2D Animation (3 cr.) P: N101 Introduction to traditional techniques for 2D animation, and their application in digital media. An exploration of the 12 principles of animation and how to use them to create effective animations.

NEWM-N 241 Stop Motion Animation (3 cr.) Through lecture and hands-on practice, this class studies the production techniques of stop action animation. Topics include the study of pioneers in the field, evolution from analog to digital techniques, and the building of sets and characters. Students will produce a series of short frame-by-frame digital animations.

NEWM-N 243 Introduction to 3D (3 cr.) An introduction to the concepts and production process of 3D graphics
and animation. Students learn basic techniques and theories related to modeling, texturing, lighting, animation, and rendering. Students produce animated graphics and text within the context of various projects.

NEWM-N 250 Team Building in Technology (3 cr.) P: N202. Practical introduction to working in groups of three or more people. Topics include the interpersonal process, decision-making styles, the creative effort, problem-solving, conflict resolution, leadership, and assessment techniques.

NEWM-N 253 Introduction to Digital Video (3 cr.) Introduction to video production techniques for digital media. Hardware, software, and technique are explored through lecture and projects. All phases of video production are addressed, from pre-production through production to post-production with a focus on the digital media aspects.

NEWM-N 255 Introduction to Digital Sound (3 cr.) Introduction to role and function of sound in interactive media. Concepts, theory, and practice related to audio, including voice, music, and sound effects. Effective listening skills, and understanding how people listen and comprehend sound. Experience with tools and techniques for recording, editing, and reproduction.

NEWM-N 256 Digital Composition (3 cr.) P: N102 An introduction to digital cameras and the principles of photographic composition for multimedia. Topics include shot selection, framing, camera movements, and time-based effects, as well as the use of photographs in storytelling.

NEWM-N 260 Scriptwriting (3 cr.) P: N202 An introduction to writing for new media. Concentrating on developing ideas, concepts, plans and stories, students will generate scripts and analysis for numerous new media projects. Other topics covered include writing for scripts, grants, storyboards, and advertising and marketing plans.

NEWM-N 261 Storyboarding for Multimedia (3 cr.) P: N101, N102 Introduction to story and production planning through traditional and digital techniques. Topics include the development of roughs, storyboards, and animatics as planning devices for digital storytelling and other new media products.

NEWM-N 265 Sound Composition (3 cr.) An introduction to digital sound creation and editing. Concentrating on sound effects, voiceover, and composition, students will generate sound for various new media projects. Other topics covered include recording, formatting, effects, editing, and conversion.

NEWM-N 270 Visual Composition (3 cr.) An introduction to the composition of visual information in regards to new media. Students will develop a visual style through digital and traditional methods to tell stories. Other topics covered include digital photography, framing, shot selection, camera movements, and time-based programs.

NEWM-N 284 Building Physical Prototypes (3 cr.) An examination of concept formation for multimedia technology, including current, emerging, and future devices and displays. Learn to build physical and digital prototypes to facilitate idea development and presentation. Students research ideas, develop prototypes, evaluate, and present results.

NEWM-N 285 Interactive Design (3 cr.) P: N101 Examination of issues related to interactivity, including the frameworks, models, and theories related to user interaction with new media products. Topics include user modeling, types of user interfaces, and interaction paradigms.

NEWM-N 288 New Media Marketplace Innovation (3 cr.) Through discussion, reading and writing, this course introduces students to the strategies needed to think outside the box and generate innovation in digital products and services, with an emphasis on existing or potential businesses and markets.

NEWM-N 290 Creative Concept Development (3 cr.) Exploration of creativity, ideation, and concept development. Students learn the processes of creative thinking, idea generation and development, and creative problem solving through specific theories, methodologies, and application in multimedia projects.

NEWM-N 295 Career Enrichment Cooperative (3 cr.) P: N175 and N180; sophomore standing and approval of the dean. A semester of external career experiences designed to enrich the student's preparedness for entering the workforce. Periodic meetings with faculty advisors and a comprehensive written report on the experience detailing the intern's activities and reactions are required.

NEWM-N 299 Directed Study (2 cr.) This course applies design and visualization information towards the development of a comprehensive portfolio and resume. The development of the portfolio and resume will provide students with a framework for display of personal growth and achievement. Students will develop a portfolio and resume to be used for future career opportunities.

NEWM-N 300 Digital Media Production (3 cr.) P: N101, N102 Hands-on experience in taking a project through the typical product life-cycle, from initial contact to final acceptance. Topics include communicating with a client, cost estimation, product design, implementation, handling change requests, product documentation, acceptance testing, and post-process review.

NEWM-N 311 The Digital Paradigm Shift: Effects in International Cultures and Society (3 cr.) Examination of the digital paradigm shift and its global impact on cultures and societies. A study of major paradigm shifts in reference to culture and society as well as the implications for the future. Readings, lectures, class discussions.

NEWM-N 315 Online Document Development II (3 cr.) P: N215 Advanced creation, publication, and management of interactive publications for online distribution with the inclusion of emerging technologies for a media-rich experience. Topics include interactive Web site development, animations for the Web, online interactive design, document conversion, file exchanges, and digital media development for online usage.

NEWM-N 321 ActionScript in 3D (3 cr.) P: N222 Introduces skills for the design and development of interactive 3D applications for the Web and the desktop. Topics include 3D concepts, 3D code libraries,
preproduction, production, and postproduction of digital video production techniques for digital media.

NEWM-N 322 Dynamic Data Applications (3 cr.) P: N222 Examines the techniques used in multimedia applications to communicate with back-end data and information services, and to create applications with runtime access to data, information, and media assets.

NEWM-N 328 Visualizing Information (3 cr.) P: N222 Exploration of techniques for using graphics and sound to present data and information. Topics include data types (including data that is geographical and/or time-varying), presentation techniques, effective use of design elements, and effective use of interactive media.

NEWM-N 330 Intermediate Game Design and Development (3 cr.) P: N230 Design and development of 3D games in the context of a 3D game engine. Topics include world creation, game space design, programming, design and modeling of characters and creatures, environmental animation, and playability testing.

NEWM-N 332 Sequential Narrative (3 cr.) P: N202 An introduction to the use of panel-to-panel and frame-to-frame sequential storytelling as foundational elements of animation and storytelling. Other topics covered include pre-visualization, storyboards, and character design.

NEWM-N 335 Character Modeling and Animation (3 cr.) P: N230 Intermediate course in designing characters, for a variety of applications. Topics include character modeling, locomotion, facial animation, and lip movement.

NEWM-N 340 Digital Video Production (3 cr.) P: N253 Video production techniques for digital media. Preproduction, production, and postproduction of digital video will be addressed and utilized for the completion of a short video project. Other topics covered include directing, editing, media optimization, and assembling assets.

NEWM-N 342 3D Animation (3 cr.) P: N243 Introduction to 3D computer graphic animation for students interested in producing animations for product design, gaming, entertainment, marketing, training, and simulation. Topics include environment design, modeling, motion studies, camera movement, and composition.

NEWM-N 343 3D Modeling (3 cr.) P: N243 Intermediate modeling course, aimed at achieving high-detail, professional quality 3D models for games, film, architecture, science, and other application areas. In-depth use of professional software packages. Possible topics include modeling high-resolution organic characters, modeling foliage and ornate structures, displacement mapping techniques.

NEWM-N 344 3D Production (3 cr.) P: N243, N342 and N343 Team-based course focusing on the creation of high-end, broadcast-quality animations. Team members demonstrate mastery of narrative, modeling, lighting, effects, rendering, and animation skills culminating in a final team project. Other topics include planning, preproduction, production, and postproduction.

NEWM-N 353 Intermediate Video (3 cr.) P: N253 Video production techniques for digital media. Preproduction, production, and postproduction of digital video will be addressed and utilized for the completion of a short video project. Other topics covered include directing, editing, media optimization, and assembling assets.

NEWM-N 355 Intermediate Sound (3 cr.) P: N255 Intermediate course in designing soundtracks and sound effects for various media applications. Topics include digital signal processing, digital sound techniques, sound recording using a variety of synthesizers and samplers, editing techniques, file formats and conversion techniques.

NEWM-N 356 Lighting and Field Production (3 cr.) P: N253 Theoretical and practical application of lighting, filming, and audio recording. Students will work in a variety of locations to encompass as many different environments as possible. Other topics covered include daytime shooting, nighttime shooting, studio shooting, and storytelling.

NEWM-N 357 Digital Effects (3 cr.) P: N253 Integration of computer-generated imagery and digital effects technique for video production. Students learn techniques for creating digital effects, shooting video for effects, and the use of effects to aid in storytelling. Other topics covered include programming/scripting, shooting raw footage, effects, and media integration.

NEWM-N 385 Seeing Sideways: Experimental Approaches to New Media (3 cr.) In this non-traditional open format course students will explore a variety of methods for fostering creative exploration in new media. Discussion, readings, blogging, and directed exercises lead the student to find individual ways of exploring different areas of new media through a variety of output options.

NEWM-N 399 Directed Study III (1 cr.) P: Junior standing or N299 This course applies design and visualization information towards the development of a comprehensive portfolio. The development of the portfolio will provide students with a framework for display of personal growth and achievement. Students will develop a portfolio to be used for future career opportunities.

NEWM-N 400 Imaging and Digital Media Seminar (3 cr.) Variable titled course designed to bring guest speakers from the industry and other disciplines on campus to expose students to the wide realm of new media and how it can be utilized in each discipline. Class discussions, assigned readings, and research papers.

NEWM-N 410 History and Theory of Digital Media (3 cr.) Examines the history of computer-based media, technologies, and the digital information age. Topics include studying the historical components and developments, as well as present digital media and research speculation towards the future of digital media and technologies.

NEWM-N 413 Advanced Web (3 cr.) P: N315 A survey of advanced issues in Web site design, maintenance, and enhancement. Possible topics include Web analytics, clickstream analysis, ads and other revenue opportunities, payment systems, attracting visitors, and search engine optimization.

NEWM-N 420 Multimedia Project Development (3 cr.) P: (COMM-R 110 and ENGW-131 and JOUR-J 200) or ENGW-132 or TCM 220 and Senior standing. THIS IS A
PRE-CAPSTONE COURSE. Project design in new media. Topics include product planning and design, hardware and software selection, cost estimation, timelines, project management tools, feasibility studies, prototyping, and product presentation. Students work individually or in small groups to develop a project plan suitable for a capstone experience.

NEWM-N 421 Physical Object Interfaces (3 cr.) P: N222 Exploration of the possibilities for interacting with computer applications through physical objects and other tangible media. Introduces the use of several sensor technologies to support interactivity, including cameras, proximity, contact, and RFID. Students design, build, and evaluate applications that address various scenarios.

NEWM-N 422 Advanced Interactive Production (3 cr.) P: N322 A project-based course emphasizing the design, implementation, and evaluation of interactive new media applications. Working individually and in teams, students create multiple products, evaluate the products, and evaluate their own production process.

NEWM-N 431 Game On! (3 cr.) An exploration of the evolution, concepts, and impact of video games. Examines the role of games in popular culture, as well as the impact on contemporary notions of interactivity, learning, and storytelling. Includes discussion of console and online games, casual games, Alternate Reality Games, serious games, and others.

NEWM-N 432 Advanced Sequential Narrative (3 cr.) P: N332 Advanced topics in the creation of sequential narrative using 2D animation. Topics include ideas of pacing, tempo, sequence, and synchronization of graphic and audio elements.

NEWM-N 438 Advanced 2D Animation (3 cr.) P: N238 The creation, development, and production of animation utilizing advanced methods of performance and movement. Possible topics include character and environment design, soundtrack, syncing, backgrounds and animation, and motion principles.

NEWM-N 440 DV and CGI Digital Effects (3 cr.) P: N 342 and N 343 Covering the integration of CGI and digital effects technique for video production. Students learn the techniques for creating digital effects, shooting video for effects, and the use of effects to aid in storytelling. Other topics covered include programming/scripting, shooting raw footage, effects and integrating all new media.

NEWM-N 442 Advanced 3D Animation Techniques (3 cr.) P: N342 Advanced techniques in computer animation, including character development and dynamics. Possible topics include story development, character facial animation and locomotion, dynamics, special effects, composites, fluid effects and particle systems.

NEWM-N 443 Advanced Lighting and Texturing (3 cr.) P: N243 Advanced course in creating 3D objects and environments with specialized texturing and lighting. Possible topics include an examination of state-of-the-art examples, reproduction of results, and production of individual portfolio-quality projects. Possible software includes use of Autodesk Maya, mental ray, Adobe Photoshop and Adobe AfterEffects.

NEWM-N 444 Stereoscopic Production and Display (3 cr.) P: N243 The production and display of stereoscopic imagery for various applications, including games, education, science, virtual reality, and marketing. Topics include human stereoscopic perception, types of stereoscopic displays, evolution of techniques, production issues for various types of stereoscopic media.

NEWM-N 450 Usability Principles for New Media Interfaces (3 cr.) P: N285 Examination of principles of human-computer interaction (HCI) and user experience modeling. Study of user-centered design, usability, and usability testing in the context of new media (hypermedia and multimedia). Topics include aesthetics, human factors, and cognitive psychology as related to user interfaces, navigation, and interactivity.

NEWM-N 453 Advanced Video (3 cr.) P: N353 Application of technical and critical-thinking skills towards understanding the genre of documentary films. Students review, discuss, and analyze several exemplar films, as well as do the research, planning, production, editing, post-production, and evaluation of a short high-quality documentary.

NEWM-N 455 Advanced Sound Design (3 cr.) Students design, record, and edit sound files, apply effects, and mix several audio projects using state of the art technology. Topics include acoustics, circuits, waveforms, digital signal processing (DSP), and studio design and equipment. Emphasis is on practical techniques for integrating sound with other media.

NEWM-N 465 Informatics for Social Change (3 cr.) This course focuses on the theory and practice of service learning at IUPUI. Students will apply the knowledge of their technology expertise area in a service project for the local, state or global community. Projects will be completed through students’ current and developing new media production, information technology, and client-based research skills.

NEWM-N 475 Research in Design Methods (3 cr.) This course is designed to give students an understanding of the advanced concepts of theoretical topics, simulation modeling, and analysis concepts. Investigate applications of simulation in systems characterized by probabilistic behavior.

NEWM-N 480 Technology and the Law (3 cr.) Provides students with a solid foundation on legal matters that impact new media and informatics, including intellectual property (copyright, patents, trademark, trade secrets), contracts, licensing, privacy, publicity, global legal issues, and professional ethics.

NEWM-N 485 Seminar in New Media (3 cr.) P: Prerequisite varies by topic. Current trends, problems, best practices, and developments in new media. Students pursue a special interest and share information and experiences with the group. This course is an in-depth exploration of topics and issues at the forefront of new media. Seminar format with research papers and class discussion/presentations.

NEWM-N 490 Independent Study (1-6 cr.) Departmental consent required. Research and practical experience in various areas of new media as selected by the student prior to registration, outlined in consultation with the
instructor and approved by the program advisor. Total
credit of internship/independent study shall not exceed
nine hours.

**NEWM-N 495 Enrichment Internship (3 cr.)** P: Junior
standing. Completion of 9 credit hours of new media
electives at the 300-400 level is required. Industry,
corporate, or similar experience in new media-oriented
employment. Projects jointly arranged, coordinated, and
evaluated by faculty and industrial supervisors. Apply
during the semester prior to desired internship. Total credit
of internship/independent study shall not exceed nine
hours.

**NEWM-N 499 Capstone Experience (3 cr.)** To be taken
during the students’ senior year. Departmental consent
required. The capstone experience is the culmination of
the student’s major in both knowledge and abilities of a
particular area of interest in new media. The successful
execution, individually or as a team, integrates student’s
learning across the field.
